: (what translates groff's output into TTY,ps or other forms)

DVI files (TeX output) can be translated into PostScript as well; in
fact, that's how a lot are printed. And, as a plus, TeX doesn't look
nearly as arcane and mystic as the nroff format does. I'd think that
converting MTA into nroff format would be a bigger project that the
original MTA (No, I'm not joking).

Daniel,
So what's so bad about Winword? Fine, Word for DOS. This is getting
old now. Scan it in, present it in as many formats as possible and
enjoy. If it's not in a format you need to use, get a copy ina a format
that can be converted at your end to the format you like. This
shouldn't be so difficult. Sheesh...

> The Doctor
Daniel,
Not a problem, really. He was looking to do something timer
critical and the jiffy counter isn't meant for that kind of timing
compared to normal life. 1/59.92334 sec doesn't cut it when you really
need 1/60 sec counting. Runs too fast.

Absolutely yes. The atari has 4 timers, running with (as far as I can
remeber) up to 1/8 of the cpu clock rate. That is VERY accurate. I have
to look up the details in a book. Basically, it is very easy. Just some
pokeing around.

The there is also the 50/60 Hz timer, controlled by the VBI.

3156. 800 OS Rom pinout

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-17 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <544om9$78c@freenet-news.carleton.ca>
Source record: 79458

Anyone have the pinout for the 2 8k os roms on the 800 os board? They dont appear to be any kind of eprom compatible rom my reader can recognise.

I'm not looking for rom images, I need the pinout to create a new rom for the real 800.

Thanks

Steve

Eric,
If that's the case, then the jiffy counter would probably be fine.
You could do such controlls from BASIC. You beed to read the juffy
counter locations at 18, 19 and 20. 20 is the fastest counter the 1/60
sec counter (aprox). It counts to 255 then updates 19. When 19 reaches
255 it then updates 18. By poking eack location with 0, you reset the
counter. This is only a counter, not time. you have to convert the data
to time. I have a BASIC and BASIC XL program that uses the jiffy
counter as a sort-of binary display clock. I will e-mail you a copy to
look over.
You'll also need to control the joystick port pins for event on/off
output. Check Mapping the Atari for more info on these items. Then once
you can control the joystick output and read the jiffy counter, all you
need to do is use if/then lines to tell the port to do something when
the counter = some predefined number. Pretty easy, as far as the
computer side goes.
The joystick port drops to 0v when the event occurs, so you need
TTL logic external to the computer to do the real off/on switching.

I have just added 38 Nintendo-64 and 95 Sega Genesis game screen
shots to my WWW site. This brings the total number of ORIGINAL screen
shots on-line to 1143, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel
Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally
Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore
Vic-20 computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES,
SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis and Nintendo 64.

More will be added as I have time. Eventually, I will have my entire
collection on-line (hopefully before the turn of the century :)

The Sega CD / Sega 32X, CD-i and Atari Jaguar are probably
next in line.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T
lists, it isn't FS/T :)

> just goes black.

Here's another approach:

Ian Chadwick's "Mapping The Atari- Revised Edition" has
the shortest possible test for the presence of the GTIA:

In BASIC, type POKE 623,64 [RETURN] and if the screen
blackens, you have the GTIA chip.

3165. Hardware Timing Question

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-17 00:00:00 UTC
From: Barry Gordon <bgordon@ecst.csuchico.edu>
Message-ID: <Pine.HPP.3.95.961017121247.26517A-100000@pathogen.ecst.csuchico.edu>
Source record: 79467

I tried posting this to a free-access Usenet server last night, but apparently it didn't go out. But if you see a duplicate appear in the near future, you'll know why.

Anyhow, I'm designing a little add-in circuit for my 130XE and one of the outputs will tie to the Reset line coming from the keyboard. What I need to know is how long the Reset line needs to be pulled low in order to guarantee a stable reset of the computer.

Does anybody (Bob? Are you reading this, Bob?) know the timing specs for the 130XE? I know it's different from the XL. As I recall, on the XL you can hold the RESET button down and the computer will "hang" until you release the button, upon which the reset cycle will be completed. However, if I remember correctly, on the 130XE, if you hold the RESET button down, you will get a full reset cycle. Releasing the button will then perform a second reset cycle.

Anyone have any input on this?

3166. Re: "Graphix AT" - What is it?

Message-ID: <5462em$lqp@sjx-ixn2.ix.netcom.com>
Source record: 79468

With it was a strange box called the "Graphix AT". It
>is a black box manufactured by a company called "xetec". It has a
cable
>coming out of it that ends in a standard Atari 8-bit connector. At
the
>bottom of the box (the box is sized/shaped like a cartridge of some
>sort) is a male parallel port connector (that's what it looks like).
On
>the box itself is a set of 8 switches.
>
>What in the world is this? Is it of any use to anyone?

It is a printer interface - a rather useful unit since it can be set to
CR/LF in hardware. You often need to do that on laser printers and
such! Don't throw it away....
Bob

They actually made a Return of the Jedi game for the 8-bit? Is this
anything like the arcade Rerun of the Jedi(i.e. vector type graphics
like the first Star Wars)?

3168. Wanted Chess Program for Atari

Remember, the 400/800 had nothing in $C000-CFFF - 4k wasted space that
Omnimon filled rather nicely. But I stand corrected; two 4k ROMs plus
the 2k FP. There was no bank switching on a stock 800. (Hence the "10K
OS ROM" label).

"Medman" (medman@northnet.org) writes:
> Can We post and trade atari ATR files in this newsgroup?

If you must post binaries to USENET please use a designated
group, such as comp.binaries.atari. Any binaries posted
here would most likely be auto-cancelled.

You can also upload your ATR images to the cyberspy3 archive, check out
http://www.superlink.net/~scharles for more info.

You can also send for this list by mail.
URL:mailto:mail-server@rtfm.mit.edu message says:
send usenet/news.answers/atari-8-bit/vendev
quit

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
```

developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the PD by the copyright owner. If there is no copyright notice, software must be considered Freeware rather than in the Public Domain.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics magazine, published by Jim Hood and Bob Woolley
- The Atari 8-Bit Omnibus, published by David A. Paterson

"Hi!" to Marek Tomczyk, who has supplied SO much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

> rom is overlaid on the 16k space?
>
You're confusing the original 800 with the XL/XE machines. The 800 only
had 10K of ROM, with nothing in the addresses C000-CFFF. The XL/XEs used
a 16Kx8 ROM chip, with a MMU chip to handle things like the math pack
and the 2K address space used by the I/O chips.

PS: I'm not sure, but possibly the OS ROMS could be standard ROMS with the
chip-enable polarity reversed, like Atari 2600 game roms.

Try XL-It! v0.16, it seems to be the most stable of the bunch...
and where are you gonna send these 1000+ games? Are they all cracked???

More info please...

Bob,
Right. I saw that, but that was after I posted the program. It's still
fun to see, anyway.

Enjoy!

: Idealy a programme for MyDOS and SpartaDOS disks.

: (of course the MyDOS disk would have it's bad sectors de-allocated by
: VTOCFIX)

I would LOVE to have a program of this nature. A friend of mine was
writing a Sparta Dos version of a Bad sector mapper, but ran into a wall.
I asked FTe if he could send along some sparta tech info, but he never did.

BTW, I had my VISA account debited for $60 Canadian funds for 3 Sparta X
Roms almost a YEAR AGO (!) and I am STILL waiting for them. I would use
caution when dealing with Mike. If I did not consider him a friend, and
know he WILL eventually get them to me, I would have called the RCMP by now.

At any rate, the problem I have with a couple of hard disks is this. When
I do a low level format with the BB, the program finds various bad sectors
and maps them out. However, when doing a high level format, there are
certain bad sectors which get past the high level formatter, despite it
being set up to also map out bad sectors. I have certain partitions on
my Hard disk which are unuseable because neither formatter can find the
bad sectors....and when I hit them, I can't write or read past that point.

Any suggestions from others besides getting a new hard disk mech??

3180. computer/tv cable for 800xl

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-18 00:00:00 UTC
From: msmith@direct.ca
Message-ID: <msmith-1710961620540001@van-as-07a05.direct.ca>
Source record: 79393

I have an 800xl, long sitting in a box, that I want to give to my nephew, but I can not locate the cable to conncect the computer to the box that switches from computer to cable source for the tv. I am looking for:

1) a cable from a dead system.

2) the pin out from the 800xl in order to build one.

Any help, much appreciated, Matthew SMIRH

I'm pretty sure it's the phone number in some form. I can't remember
if you have to type the ()'s and -'s also. You can't type it from the
title screen, so I guess it has to be typed from within the game.

On a 130XE, a couple of microseconds will RESET the machine. It is
controlled by a 555 timer, so you should only get 'good' RESETs.

Hi !
Does anyone know how to access to Mydos subdirectories under Diamond
GOS? I have several HD-disks formatted with Mydos and I can't get to the
programs in those subdirctories...
Btw. I can access to all files (1.44MB !) stored in the root-dirctory...
Bye, Stephan

Let's not confuse the hardware with the software. On the hardware side, the Reset button on the 130XE pulses the input to a 555 timer wired as a One-Shot. This makes for a good debounce circuit, yielding only one reset for several contacts in a short period of time. I'm just wondering what the minimum input pulse width is. My add-on circuit will provide a very short pulse to the Reset pin, but I'm not sure if it will be wide enough. If not, I'll have to add two ICs to hold the line down for a while.

It's the Operating System (the software) that checks for the flags and decides what TYPE of Reset to perform. That's how I was able to modify the OS to perform a warm-boot, cold-boot, and cold-boot with OSS/SDX re-enable by pressing certain keys in association with Reset.

Well I am pleased to announce that The Fridge is now open:

http://stratus.esam.nwu.edu/~judd/fridge/

Yeah, there's a lot of stuff missing or incomplete, but it's now good
enough to open up to the world.

What is The Fridge, you may ask? The Fridge is, in essence, source code:
utility routines, programs, etc. There are also a few other things in
there, like an index into electronic magazine articles and such. Rather
than explain further, I would rather suggest that you go to the page
and have a look for yourself :).

Now I am a C=64 programmer, and that is what computer the page is geared
towards, but there is/should be a lot of vanilla 6502ish code there which
any machine can use, hence the crossposting to the Apple and Atari
heathens. ;-)

Currently it contains code that I've had laying around, which is no fun
for me. So if you have some useful source send it my way with an
appropriate description so that I may put it up on the page! (And if
you have some links to useful source then send them my way as well).
I strongly encourage any programmers out there to participate!

Comments, questions, assertions, and sources -> judd@stratus.esam.nwu.edu

evetS-

P.S. My homepage has also moved to http://stratus.esam.nwu.edu/~judd
P.P.S. If you have a particularly old or brain dead WWW browser you may
need to use http://stratus.esam.nwu.edu:80 also, if you don't
have a tilde and don't want to type /%7Ejudd, /judd will also
work.

OK. The 555 input is a .1ufd capacitor that is essentially
instantaneous when pulled low. It charges thru a 470K resistor back up
to a high level in 100ms or so, right? Now RESET is no longer being
asserted, even though the key is still down. When you release the RESET
key, the capacitor discharges thru the 470K again. Any down levels once
the capacitor is partially discharged will produce another RESET.

Don't do that! If you post binaries to a comp.sys group, Dick Depew will
just cancel them. And binary postings are rather unreliable anyway. A
FTP site would be a much better way of distributing the games. Check out
ftp3.cyberspy.com/atari8. There are three archives of Atari stuff there;
upload anything they don't already have. (Yogi at the very least has a
writeable incoming directory to put stuff in.)

Once you've done that, just post a notice to the newsgroup about what
files you uploaded.

>Is their any story behind this game? What is the replay value? And
>what is the most you would spend for it?

>I believe it was made by Synapse

In my opinion, Necromancer was one of the best games ever made.

On the first level, you're the wizard in the middle. Your wisp is controlled by your joystick. Get the jumping things to get more seeds. Plant the seeds with your button. Nail the trolls with your wisp or they'll steal your trees while they're small. The spider will poison the trees and they will start screaming. Nail the spiders and cure the trees by wiping them with your wisp. It gets pretty frantic. Try planting trees in rows, starting at the outside. Protect the furthest trees from the trolls until they are full grown, then plant between them where the trolls can't get to them. At the end of the level, you keep any full grown trees for the next level.

Level two. The purpose is to prevent as many spiders from hatching as you can. The things that show up occasionally that look like 7's are to raise and lower the ladders. Grab a tree with your wisp and walk it to where an egg is hatching. Plant it with your button and it will grow and hopefully smash the egg before it hatches. The more eggs you smash, the fewer opponents in level 3. Kill any spiders that hatch. When you've gotten all the eggs, follow the ladder down. If you run out of trees, go down as fast as you can.

Level three. Walk over all the gravestones, while killing the spiders with your wisp. Nail the necromancer as soon as possible. After you've cleared all the gravestones for each part of level 3, you win. I only won it once many years ago, but it was an impressive ending for the time.

Whilst reading the usual rubbish I find here, Robert Woolley wrote something
interesting to All about Hardware Timing Question:

Hello Robert,

RW> controlled by a 555 timer, so you should only get 'good' RESETs.

Unless you're one of those unfortunate people that had a "bad" 555.
Apparently, there are some that don't work correctly, and give a pulse on
pressing RESET, and later, when releasing it.

However, I think that by the time the 130XE was released, this "feature" of the
555 had been rectified.

Hey, is this a first, I wonder? That is, a simple IC having an apparent
software problem. I mean, I've just been talking about "features", but really
it was a "bug". :-)

Followup-To: poster

Hello All,

Okay, this is what I want to sell:

Atari 800 + BASIC cart, UK GTIA model. That is; 240V/50Hz supply and PAL output, *not* NTSC. I also have the original handbook, etc. To be included in the sale.

Monkey Wrench II cartridge for use with the above machine. Again, it's of no use to owners of latter models, because it's a *Right* port cartridge. I still have the manual for this, too.

Offers for either by e-mail please. Remember that I'm in the UK, so an offer of $5.00 ain't gonna be worth it for me to ship "across the pond". I will accept payment in US dollars, as well as UK pounds. US dollars will have to be cash only I'm afraid, because it costs too much to exchange anything else.

> That's not Return of the Jedi, that's Death Star..........

No, it is "Return of the Jedi." It really had nothing to do with the film, save for the miniscule plot mentioned above. It came out before Atari's arcade version. In any event, this was yet another poor port to the Atari computer from the 2600. It was just a literal translation, about the only thing improved was the hyperspace effect.

Speaking of which, Parker Bros. pretty much botched "Star Wars: The Arcade Game," too, which was actually designed for them by Imagic. The poor gameplay and watered down translation made it almost unplayable for me. I knew the Atari arcade game by heart, and played it well. The 8-bit cart lacked all the features of the arcade version. The programmers of the former obviously didn't think the game would last that long because it would only count to wave 99, after which, the wave 12 trench is repeated indefinitely. One time I played for 5 hours straight and got 44 million some points (wave 154, which I had to manually keep track of), but quit over boredom. <g>

You stopped reading a little early. :) The next section of the
message stated that I would probably be doing the Jaguar in the next
batch (along with the Sega CD / 32X and CD-i). I don't have many
titles for these systems, so I'll try and do them all at once.

I also just received e-mail asking why I had no CoCo screen shots. In
boths cases, the answer is I haven't had the time. I do them in the
order I feel like doing them in, and trust me, eventually I'll do them
for every game/game system I own (list available on my web page).

Have patience. :)

I'm looking for an Atari User named Sloopy Malibu. He's been an Atarian
for a Long time. He even used to write articles for Atari Magazines. I
Remember one in AIM Magazine. I have some unfinished Business with Him.
We were in the middle of a Trade and after I received my part of the
Trade, I lost touch with him. And I still need to complete the Trade.
If anyone can help... An E-Mail Address, a Phone Number. Direct any and
all Replies through E-Mail to: bensmith@teleport.com

==Thanx==
===Ben===

Ok, figured it out --- It is the phone number: 2137826861
type it without the ()'s and "-" during A GAME.

then it's shift+ the level number you want to go to.

However, if you're playing this game on an emulator, keep in mind that
the PC keyboard is different from the 8-bit. So here are the symbols
that take you to the different levels:

level 1: "!" same
level 2: """ (Double quote)
level 3: "#" same
level 4: "$" same
level 5: "%" same
level 6: "&"
level 7: "'"
level 8: "@"
level 9: "(" same
level 10: ")" same

I just want to pubically applaud Mike Novak for putting up these screen shots.
It is a good resource to have on-line.

> the capacitor is partially discharged will produce another RESET.

Makes perfect sense. I didn't want to bother plugging in the XE's 555 circuit into LogicWorks to see how it would respond, and I don't have my XE set up yet to test the circuit.

Not that I necessarily expect to do this, but what do you think would happen if I were to conect my circuit into an XL? I see that one uses a pair of Schmitt trigger inverters, but it's still wired as a "live" connection between input and output. Think that'll respond to the same couple of microseconds?

3211. FS: Atari Items

Newsgroup: comp.sys.atari.8bit

We have the following Atari items for sale. Unless otherwise noted, none
of these pieces include power supplies or SIO cables.

Atari 130XE with 1050 Disk Drive,
power supplies, and SIO cable: $60.00+s/h

Atari 1020 Printer with a roll of paper
(One of those narrow-carriage printers) $10.00+s/h

Atari Touch Tablet with stylus and
interface cable: $15.00+s/h

Atari XM301 300bps modem with
interface cable and manual: $ 7.00+s/h Works on 130XE, 65XE,
800XL, or 48K 800;
but not on 1200XL.

Atari 850 Parallel/Serial Interface: $15.00+s/h

Atari XEP 80 80 column controller
and parallel printer port with
software and manual: $20.00+s/h

Atari CX85 10-key Keypad: $10.00+s/h

Cartridges:

Atari 2600: Demon Attack $ 2.00+s/h
Street Racer $ 2.00+s/h

Atari 5200: Football $ 3.00+s/h
Galaxian $ 3.00+s/h
Pac-Man $ 3.00+s/h

Atari 7800: Choplifter $ 3.00+s/h

Computer : Action $ 3.00+s/h
Battlin' Bands $ 3.00+s/h

As a matter of fact, they are ALL cracked or at least lack protection.
Yeah, I collected and traded for them way back in the 70's and early
80's. I'll give the XL-It a try. I can u/l them directly onto the
newsgroup(s) by using the MIME or UUENCODE method.

Just with in the past couple months bought Netscape Gold direct..Big Mistake..Granted it is a fine program for several things..but Support which they state as WORLD CLASS is not!.. I work for a company that offers World Class Service and it totaly excells Netscape by 900%.

I have replied to all the messages coming back and have at least an 80% failure to deliver factor...something is definately wrong.so I have shut off the mail server in Netscape..

If you have replied to one of my post and have not received and ansere..I did anser all request for items I had posted..then re-send the reply..I have enabled Endura and that E-Mail server has not failed me once in over a year at delivering mail or a file..

I do apologise for Nestcapes failure..and will raise h..l with them Monday voice..as their World Class Support does nothing for me..

3218. HELP WITH ICE-T

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-20 00:00:00 UTC
From: ajbufort@mail2.sas.upenn.edu
Message-ID: <54cseu$c7o@netnews.upenn.edu>
Source record: 79331

Hello all...

Recently I downloaded an arced/diskcommed file of ICE-T. Got it
on my disk no problem. But when I appended ICET.BAK onto my handler
(the handler on the XE TERM disk that came with my XM-301, it didn't
work. In retrospect, I figured that this was because ICE-T takes an R:
handler, and the handler for the XM-301, according to the docs on my
XE-TERM disk, is supposed to be addressed as T:. My question to anyone
who can help is... how do I get ICE-T to work with my XM-301???

Thanks in advance,

Tony :)

(ardent Atari 8-bit enthusiast!)

The 800XL RESET switch is used to discharge a .1ufd capacitor - which asserts RESET to the system. The time required to do this is determined by how much current you can suck out of the capacitor.... Be hard to do in less than 10usec. or so.

Bob

Where is this .1ufd cap of which you speak? According to my XL schematics,
the reset circuit has the following components:

R40: 100
R39: 56K
CR1: 1N4148
C49: 47uF
U19: 74LS14N

Ooooo! 300 baud! Ouch! Well, I have tried to find a handler
for use with 300 baud modems, but it's a no-go. Better to go to
at least 2400 baud. These modems can be picked up for nearly
nothing ($5-10) nowadays.

Of course you will need a P:R:C or an 850 (there's the catch, eh?)

I do assume you have it all wired toghether and get a screen..look at the screen and find a drive above a/b?? Not sure if it has an external floppy or not..then take the mouse and go to a higher drive..double click on it should give you some folders. Click on one of them. the open the files you want to run..Simple???haha

At least this should get you started..The 20mg hard drive has to have files on it that are executable..you probably have what you need on the hard drive..

Hope this helps..
Bob

3230. Atari XF551 Disk Drive.

From: twonoahs@aol.com
Message-ID: <54ehln$p8t@newsbf02.news.aol.com>
Source record: 79344

Necromancer was the first Atari 800 game I ever bought. It was on a datatape and took about 12 minutes to load up and sometimes the load wouldn't always work (remember tape drives?).
The game was (and is) awesome and a lot of fun. The graphics at the time blew me away (shimmering trees). The sounds were cool and the theme music in the beginning was so cool and eerie that I used to just sit and listen to it. I'd go as far as to say it is tied with M.U.L.E. for best videogame theme song EVER including the SNES, Saturn, PSX, etc.
The game has a ton of replay value and I don't even think I ever got to kill the evil dude at the end.
What would I pay? You can probably get it for free, but with docs it's worth $7.00 or so, I'd say...

3232. Re: necromancer

Newsgroup: comp.sys.atari.8bit

I would probably say that Necromancer was one of the top 10 Atari 8-bit games ever made. Well, heck, it's a lot better than most stuff that came out afterwards and even today.

Synapse often used the Atari computer to its full potential, and this was no exception. I just loved the dreamy graphics and sound effects. Never made it to the last wave, but at least I had fun!

3233. Shamus and XL-it! 0.16

Newsgroup: comp.sys.atari.8bit

I have the following Atari items for sale (or trade), all are clean and in working condition with accessories as specified. All offers to buy or trade hardware and cartridges will take priority over offers for just the cartridges alone.

Hardware
-Atari 1200XL With BASIC cartridge, Power Supply, RF Cable
-Atari 800XL With Power Supply, RF Cable
-Atari 800XL Without Power Supply
-Atari 600XL With Power Supply
-Atari 1050 Disk Drive With Power Supply and connection cable
-Atari 1050 Disk Drive Without Power Supply
-Atari XMM801 Printer With manual and Atari Writer Plus (unit has built-in power supply)
-Atari SX212 Modem With Power Supply
-Atari 520 ST Missing all accesories
-Atari XL/XE Paddles
-2x Suncom Tac Controllers

Cartridges
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Miner 2049er
Missle Command
Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football
Robotron: 2084
Star Raiders
Tennis

Books and Manuals
-Atari 800XL Manual and conection guide
-Atari 1050 Manual
-Consumer's Guide "The Users Guide to the Atari"
-Compute's "Third book of Atari"

-Compute's "The Atari Basic Source Book"

If you are interested in any of these items, please make me a serious offer in US funds (buyer pays shipping), as far as trades go, I am interested in the following types of items...

Intellivision - Rare Hardware and cartridges, Shrink-wrapped cartridges, Bilingual boxes released in South America
Vectrex - Hardware and cartridges, on screen Multicart(s)
Atari Lynx - Hardware and cartridges
Mattel Electronics - Handhelds (especially Backgammon), Aquarius computer items, etc.
Coleco - Handhelds, Total Control 4 carts, tabletops, as well as some ColecoVision items
Microvision - Hardware and cartridges

On Mon, 21 Oct 1996, Steven Reynolds wrote:

> I was wondering if it is possible to install a momentary switch between
> 2 points inside the 130XE to cause the same effect as a power-on reset?

On one of my 800XLs, I added a "cold start switch" that operates as you described. On down the road, when I decided to modify my 130XE, I had become a constant user of SpartaDOS X and OSS cartridges (Basic XE, Action, and MAC/65). Since each of these has the ability to be "unplugged" via software, I decided my new Reset modification would need to be able not only to cold start the machine, but to re-enable these cartridges as well. My solution was a small modification to the Operating System ROM. Now I can press RESET for a normal reset, HELP+RESET for a full reboot, and SHIFT+HELP+RESET for a full reboot with all ICD/OSS cartridges enabled.

3236. OS-disabling

Message-ID: <326B6BB1.41C6@htw.uni-sb.de>
Source record: 79349

Hi !

I read in a disk-mag that some cracks "disable" the OS-ROM by
changing the PORTB from output to input.
Does anyone know a game that has been cracked in that matter ?

BTW: If someone has an idea (or two) why Koronis Rift (and
other Lucasfilm-Games) don't work -> E-Mail. Thanks.

Bye,
Markus

PS: Short hint for XL-it! 0.16: The user-interface library
is somewhat buggy. If it doesn't work with your system
use the command-line switches please.

Re: Star Wars

> What features were there? I thought it was a pretty
> straightforward game, shoot the Tie fighters and then blow
> up the Death Star. Gets tedious pretty quickly.

The only thing that was right was the look of the X-Wing. The movement did not correspond to the screen (only the cursor moved). And as for the cursor, it was not self-centering like the arcade version, which meant you had to quickly jostle the joystick back and forth. There was also no flight sensation. The Death Star only stayed one size, and its explosion was a joke. The TIE Fighters flew in a fixed pattern (diagonally) and also never changed size. There was no music to accompany the scenes, either. The game only used the opening bars of the theme music, but it was the wrong version -- they used the piano arrangement instead of the film arrangement! There were countless of other ommissions or simply badly watered down things put in (e.g. 2600 quality sound effects). However, I understand subsequent versions for the PC and ST that came out in the late 80s were closer to the arcade than this one.

> I liked the controller used in the arcade version.....

Ditto.

> Is this the file with the unlimited shields? The ones
> I have all have unlimited shields, when it gets down to 0
> shields and uyou get hit, it jumps back up to 9.

Poor me, I only had the cart version ($50 from Toys 'R Us), which meant I could not be generous over my shield use! I actually almost had my game end on several occasions when I was down to one shield or no shield.

I hope with the recent releases of classic arcade games to the PC, that Atari Games will do the same for this and others!

I heard that the ORIGINAL BBS Express was made freeware recently, but I
can't find it on the Net. It had a few cool things like its own hypertext
system.

BBS Express Pro, however, still costs money, but well worth it if you plan
on having lots and lots of loyal callers who demand the best. It sort of
makes you feel like you're on an old, old IBM board.

DON'T, DON'T, DON'T get BBS Construction Set!!! Buggiest thing ever. It was written on an Apple II then ported to the Atari by a guy who didn't even own one. I've been a sysop since early in the 8-bit days and I don't know anyone who ran BBS Construction Set for more than a week. I gave away my copy to a guy I didn't like! :^)

AMIS is okay to get your feet wet. It's entirely in BASIC so it can be hacked as you see fit. Our user group (SAGE) put out a version that ran all of the disk based files from a RAMdisk on the 130XE or an expanded XL. It sent all of the log stuff to the RAMdisk also. So, it allowed you to run a BBS with a single disk drive and no printer. It also saved a lot of wear and tear on the disk drive because it only ran for uploads and downloads. It was intended as a starter program and was called AMISXLRD, I think.

The best way to go though is to run BBS Express. This is easy to set-up, easy for the sysop to learn, and easy for the callers also. More importantly, it is also extremely reliable. It was released as shareware after Express Pro came out.

> title screen, so I guess it has to be typed from within the game.

It took a bit of digging but I found my old cheat sheet on Miner 2049er.
Here is what you do.

"Go to level one and move to the right hand edge of the first platform
(so you have time to do this without getting zapped). Type in the 10
digit phone Number which is 2137826861 (no dashes or brackets). Now any
time you want to go to a different level, hold down the shift key and
press the level number. You may have to tap the level number 2 or 3
times while holding down the shift key but it works. No need to type in
the 10 digit number after the first time unless you shut the game off or
hit reset."

I know it works. I used to do it regularly.

3247. Super Breakout question

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-21 00:00:00 UTC
From: "Mr. Maddog" <mrmaddog@ptdprolog.net>
Message-ID: <Pine.GSO.3.95.961021192102.26110J-100000@ns1.ptd.net>
Source record: 79360
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit

I was wondering what are the differences between the 2600 and 8-bit version of Super Breakout? Does the 8-bit have the same sound effects as the 2600? That's why I mainly play SB. I try to get 8-bit games if I could. Thanx! :)

Necromancer is one of the BEST games of all time, The freakin' game just gets TOO DAMN HARD though towards the end!, It becomes a matter of luck if you get further, and my hands literally KILL me from putting up more trees and moving the joystick every which way but loose to defend myself! Now that I can use a Sega gamepad type controller with the game, I wonder if I could get further? I'm going to play it again soon.

The game is downright SCARY at times! Ever played it alone with the lights out? The music and sound effects freak me out a little!

3249. Info. about Atari XF551 Disk Drive.

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-21 00:00:00 UTC
From: "Jay R. Jenicek" <JJenicek@ix.netcom.com>
Message-ID: <326C0ACE.F1A@ix.netcom.com>
Source record: 79362

To whom it may concern:

I am on the market to purchase an Atari XF551 drive to accomodate my Atari 130XE. The main reason why I'm choosing an Atari XF551 drive is because it matches the 130XE in color. I've never seen an XF551 drive in person, but am I correct in assuming they color coordinate?!? I know this is trivia, but aesthetics are important to me as I have started a computer museum and Atari is the centerpoint. I need a second drive anyway because my 1050 sounds like crap, it works, but sounds like trash.

Anyway, could someone with knowledge give me an opinion on the XF551? I've read mixed messages about the XF551 in that it changes speeds and may have problems running certain software. What is your opinion on this? I need it merely to run my existing Atari games, in low density and double density, and would really like to know if my choice is a good one before I spend the money.

Thank you very much!

I would like the original bbs express? It doesn't require atascii does it? The atari will be connected into a terminal server that will probably have 4 or 5 other computers running other bbses. It is more of a experiement in hooking older machines to the net.

AND THERE WILL BE _NO_ Commodore 64s. :-)

Any idea of where I can find it on the net?

And is there any problem using 8 1050's with it? :-) Ive got a huge stack of them, havent tried to use them (I realize if would have to internally mod some of the (5-8).

Message-ID: <326C3B91.3022@interpoint.net>
Source record: 79364

Well, I must say I didn't believe it when he told me he could do it, but I sent my 130xe and a small fee to Steve Tucker and he transformed it into an Atari 8-bit dream!!

Two switches that look totally professional, like he never did anything to it, allow me to choose a combination of 4 different ROMs to use with it. I can bypass basic without holding the option down, switch between Fix-xl and Omnimon to boot my old 800 stuff, or just leave it alone unmodified. Finally all my Atari's combined into one computer, It's like having an 800 with 128k and a better video output that runs XE files, COOL!! Thanks Steve, no more Translator disks and holding that damn option key down anymore!!

-Rich.

3252. Connecting an 800XL to an ST

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-21 00:00:00 UTC
From: skr@dcs.ed.ac.uk
Message-ID: <DzMr4C.K79.0.staffin.dcs.ed.ac.uk@dcs.ed.ac.uk>
Source record: 79365

I would like to be able to connect my ST to my 800XL perhaps via serial ports to be able to download software to the 800XL.

I use ST X-Former to emulate the 8-bit but it cannot run games.
I would like to know if the ST Xfer, program which transfers 8-bit files to 8-bit disk image files, is capable of this.

Note that I do not have a disk drive for the 800XL.
--> I want to be able to use the Xfer programme to transfer files to the 800XL from the virtual disks on my ST.

Can I do this without an 8-bit disk drive?????

3253. Atari 130XE reset switch?

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-21 00:00:00 UTC
From: steven@rain.org
Message-ID: <54eugl$f89@news.rain.org>
Source record: 79366

Considering that most Atari games don't allow you to reboot using the
Reset key, I find that I have to turn my 130XE on and off after almost
every game. The 130XE seems to be tough enough to handle this, but I
was wondering if it is possible to install a momentary switch between
2 points inside the 130XE to cause the same effect as a power-on reset?

After all, a Commodore 64 can do it, so surely an Atari 130XE can...?

If you can describe the locations to solder to inside the 130XE, ie. the
chip U and pin numbers, please send me the instructions in e-mail.

Thanks.

I remember this trick as well: you had to type in the entire phone number, including area code, and then (I think) hold down shift while pressing the number of the level you wanted to play. Try that. If that doesn't work, there was a special version of the game floating around on some archive that let you pick your level and increase your lives in a custom screen before going into Miner. Let me know if it works.

The XF551 is the color of a Macintosh computer (I believe it's the same as an XE). Anyway, it's a great drive - I have two, plus a 1050. It's much slimmer and quieter than the 1050 and they have never given me any problem (whereas I've had to re-solder the serial port on my 1050 several times)

Of course, the old 800 had the best keyboard of all. Now if there
were only a way to cram all of my 130XE's functionality (a COMPATIBLE
memory upgrade, both OSes, and the expansion port) into that nice
chassis.

Yes, the XF551 does match the XE line of computers in color and style.
There are a few little bugs in the drive, like when you change disks from D/D
to S/D the drive doesn't change densities too well. I have found that to
quickly change the drive density to what you want- is to pretend to format a
disk in the density u want (ie no disk in drive). Otherwise it is a very good
Disk Drive, runs high speed too with SuperDOS 5.1 as well as true Double sided
disk access. One other problem is it will not format the back of a disk- so no
more "flippy" disks. You Can actually upgrade it to use a 720k disk drive, or
both if you want, but I'm unsure where you can get this upgrade from. Anyway,
I hope this has been slightly helpful for you

I have a Full copy of OASIS BBS system if your interested, although I'm damned
if I can figure out how to set it up. The main point is it runs under
SpartaDOS,
which can access all 8 disk drives. BUT you need at least a 130 XE to run as
it
uses the ramdisk to store a lot of files (the more memory the better: 320XE?)

I've never had a problem with an Atari keyboard, or noticed any differences.
I have my first ever Atari 600xl(expanded to 64k) and the keyboard is identical
to the 3 other 800xl's(2 64k,1 256k) that I have in form and function.

One problem recently arose after 10 years of use: The 256k 800xl I have. The
select key doesn't work anymore. I could care less really, since I have the
others to play Star Raiders on but when I use Atariwriter+ I like to use the
3 memory banks, and you need the Select Key to set the tabs.

Anyway, I know it isn't the key itself because I've taken other keyboards
off and put them on this one and it still doesn't work.

Any suggestions?

Randy.

What a great idea! Can you share with us the changes you made? Did you actually burn an eprom or is the new OS booted each time from disk? If eprom, can you burn more and sell them?

3272. Atari 800/XL/XE/XEGS Cartridge List 2.3

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-22 00:00:00 UTC

```
================================================================================
= Cartridge List for the Classic Atari 800/XL/XE Computers =
================================================================================
= Rev. 2.3 October 18th, 1996 =
= =
= Author: Andrew Krieg krieg@execpc.com =
= =
= This list is also available via the WWW at: =
= http://www.cs.uwm.edu/public/krieg/fun.html =
================================================================================
= Welcome to the Classic Atari Computers Cartridge List! This list is based =
= on a list originally started by Kevin Chase. Many personalized versions of =
= Kevin's list started to pop-up, so I have attempted to consolidate every =
= bit of data I could find into one list. I hope you find it useful! =
================================================================================
= Key =
= ------ =
= NR = Never released =
= ?xx = Year of release not known for certain. =
= kbo = Keyboard overlay was included with cartridge. =
= kp = Works with a Koala pad device. =
= lp = Works with a lightpen device. =
= ppt = Requires Chalkboard Inc.'s Powerpad Tablet device. =
= rso = This is a right slot only cart, exclusively for 800 computers. =
= CPS = Consumer Products Service, a division of Atari.
= * = This cart only runs on 400 and 800 model computers. =
= 2 = This cart requires 2 joysticks to play. =
= + = This cart was released more than once in different cart cases. =
= <none> = No catalog # for this cart =
= [O] = Checklist for cartridge ownership =
= [M] = Checklist for manual ownership =
= [B] = Checklist for original box ownership =
= =
= To reuse the checklists, use your favorite editor and replace all of the =
= string patterns "[x]" with "[ ]". You have to calculate your own ownership =
= and ratio values as well. =
================================================================================
= The rarity ratings are still undergoing fine tuning. I would appreciate =
= any feedback on them. It should be noted that common carts for the Atari =
= computers are harder to find than common 2600 carts. They would probably =
= rank as uncommon or rare on the VGR 2600 list. =
= =
= Rarity =
```

```
= ------ =
= C Common These carts can be found fairly easily at thrift =
= stores, in sale posts on the 'Net, or in Atari =
= computer vendor catalogs (yes there still are some =
= vendors!). =
= U Uncommon A little harder to find, but they pop up on the 'Net =
= infrequently. =
= R Rare Very elusive to find carts. Some vendors still have =
= them in stock, but they are generally more expensive. =
= ER Extremely These are very, very hard to find. They usually have =
= Rare had a very low production run. Consider yourself =
= very lucky to come across one! =
= PR Prototype Never formally released. Only pre-release prototypes =
= exist. The ultimate rarity! =
================================================================================
= Total = 343 carts Own = 166 carts Ratio = 48% =
================================================================================

I guess maybe read them and spell check, ??

I was going to add other things but I did not.

3274. r-verter interface as sio2pc?

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-22 00:00:00 UTC
From: "Ronald A. Laski, Jr." <rlaski@midwest.net>
Message-ID: <326CD4C2.2B0A@midwest.net>
Source record: 79287

I have an r-verter interface. It has an sio cable on one end and a 5pin DIN on the other. The 5pin din plug has 5 of the standard rs232 connections in it. Inside the box sits a 1489 chip. If this thing goes between the sio port and an rs232 plug(which i used to use in my 1200bps modem), will it work as an sio2pc cable if i either: 1) hack off the 5pin din and wire a 9/25pin serial connecter, or 2) wire up a 5pin din to 9/25 pin serial adapter? (I do have the pinouts for all of them.) I just didn't know if it would work.

Thanks

In the 800XL, near where you connect the flat cable that comes from the
keyboard are two 14-pin IC's - I don't have the codes now, but they are
the only ones, and have the same code - try to replace them (they are
cheap). It worked with me.

No question about it ... from someone who has owned all the Atari 8bit
machines: 400,800,1200xl,600xl,800xl,130xe,game machine

The 1200xl had the best keyboard ... I'm a touch typist, and the 1200xl
had the best feel. 2nd place goes to the 800 .. 3rd place to the 130xe.
Of course, the lousiest was the 400, but the 600xl wasn't far behind.

Bill
(who sometimes wishes he hadn't sold his 1200xl with Super Video mod and
1 meg upgrade .. gawd .. what a machine that was!)

Whoah! The atari software archives uses a cool 'tabbed' setup to disply
it's information... the entire JavaScript routines use one global variable
and parent.{frame name}.location.href commands, and that's about it...

THERE ARE NO VIRUII ON THE PAGE! =)

Please go look, I-Explorer v3.x and Netscape 2.x+ will work with my
pages...

The Oct. 14 issue of PC Week has an article on Netscape and their vision.
They are going to go hard after the Fortune 500 companies for their intranet
needs. For them to succeed, they will have to develop world class support.
One of the things that PC Week did was 'grade' Netscape Communications Corp.
Their Service/Support was a C+ (the lowest grade they got).

A related article showcased Pratt & Whitney and how happy they were that they
had gone with Netscape for their server and browser standard.

Despite being the leader in consumer browsers, Netscape derives about 80% of
of its revenues from corporate sales of its browsers and server software. That
is where it feels it's future is.

If your going to use frames you should try a
tag called <NOFRAMES> on your page. It will let
browsers like Lynx see just the information betteen the
NOFRAMES tag. As it lynx shows nothing but a blank
screen on your page. :(

No, the START, SELECT and OPTION key are foiled directly into
the GTIA chip. Pins 12, 13 and 14 and I think SELECT goes to pin 13.
Try replacing the GTIA first.

Keyboard problems?

Most of you have taken them apart and have looked at the connector soldered to the mother board. If you have a key that doesn't function look into the socket it plugs into..perhaps the contact is bent in a little and not making a good connection on the marlar.

If so..then take a needle..or a pick that will fit down into the slot and move the contact out gently..dont bend it too much and your connection will become effective again.

Think of it as a bent over loop..it needs to be expanded a little.

Source record: 79299

You are correct they color scheme is correct..Howerver from the previous post I hav not encountered the problem he described as to switching disks I use Sparta 3.2d and 3.xx modified and corrected dos. The drive recoginises both densities..The drive does have enherant problems..it formats double sided backwards this can be fixed by getting Bob Puffs modification..if you don't need to have the data read by another drive then this is not necessary.

There are also problems with the board Atari put out with this drive the traces are so damn thin that they have a tendcy to crack.causing a break in the lines necessary to transfer data..If you buy a New drive plug it in once and don't move it in 10 years it will perform perfectly.

If you move it frequently, pull the sio cable in and out bend it a little getting anxious or same with power plug..the circuits on the board can not stand any strain..Right, Left, up or down!! Straight fact..

If you wish a used drive checked out and running I have a few for $41.00 each..guranteed to work, shipped..

I've got a 130XE which no longer works. Turning on the power results in a blank screen (no READY prompt) almost immediately, and it doesn't try to boot from floppy at all. I've opened it up and verified that the switch and PS are OK (there is +5V on the PCB pads). It stopped working gradually and was not caused by a blow or anything like that. I was hoping that this would be enough info for someone who's had this happen to identify the culprit. Any help would be appreciated. Thanks.

Prior to purchasing the right to BBS Express! Professional I ran Keiths old BBS Express, for the 1050 850..ran it on a Percom with 3 slaves attached..You would have to modify the dos, ect to get it to run 8 1050's and possibly not be practical..unless you upgrade them to double density.
Your message bases would be few your file area limited but not unreasonable for a small bbs..But it still could be done..

It is not Ansi compatable..you can have Ascii users and Atascii users..why eliminate Comodore users? They in the past have partisipated within the message bases and are as a rule good modemers..keeps the board active..Besides they are actually brothers/sisters to the 8-bit Atari systems..look at your original software it says one side Atari other side Commodore.???

Rich,

I remember going to the Broadway (department store) and buying this game (on cassette) when it came out(of ALL places to buy software!!!). This game is truly an Atari 8-bit classic and deserves to be experienced by any Atari 8-bit fan the way it was meant to be: On a real Atari 8-bit computer with the REAL Atari sound! And what sound! Coming from an 8-bit no less! HOWEVER, this game did have one drawback in my opinion. It was just TOO intense, especially on the third level(cemetary). I could play this game no more than three times in a row, after which I would be sweating (and believe me, I don't sweat very easily) and be just plumb wore out. I never have 'won' on it, but my little brother did ONCE, back in the 80's. I really don't remember the 'win' screen. I think I still have the instruction sheet somewhere in my closet with the old 8-bit stuff 8) Maybe I'll crank up the old 800 and give 'er a go again! Great memories!!!

Sergey Zakharov

3292. Netscape Gold?

Source record: 79305

Ok I know this is the Atari 8-bit section however..I am using the newest software to access it..Netscape Gold..

I purchase this software outright..direct from Netscape and am having nothing but poblems since I install it. Anyone else haveing problems?

What I have for a system..386.DX40 with 16mg ram..2+gig scsi hard drive..configured my system according to their sepcs and suggestions still have a problem with Mail..System bogs down to lower than 300baud hesitates and times out...When I send something will not attach a small simple file..shows very light that it is attached but receiver doesn't receive it.

Had a suggestion I revert to an earlier revision 2.??, is this problem inherant of Netscape and their support had become tired?? Of my questions no responce in the past few days..

Is there a pattern for this? If anyone else is haveing the same problem perhaps we can get it fixed??

Don't mind paying their price for new software but I as you expect it to preform?

I've been able to download and use all of the classic Scott Adams text adventures 1-13 as well as 'Sorcerer of Claymorgue Castle' and 'Questprobe 1', from the various archives available. However, I seem to recall that Scott Adams rereleased some (all?) of his text adventures with graphics. Were these ever available for the Atari 8 bit? I know that the Questprobe series was, because I used to have one of them for my 130XE and it had excellent graphics and a good parser. However, the Spiderman questprobe I downloaded from the archive is text-only, split-screen like the original twelve. Does anybody out there (maybe Yogi or one of the other archivers) know what I'm talking about? And what about Return to Pirate Island? Was that ever released for the Atari platform? If anybody knows more information about these games, or knows an archive where I can get them, please let me know. I play (and collect) all of this classic software and would really appreciate it.

Have you considered offering a text version of your page as well?
Hate to see those "ATARI 8-BIT WEB PAGE (people browsing with an
Atari 8-bit need not bother" type of announcements. Would be
nice.

Definatly... once i get the site 'debugged' and running i would love to
offer
a text only version... Is there actually any way i can code ATASCII into
my pages for the 8-bitters?

What do you mean you developed it with Linux?
Is there a Linux version,or do you mean DOSEMU?

You should have it check for and extension of "ATR".
You should use "Find File",which will convert "atr" to "ATR".
(well,I guess it will.It worked on the Amiga...)
Plus,if DOS suports lowercase filenames,XL-It will be using the corect case.
(if DOS ever gets lowercase filenames)

This was a nice thing on the Amiga.Becuase some text editors simply
deleted the old file and created a new one,people who didn't bother typing
in the right case would end up with all their filenames in lowercase.
It doesn't hurt anything,of course.
Text editors that actually looked up the filename in the directory could
maintain the case.

: were in lower case...

I was thinking of this case problem.

a)DOS shouldn't've acepted lowercase filenames from the beginning.It just
foils any atempt to add lowercase functionality later.

b)SpartaDOS X converts any filespecs to uppercase.
Of course this means that any MyDOS files (or altered AtariDOS,there's
something about that in Mapping the Atari) in lowercase are inaccessible
unless you can use wildcards to identify them.
Of course SpartaDOS X doesn't recognize MyDOS disks half the time.
(you get error#148,unrecognized diskette format)
If they had told in the manual how SDX recognizes the different formats,I
could alter the disk.

: To: mrmaddog@prolog.net
: Subject: Dear Eric

: Dear Eric
: Can you post this request onto the comp.sys.atari.8bit
: newsgroup for me?

: I have lots of demo programs on some old 5.25" disks that I'd like to run
: under the Xformer 2.51 Atari 800/XL emulator.

: A lot of these old disks are US Doubler with skewed sectors,
: or SpartaDOS true double density disks.

: Can disk images be transferred across intact and usuable, where upon
: a self-booting machine code menu is being used. ie. the disk format is not
: standard SpartaDOS format.

yep.But PC Xformer may not run your demo,even if it can read the disk.

: The SIO2PC cable sounds like it's more costly? and has the hassle of
: transferring from computer to computer, whereupon you need the right
: software running on their respective computers which handshake each other
: to transfer the data across...

You only need software on the PC side.The atari just accesses the PC as a
disk drive. (a really expensive disk drive)

: Some? of these files are no doubt for the PAL version of the Atari
: 800/XLs,
: is there an Xformer available as a PAL version?

As I remember,most programmes will work with either PAL or NTSC Ataris
because of the way the video chips work.But some don't.
(I could be wrong,I know that thge OS needs to know what kind of Atari you

need)

You may just look for a RS232 interface or Atari modem for your Atari.

3309. Free ATR Authentication standard

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-23 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <54kot2$ppp@freenet-news.carleton.ca>
Source record: 79233

After talking it over with Scott Charles (of Yogi's archive) it
was decided some form of abilit yto authenticate ATR images
after download was needed so its now a part of APE 1.10.

The specification and source code are all included, I hope other
people using ATR images in thier programs will pick up the
idea and incorporate it into thier programs.

The specification is attached. The complete package w/ the
SIGNATR dos executable is at http://www.nacs.net/~classics/signatr.zip
(no link on the main page yet, use this url directly to get it)

The program is freeware and the spec is free for anyone to use. If
you want to distribute SIGNATR.EXE with your applcations feel free.

Scott will be signing all the images at Yogi's with this method to
help eliminate problems determining if people have corrupt
images or real problems with the software.

Enjoy!

Steve

(p.s. to everyone waiting for Ape 1.10 hang on, its coming soon! :)

Author of APE - The Atari Peripheral Emulator
http://www.nacs.net/~classics

--
ATR Authentication and download protection specification

By Steven J Tucker - classics@nacs.net

APE Home Page: http://www.nacs.net/~classics

October 20, 1996

--
** NOTICE **

This specification was created for the benifit of the Atari
8-bit community and the information contained within may be used
as part of any project, wither for profit or not, and without
notice or payment to the author.

This document must be distributed only in its original form.

--

* Why do we need authentication? *

Most major Atari archives make ATR images available for download
in UNCOMPRESSED form to allow compatibility with all platforms
including the Atari itself.

Unlike compression envelopes like PKZIP, the ATR format provides
no protection for its contents. If an ATR image becomes damaged
at the archive, or in transit there is no way to tell other
than the image might not work right away. (even worse, it might
bug out after you spent 4 hours playing that game of Spellbreaker)

This specification provides a 32-Bit CRC like that used in
professional compression programs such as PKZIP.

As of version 1.10 APE fully supports validation of images
marked as authenticated.

--

** How does ATR Authentication work? **

The SIGNATR program included with this archive (or any program that
follows this specifiction) is used by your Archivist to sign
known-good disk images with a 32-Bit CRC that covers the total contents
and the fixed header information.

These ATR images are now considered to be 'authentic' in thier
unmodified form. When you download an image, APE (or your
favorite emulator that supports authentication) takes special steps
when the image is loaded:

Step 1: Check to see if image is a SEALED & authenticated image
Step 2: Read the CRC32 stored in the ATR header by SIGNATR
Step 3: Calculate the actual CRC32 of the Image

If the CRC32 is good, the program quietly breaks the
authentication seal (by setting a bit in the ATR header) and
goes about its buisness.

Since the authentication seal is
now broken, any program loading the file need never take
the time to authenticate it again, its loaded as quickly
as any other non-authenticated image.

If the CRC is good, the entire process is transparent to the user,
and takes less than 1/2 a second on a 486/50.

If the file was damaged, the program can take appropriate action
to let you know.

Because this method uses only extra bytes/bits in the ATR
header, it is transparent to utilities that are unaware
of authentication.

--

* Ok, How do I authenticate images for download? *

The program included, SIGNATR will do all the work for you. Just
run it with no paramaters for help. Once authenticated, you
can let users having trouble with your images use the same
freeware program to check to see if the image was corrupted.

--

* Technical stuff *

The 'authenticated image' flag is stored in BIT 1 of BYTE 15 of
the ATR header. This is the last user byte in the header.

Note: This byte should NOT be clobbered, the other bits
are in use or reserved for future use.

The CRC32 is a 32 bit signed integer stored in bytes 8, 9, 10, and 11
of the ATR header. A signed CRC with the hex representation of
$ABCDEF01 is stored in the header as:

```
8 9 10 11
-----------
01 EF CD AB
```

The CRC is generated using all bytes of the ATR including the
header. Bytes 8-15 of the header are evaluated as 0, and
NOT skipped.

The steps for signing a unsigned file are:

1) Calculate the CRC32 using the code below
2) Store the CRC32 in the header as described above
3) Set the Authentication Envelope bit as described above.

The steps for handling a authenticated file the first time it
is accessed by a user program:

1) Check to see if its an authenticated ATR (if byte 15/bit 1 = 1)
2) If not load as normal ATR and exit

3) Read CRC stored in header
4) Calcuate the acutal crc using the method below
5) If the values match CLEAR THE ENVELOPE BIT and load ATR

6) If CRC is wrong do whatever you want, warn user, etc.

The header is generated using a method common to many programs. Similar
source code snippets are available for all languages on the
net.

Complete pascal source for creating a valid CRC32 of an ATR
file is included below. If you write a C version of the
code please send me a copy so I can include it in this
document.

```
This code is not optimal, just quick stuff and it does
not check for memory, disk errors, etc. Check it over
if you use it.

Craig,
Java and Java Script cannot do harm to your PC. Java has built in
debugging to verify the class of the code. It will not allow things
like formatting of you hard drive and such. You simply have a read
type system. Thsi is a very simplistic descriotion, but you have
nothing to worry about with Java. Active-X, I don't know about.

Bob,
Check all of your configurations in Options. You can also check
http://www.cnet.com for additional info on Netscape, not to mention the
Netscape help pages at http://www.netscape.com.
Be sure you have your mail and news servers set properly
(POP,SMTP,NNTP)

Thanks for backing me up on this one... =)

The main reason i choose JavaScript was for it's ease of use (the actual source code is right in the HTML documemt) and for it's safetly... it's been proven safe!!! Active-X and/or Java have been proven to be 'insecure'...

there is a *HUGE* difference between Java and JavaScript!!!! Java is by Sun Microsystems and is a compiled language! JavaScript is by Netscape and is _based_ upon Java in it's stucture... it's 100% safe as the coder can NOT access any part of your system at all!!!

I reccommend turning the 'JavaScript' option box on... and leaving the 'Java' and 'Active-X' ones OFF if you feel unconfortable...

Does the sound for this emulator work for anyone? If so, do you have any tips on getting it to work? The read me says it "auto" detects but it must not do it very well. Still, it is (by far) the best Atari 8-bit emulator yet... With good sound emulation I would definitely be willing to pay for it!

I've actually considered creating an ATASCII viewer applet in Java, and
placing it on an ATASCII movie page.

3318. Trade in your old Atari equipment...

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-23 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <54lpqe$11j@news1.halcyon.com>
Source record: 79242

... for an Atari emulator!

Emulators Inc. (makers of PC Xformer and Xformer 96) now accepts
trade-ins towards the purchase of either PC Xformer or Xformer 96.
PC Xformer is the Atari 8-bit emulator for MS-DOS. Xformer 96
is the new Windows 95 and Windows NT version of it.

You can trade your old Atari 8-bit computer for a new copy of either
PC Xformer, Xformer 96, or the Gemulator Gold CD (which contains PC
Xformer and 50 megabytes of free Atari 8-bit software).

Registered users of PC Xformer may also upgrade to Xformer 96 free of
charge by sending in their original disk for an upgrade.

For full details see www.emulators.com or visit our booth this weekend
(October 26th) at the Toad Atarifest.

: One thing I am curious about... how *DO* you write a virus in JavaScript?
: It's an interpreted language... and you get no access to anything
: 'important' that you could wreck... seems silly to me!

Take a look around the net and try to find a paper on Insecurities in Java.
There are ways to get access to functions that one shouldnt have access
to in Java/Javascript. Some ideas are along the same lines as the security
bugs in Sendmail -- exploit buffer overflows to execute arbitrary code.

3322. FS/T: Atari 8-bit computer items [10/23/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-23 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <54lglo$13m@sjx-ixn8.ix.netcom.com>
Source record: 79246

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 10/23/96

NOTE: There are currently 1010 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 9.50 Delta Drawing (Spinnaker)
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

To reserve an item listed here, please contact me.

Please include a list of the items that you are interested in,
and your full postal mailing address. Thank you!

3323. atari 1450 xld

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-23 00:00:00 UTC
From: krap@freud.psych.uw.edu.pl
Message-ID: <54lsj6$mn4@yahozna.psych.uw.edu.pl>
Source record: 79247

i'm looking for any materials about atari 1450 xld prototype. any photos, schematics, technical informations, rom dumps.
maybe someone who owns one could make a schematics and dump the roms - so almost anyone can 'build' his own one and try some of new features...
if anyone could help that project? i don't have 1450, and i'm afraid that no one in my country has one... :((

please place any helpful postings here, or to one of my email addresses. i'm also reachable via irc (efnet) on channel #atari8, nickname krap.
thanks for any help.

3324. atari800-0.6.0 - still problems with basic disabling

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-23 00:00:00 UTC
From: krap@freud.psych.uw.edu.pl
Message-ID: <54ltea$mn4@yahozna.psych.uw.edu.pl>
Source record: 79248

i have specific problem - when i run emulator in xl/xe mode, basic is turned on, as a default. when i try to run programs, that require full 48kb ram i should disable basic first. i haven't heard about such an optino. when i wrote to author about my problem, he told me, that i should behave as atari800 was real atari - holt option key while booting. it's impossible to me to disable basic this way - my keyboard buffer goes full and atari800 starts as usually - with basic enabled.
does anyone has an idea how to solve this problem? pressing key while booting is really not a good idea... :(

>i'm looking for any materials about atari 1450 xld prototype. any
photos, schematics, technical informations, rom dumps.
>maybe someone who owns one could make a schematics and dump the roms -
so almost anyone can 'build' his own one and try some of new
features...

The 1450 and 1450XLD have a built-in 300 baud modem.....

and a speech chip.....

and (on the 1450XLD) a floppy controller and drive.....

all of which run off of the PBI interface in the normal manner.

Otherwise, the graphics, sound and ports are just like the 800XL.

The speech chip is an SC-01 that you must drive with 1 of 64 speech
"bytes". You OPEN the handler and send it data - works.....

the modem is worthless. the RS-232 handler is similar to the PBI
handler in ANTIC (probably VERY similar).

the disk interface is OK, but hardly worth the effort of all that
construction.

the best thing about ANY of this was the really nice ground - plane on
the 1450 motherboard. if we had that in a 1200XL, we could jack up the
clock speed a lot easier!

[I'm assuming you were addressing me wit this message]

I don't recall off the top of my head the exact byte-by-byte changes that I made to the OS. I'd have to go look up the source code on one of my Ataris to find that out. I did actually burn an EPROM with these (and several other) changes. Once I get a little bit of free time to clear off some desk space and set up one of my Power-User Atari systems, I'd be glad to burn off copies of the custom OS.

Of course, the first thing I'll be working on, once I set up my Atari, will be a nifty little circuit for switching between multiple Operating Systems without toggle switches and possibly without rebooting.

->
```

Well to tell the truth, I bought this drive for my Atari 400 in about 1988 I believe when my Rana drive bit the big one. My 400 has 48k ram and used the P:R: connection. It worked really well for me, never had a prob with it, it was fairly quiet and it ran pretty much every disk I ever put in it. I dont have a whole lot of games on disk (under 10) for my 400 but all run ok with my 551.

The only thing was that when I got the drive, the original dos disks didnt work, cant remember what version came with the drive though, and ended up using SmartDos that came with my Rana drive originally.

Though if I could get a version of dos that came with the 551 be kind of nice as I never got to see what the differences were between the Rana SmartDos and Atari's dos.

Hope thats some help.
Keith

Thanks for the advice. But just one more thing: which chip is the CPU?
None of them actually have 6502 or 65C02 printed on them. My guess is
that it's the one labeled R6520-26 8502 with what looks like a
Rockwell logo on it. Is that right?

> : bad sectors in.
>
```

It has been many years since diving deep into this area. Hopefully, my memory will serve me well. Back then Ed Bachman (Edba) and several other members of our user group were writting mostly SpartaDOS utilities. Bad sectors on hard drives were a big problem for us. Edba had written low level and high level formatters for a variety of controllers. Most of his work, centered around the MIO from ICD. He wrote an excellent high level formatter for the MIO which created wrote a protected file called SECTORS.BAD when doing a high level format with verify. It was that formatter which he later modified and it was distributed with the Black Box.

The low level format does map out most bad sectors. On really, really old drives, this had to be done manually using data from the bad sectors table. On all newer drives this is done at a controller level and is handled by the controller Bios. They are stored on an area of the hard drive or controller dedicated to this. This area is not accessible to any high level format command or DOS! The machine language codes to do so, vary with each manufacture and even between different models. You cannot access this area of the drive with any DOS.

```

> says squat about FAT and VTOC.
>

Looking for a tutorial on the inner workings of SpartaDOS? Mike Stoliker another past member of our user group, wrote a series of tutorials on the inner workings of SpartaDOS. They have helped me and others dozens of times in re-building crashed hard drives and recovering data using DiskRx. If you are going to play with DiskRx and the FAT, it is a must have tutorial. Mike and others spent countless hours figuring out exactly how SpartaDOS works.

The discribed problem of sectors going bad resulting in a hard drive crash is something that I have personally experienced several times. There are many different possibitities for this problem. Some of these can be fixed and some can not. The worst case is when the actual hard drive is going bad internally. It can be from wear, a cold soldier joint or just gremlins. Not too much can be done about this except trying the hard drive with a different controller (if the controller is separate; i.e. MFM & RLL drives). Sometimes a particular hard drive doesn't like a certain controller, and both will work great with another.

There are some more common sources of the problem you discribe. They are things like, power glitches, signal interference, lack of proper termination, etc... Here are few things which I know that will cause the problem you discribe. They are all fixable.

1) Lack of proper termination on your cables. All SCSI, MFM, RLL and other data cables MUST be properly terminated to work reliably. Cables MUST be terminated at both ends and NOT in the middle. If you have three devices on a ribbon cable, the termination on the middle device must be removed. The BB is terminated internally. SCSC controllers and hard drives are terminated with jumpers/switchs or resistor packs.

2) A flakey power supply or glitches in your AC power being passed on. If you do not have a good, clean, and constant source of power for your system data signals can get corrupted and trash a drive. For example, a furnace or air conditioner kicking on/off can cause a voltage dip and/or spike on the electrical lines in your home. If this happens while the computer is writting to the hard drive, a hard drive crash could result. This is expecially true in older buildings. Do the lights in your home ever flicker?

3) Interference can be a BIG PROBLEM with hard drives. It can come from internal and external sources. Common sources are TV/monitors, speakers, cordless phones, electrical devices/transmitters, etc. If you

have your BB or MIO and/or ribbon cables too close to the TV/monitor, data can be corrupted. I would recommend atleast 12 inches or more to be safe. Are the cables to your hard drive short and neatly run. Never run two ribbon cables parallel to each other at close distances (i.e. less than 1 or 2 inches). Keep cable length as short as practical and away from possible sources of interference.

4) Are all your connections and cable good! Many frustrating hard drive problems result from poor connectors and/or cables. ALWAYS USE QUALITY CABLES and CONNECTORS for hard drive systems. This is definitely critical on an 8-bit Atari. Old connectors that have lost tension can cause intermitent problem.

5) Lack of unique device ID. It is possible to give the two devices the same SCSI or device ID. This is a rare occurance, but can happen during those late night sessions while swapping hardware around. Not likely, but it can happen.

I hope this helps. It can get a little confusing and complicated. Just take it, one step at a time. If you have electronics skills, an oscilloscope and a good multimeter, you can go about this a little more scientifically.

Take care, Jon

Yep, It is verry buggie.... But when you have the BBS running and take it down
you HAVE to run de UPDATE the pointer program's for the user file and the
message base files.... I have run that BBS program for about a YEAR ! ! !
And had NO problems with it.... Only when you forget to run those pointer
update program's......

DM> The best way to go though is to run BBS Express. This is easy to
DM> set-up, easy for the sysop to learn, and easy for the callers also. More
DM> importantly, it is also extremely reliable. It was released as shareware
DM> after Express Pro came out.

I think the best BBS program is BBS EXPRESS PRO, the last version is 5.0b.
with FULL ansi (16 colors) support, acsii, atascii (with the moving cursor and
ALLE extra ATSCII keys) VT52 (also color)....
I think that is the BEST bbs program for the ATARI 8bit computer....

You can try to contact the author of PRO bbs by sending a message to :

Bob Klaas <bobkla19@tcd.net> and ask him what is cost and so....

Hang around thrift stores, yard sales and flea markets. Making an
Intel or a Mac emulate an 8-bitter is a heck of an interesting hack
but it seems to me like there is always going to be some obscure
programming trick used in heavy duty games that will cause an emulator
to puke. I got a 130XE and an Indus GT drive for seven bucks in a used
computer store (they worked) and an Atari 800 and an 810 disk drive at
a Salvation Army thrift store in perfect working order for five bucks.
I built my SIO2PC cable for $10.00 in RS parts. I might also mention
I found a Commodore 1702 composite monitor for thirteen bucks in a
thrift store. Since real working machines are fairly cheap and fairly
easy to find (for the next couple of years at least), why mess around
with emulators (unless they emulate ALL programming tricks and audio
perfectly and can perhaps be "tweaked" to make Atari 8-bit
configurations that never existed for real.)?

A final note: Commodore 1702's (any NTSC composite monitor actually)
make excellent VCR monitors. We watch movies on my spare 1702 all the
time. Not bad for thirteen to twenty smackers

Tim,
See if you can get a hold of the SpartaDOS Construction Set manual.
All of this is documented in there.

3348. Re: Sound in XL-it .16

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-24 00:00:00 UTC
From: asharkis@aol.com
Message-ID: <54no02$cue@newsbf02.news.aol.com>
Source record: 79173

Funny, I haven't had any problems with sound with this emulator -- except that, although Mike Hill's samples are an improvement, the sounds are still a little rough. Nor does the user interface hang my computer. Of course, if you want to be REALLY safe, go out to DOS and run the emulator from there. But it does run under Windows '95, at least on my machine. I have to slow it down to get the action to be more like a real Atari, though.

I'm using a SoundBlaster AWE-32 with 8 megs of ram on board, which does absolutely awful things with XFormer, but works well with the other emulators. I'm wondering if making the actual sound samples with this card can improve the emulator's sound in XL-It?

3349. replaced the GTIA chip, SELECT key still doesn't work

Just wanted to mention that if you have a MacFrugals closeout store near you
that they often carry these and the Super Nintendo expansion cords. They were
like 2 for $5 or something.

3351. Atari 1050 disk drives

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-24 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <54mk4i$mt4@main.freenet.hamilton.on.ca>
Source record: 79176

Ok, I have 10 TEN 1050 disk drives I would like to sell. These include the power supply and SIO cable. $25 plus shipping.

I accept CASH or money order only.....no cheques. (Americans call them "checks" ;-) oh ya, and that is U.S. dollars. Keep in mind shipping costs from Canada are higher than in the USA. Typical charges will be around 10 dollars depending on your location.

Willy

Well actually I sent Markus some samples I made with my Pokey card
(recorded them from it to my AWE32), but he is using some sample made
by another user in his latest release.

From: mhill@one.net
Message-ID: <326ffb48.1088973@news.one.net>
Source record: 79178

All,

Ive been unable to get online much or on the computer much the past few weeks due to business travel.

Im going to catch up with alot of emails tonight.

Now on to Pokey news.

Im going to be releasing a newer version of Pokey this weekend (fingers crossed). It has the following features/fixes.

*Actual Atari Speed option.
*Support of MSDOS files from the command line. (now you can actually load frogger.exe from the command line instead of putting it in an ATR file)
*No floating point math. Hopefully those with the floating point errors will work now
*Faster Emulation (how much, I don't know.)
*Printer Support

Also coming soon (hopefully before Christmas)......

POKEY 95.

It will have all the features above and on previous versions of Pokey, but with these new features.

*Runs under Windows 95 with DirectX version 2 or greater
*Support for up to Four Digital Joysticks (like the Gravis Grip or Game Pad Pro, or Microsofts offerings). You can program all the extra keys on the joysticks/game pads for things like option/select/start/reset/space bar etc). Play Mule with four Players with these new digitial joysticks. They also don't slow your system down as much as analog joysticks (which still work also).
*Direct Video used for FAST video emulation
*Direct Sound used for Sound Emulation (also supports printer sound card)
*Nice user interface for selecting options.
*Support for plugging Atari drives into the parallel port

3354. new to this group

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-24 00:00:00 UTC
From: keith.woodworth@jybbs.com
Message-ID: <96102414003436@jybbs.com>
Source record: 79179

Ive been lurking in this group for a few weeks now to see whats going on in the Atari 8bit world. And am pleasantly suprised to find it going strong.

I have an Atari 400 that I used up till about '91 when I bought a PC. Ive still got it and it works fine. I got it upgraded to 48k of ram and bought a Rana floppy drive in '85. The Rana drive died and replaced it with an XF551. Went through 2 modems on that machine. I still use it on occasion to play a game or two. Ive got a P:R: Connection interface for it also.

Ive seen references here to emulators and such for the PC and how to hookup the Atari's to a PC. Whats this all about? I'd like to get some software from some of the FTP sites ive seen listed here, but the only way I think I could would be to get it with the PC, then download from the PC via modem to the atari. (I run a BBS also)

If there is a FAQ for this group, could someone post where it might be found?

Thanks!
Keith

I'm about 30 days away from releasing Rev 2.0 of my Atari 8bit CD. This CD will contain around 600mb of Atari 8bit usable .EXE, .COM, .BAS, .OBJ, .ARC, .DCM, .TXT, .DOC, .GIF,.AMP,.AMS,.XFD and .ATR programs.

If you run a BBS and wish to provide 8bit Atari files, then this CD is for you. If you run SIO2PC or APE, then this CD is for you.

If you have a PC or ST and wish to share files to your Atari, then this CD is for you.

Advance orders of $55.00 each are now being accepted. Please respond soon as only a limited quantity will be created. The last 50 I made (Rev 1.0) disappeard in less than a weeks time!

3361. 8-bit / 1050 drive commands

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-24 00:00:00 UTC
From: tim.keip@ix.netcom.com
Message-ID: <54mdfr$t1p@sjx-ixn10.ix.netcom.com>
Source record: 79257

Hello,
I am looking for a reference about the commands used to control
the 1050 disk drive. I have the list from my atati800 reference
manual... but that does not tell the hole story.

Commands listed:
Get $52 'R'
Put $50 'P'
Put/Vfy $57 'W'
Status $53 'S'
format $21 '!'

What about these?
???? $22 '"'
???? $23 '#'
???? $24 '$'

I assume that these have to do with the double dencity
formatting.... Etc?

I am attempting to build a harddrive interface that will
emulate the 1050 with many disks (partitions). I know that
this info must be avalible, I've seen APE and SIO2PC!

If anyone can help, Well that would save me the time of disasembling
the 1050 rom!

Thanks,
Tim Keiper

First, with the top off and power on, use the back of your finger
to feel the RAM chips. They are the two rows of 16 pin chips on the right
side of the 130XE. Feel them, are there any that are hotter then the others?
If so, replace them.
If all the RAM chips feel about the same tempeture, replace the
the CPU.

Rich Mier

I have looked... everything i can find relates to JAVA by Sun
Microsystems... NOT, repeat NOT 'JavaScript' by Netscape Communications.
JavaScript is INTERPRETED... you can view the entire source to my page by
saving it's html code...

Java and Active-X may have security problems (hence why i will not use
them), but JavaScript seems pretty stable to me.

To tell you the truth I think Netsape stinks (phew :), I started using
version 1.1, no probs there- upgraded to 2.1, yeh great- got mail now and
problems with Netscape shutting down for no apparent reason! Ok, upgraded to
2.02- even more probs shutting down!!! Ahhh what the hell- upgraded to
version 3.0- Damnit Netscape shuts down ALL the TIME!!! I went back to version
2.01 and I'm still using it now- it still has problems but nothing like I
had with the higher versions. I'm running DOS 6.22 and WIN 3.11, so I have to
use WIN32S to run Netscape- I think the problem lies in the fact that Netscape
IS a 32 bit program trying to run on an EMULATED 32 bit system. My brother
is running a pentium 200 PRO with WIN 95- and he hasn't had ANY problems with
Netscape 3.0 for WIN 95 (sure wish I could afford a PENTIUM PRO!!).
As for the download speed, I am using a 14.4 modem, and on a really good day
I get transfer speeds up to 1.2k a sec. On REALLY bad days, 52bytes a sec-and
that is SLOW going I'll tell ya!! Maybe You should consider upgrading your
motherboard to 486+? That'd help your transfer speeds immensly......

I don't know which version of Diamond you are using..but, I believe
the command line it the solution..oh, I think you can talk to the
author.. I have seen him here on Freenet from time to time..as for
Diamond being on cart..yes. I have a cartridge version. Very frist.
The problem I have with Diamond is that is was not very Sparta Dos
friendly. I mean..I like being able to hit the reset key to get back
to the Dos Prompt. No Atari Dos other than Sparta is best at this..
That was the sole biggest problem with the 8-bit. Dos was not the
concern..for most programs and games designed for it. If you could get
back to DOS without turning off the computer..that was to me a Plus if
you could ges back to Dos. You don't even need a stupid DeskTop like
Diamond for 'Point and Click' operations if you could Type and Read
to some degree. Well, Heck, as for games..there was always Boot Disk
programs...

Anyway..are you using an MIO or BLACKBOX to interface your 8-bit??

> guarantee a stable reset of the computer.

Errr...I thought the XE had a built-in delay on that line, so it should
not matter. I have the full set of technical manuals, and docs on the
130XE are quite poor.

> Does anybody (Bob? Are you reading this, Bob?) know the timing specs for
> the 130XE?

Mr. Klaas is a chip-swapper. He knows very little about how the machines
actually work.

> second reset cycle.

> Anyone have any input on this?

Well, on mine that is NOT how it works. Pressing the reset button on my
130XE keeps it in reset mode until I let go of the key. I will check the
schematics when I get home and see if the RESET line appears to go
directly to the hardware reset lines or if there is some sort of delay
circuit.

>

Yeah, I copied a LOT of my carts to disk back in the early 80's.

First of all, USE AN 800! A REAL 800, not an XL.

Several programs are out there that will read the cart from the right
cartridge slot. If you are lucky, you can get the cart in without
crashing the system. Otherwise, place some tape over the 5V pin on the
cartridge connector (I think it is pin #13), or, better yet, modify the
computer to put a switch on that pin. Suprisingly, you can usually read
the ROM chip into the computer without power to the ROM.

Some carts use copy protection that tries to write over the cartridge RAM
area. If this is the case, you will have to either remove/relocate the
offending code or install a dummy cartridge.

When I get around to it, I am going to burn my most used carts onto a
single ROM (or a few ROMS (BIG ones!)). Then I can leave the "master
cart" plugged in and choose a cartridge with a flick of a switch. My
motherboard is mounted in a rackmount case, so to insert a cartridge now
requires a screwdriver! I need to fix that...

Erm, this is 'comp.sys.atari.8bit'... so somehow i doubt if they are for the Jag... if they are then the original author cross-posted to the wrong group as well...

If they are Atari 8bit cables (which i am assuming they are) then they will work on a Jag ONLY if the jag uses a 9-DIN connector on it's joystick ports (i can't remember if it does or not) and the extension cable MUST have *ALL* nine pins connected in the cable.

: The Doctor

Easier said than done! Disk Rx has NEVER worked for me in regards to fooling
with the FAT. It is a great way to really screw up your partitions. I have
studied the book in the past, and made modifications which I thought would
help, but they didn't. Then, I started asking around and many people had
very little luck with Disk Rx.....however, it seems to be the most common
advice, even from those who don't know how to use it....."use Disk Rx,

and rebuild your FAT"....yeah, right! Disk Rx is only good for snooping around a disk drive. Maybe someone should write a tutorial on how to modify things with Disk Rx....cause I have the Disk Rx manual, and it says squat about FAT and VTOC.

3380. defrag program for SpartaDOS and other Atari DOSes

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-25 00:00:00 UTC
From: rely@ix.netcom.com
Message-ID: <54q7g3$fmr@dfw-ixnews2.ix.netcom.com>
Source record: 79193

Has anyone built a disk defrag program that will work on SpartaDOS formatted disks, especially hard drives? I have chkfrag.com and that's nice to see how bad it is, but it seems there is a need to be able to fix fragmented diskd. I suppose it would be easier to build it for SpartaDOS over other AtariDOS formats, but one for MyDOS would be cool too. Anyone care to try building one. Sometimes I wish I had had the time to learn Assembler. Maybe someday...

>Though if I could get a version of dos that came with the 551 be kind of
>nice as I never got to see what the differences were between the Rana
>SmartDos and Atari's dos.

Well, some XF551's came with Atari DOS 2.5, and some came with something called DOS XE. The 2.5 is much more universal. The DOS XE was cumbersome, not totally compatible with other versions, and eventually went the way of DOS 3 for most users. It could format disks in DSDD, but so could MyDos and SpartaDos. So, there's nothing that interesting about the DOSs that came with the drive.

The drive itself has proponents and detractors, just like anything else. There are a couple of design flaws, but at least it will take fairly standard mechs if they go bad, and there were several schemes to modify it (replace the 5.25 with a 3.5, add a 3.5 on top with or without a cooling fan, make it format the back of flippies, etc.) -- some commercial and some home-brew. I use an unmodified one as D1: in my system, together with a couple of 1050s. XF-551's have no "power on" light, and the busy light goes on for only a second when the drive powers up. Add to that its _VERY_ quiet operation, (compared to other drives) and you sometimes don't realize that it's powered up. Some people have had trouble with fragile boards and SIO connectors; I haven't because I've been very careful after hearing the horror stories. If I'm going to take the drive some place, I leave the SIO cable connected. The problems switching densities also seem to vary with the DOS you're using, but the ability to have DSDD storage makes up for that problem, IMHO.

The color schemes of the XF551 and the 130XE are the same, but the plastic seems to vary between a light beige and a grayish color. The two harmonize.

The Jaguar joypads use a 15-pin high density connector. It's the
same size and shape as the DB-9 connector used on the 8-bit Atari
joysticks, but it has three rows of 5 pins each.

3385. Q: 130XE chip layout

First off, I would like to thank all the respondents to my post asking for help on repairing my 130XE. I appreciate your help.

Second, could somebody describe to me which IC on the 130XE PCB is the CPU? This may seem like a stupid question, but none of the chips have 6502, 65C02, or 6502C printed on them at all. I have checked the ftp sites and web pages, but none have any chip layout documentation. Thanks.

Keyboard connector broken (Pin 21)? Next is a series
resistor, R135, 370 Ohms. Then the signal goes directly to the GTIA
chip, pin 13. This is a sigle foil net.

KB pin 21-------->R135-------->GTIA pin 13.

No, the POKEY doesn't handle the START, SELECT and
OPTION keys.

All Items have been tested and are in good condtion
unless Stated.

Shipping, mostly by US Priority mail, had excellent
results. $3.00 to $8.00 shipping charges.

Payment, Checks take 8 days to clear, Money orders
are shipped same/next day, COD with $5.00 deposit
only.

Hardware:
3 800xl's with power $25.00 each
2 1050's with power and cable $25.00 each
1 130XE with power $45.00
2 810's with Archiver installed PS/CB $25.00 each
1 B&C 810 with happy V7 PS/CB $35.00
1 B&C 810 PS/CB $22.00
1 1027 with PS/CB extra ink roller $15.00
1 XM301 $ 4.00
1 XMM801 nice printer! $20.00
1 RamPOwer 32k for 800/400 doc/box $10.00

Software:
The book keeper, complete $ 7.00

Much more to follow!

The Atari 600XL came stock with 16k of memory, not enough memory for DOS
to work properly. I would suggest trying the drive on a and Atari 8-bit
with atleast 48k of memory. I have a 600XL which was expanded to 64K
and it works great with the 1050 disk drives.

3393. Re: Old Adaptec 4070 Bridge Controller

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-26 00:00:00 UTC
From: dremu@emf.net
Message-ID: <54tb97$52o@emf.emf.net>
Source record: 79070
Cross-posted to: comp.sys.atari.8bit,comp.periphs,comp.periphs.scsi

Barry Gordon (bgordon@ecst.csuchico.edu) spoke thusly:
: I'm looking for some info on the old Adaptec 4070 controller.

: I just pulled an old system out of the closet and am having trouble
: reading my hard drive. The computer (an Atari 8-bit) has a SCSI port out
: the back (thanks to a 3rd party device called the Black Box) which is
: connected to an Adaptec 4070 which is connected to a Seagate 277-R.

<snip>

The ACB-4000 series were not controllers per se, but "bridges". Generally SCSI on one end (occasionally SASI?), the other side would be two or four MFM, ESDI or (in your case) RLL drives.

What you have is a ~60MB SCSI drive in effect, as the bridge just makes the RLL "turn into" SCSI.

Sort of. Honest appraisal: 60MB is worthless. If you want to use the thing, throw it out and go find a 100MB SCSI disk surplus for $10. This thing is not worth the hassles (and lack of info - i.e. Adaptec has little or none; try their faxback, they won't tell you ANYTHING in person).

Now, if you're just hacking around, stay tuned. The two or four drives show us as LUNs on a selected ID; there should be labelled jumpers to set the ID. The other jumpers set parity options and such; leave them as they are for now. The Adaptec faxback might tell you what the others are, or I _might_ have that stuff buried somewhere. If you're nuts or bored enough to try, email me and I'll see what I can dig up. The drive itself must be low-level formatted with special data on the first tracks so that the bridge can read into itself on powerup the geometry of the drive to report it across the SCSI bus. DO NOT reformat the drive without using the bridge. (BTW, good lucking on formatting it WITH the bridge! <g>)

That should keep you busy for a while; in general, with the bridge, your drive should appear to be SCSI in all respects. Should. YMMV.

I have two 48K Atari 800s. I would like to modify one of them with a 130 XE compatible memory upgrade (to at least 128K but more would be nice.) I would also like the ability to switch in the XL/XE operating system. Does anybody know where I can find the information to do these things. I am an electronics tech and soldering and taking things apart doesn't bother me. I just need the info and plans to accomplish my nefarious 800 mangling schemes.....

3395. NEEDED: WORKING ATARI 800 KEYBOARD

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-26 00:00:00 UTC
From: ajbufort@red.seas.upenn.edu
Message-ID: <54tiin$q4r@netnews.upenn.edu>
Source record: 79072

Hi folks...

The other day I took apart my trusty old 800 to make adjustments
to the springs in the keyboard (some of the keys weren't working, and
stretching the springs seemed to help make the key-to-circuit connections
more effective.) Just as I was putting a _working_ keyboard back
together, one of the wires from the keyboard to the main board snapped,
and the others looked like they were so weak they were ready to go, too.
So I removed them all and attempted to solder in all new ones.
Unfortunately, in the process of doing this, I melted off one of the
copper leads on the circuit board (in my opinion, beyond repair, and by
that I mean _not worth my effort_.)

To make a long story short, if I can get my hands on a working
800 (or at least, an 800 with a working keyboard), I can remove the
keyboard by its roots (i.e. the black socket which connects it to the
main board) and simply snap that one into my baby. :)

Is there anyone reading this who can help me out??

-Tony

Sorry to pick nits, but in truth the ACB-4000 *is* a controller.
In strict SCSI terminology, a "controller" is what interfaces a drive
to the SCSI bus. A "host adapter" is what goes inside your computer
and interfaces it to the SCSI bus.

Anyone who says otherwise is itching for a fight.

> worth the hassles...

Worthless on a PC, perhaps. But since it's connected to an 8-bit computer where the average program size is 5k - 20k, it's MORE than adequate. Has been for years!

> <bunch of general and formatting info snipped>

Yes, I'm well aware of how the drive, controller, and computer are connected and how they interoperate. I've had this system for about 10 years. It's just been in the closet for a year. I pulled it out the other day and set it up. That's when I discovered I couldn't read the drive.

> If you're nuts or bored enough to try, email me and I'll see what I can dig
> up. The drive itself must be low-level formatted with special data on the
> first tracks so that the bridge can read into itself on powerup the

> the drive without using the bridge. (BTW, good lucking on formatting
> it WITH the bridge! <g>)

If I'm nuts enough to set up my old 8-bit machine next to my Pentium, then I guess I'm nuts enough to want the information! ;)

The drive is already formatted and has been in use on this machine for years. On powerup, the controller "boots" the drive just fine (I know it's not really booting, but that's the most descriptive way to describe the sound of the powerup sequence. When I fire up the computer, it accesses the drive/controller, but no information is returned. Loading up a sector editor, I tried to read sectors from various parts of the drive. All returned a NAK. Each read attempt makes the drive grind a little bit like it's confused about the request.

Unfortunately, the only other known working bridge controller I have is an Adaptec 4000 which won't read the RLL drive properly. Thus I can't do a swap-test to see if the controller is bad. Hence the request for the diagnostic info. If you've got anything, I'd really appreciate it. I've got a full set of docs for the Adaptec 5500, but the board is a bit different than the 4000 and 4070. At the minimum, the jumpers are labeled

differently, so the 5500 diagnostic info doesn't carry directly over to
the 4070.

Oh, and by the way, I've already been on their web site. I am aware that I can order an "installation manual" from their "obsolete products" department. But that's not going to help troubleshoot the existing product.

That's correct because the Atari P/N is actually a "custom"
version called the 6502C (NOT 65C02). A standard 6502 won't work in the
XL/XE's.

3405. Re: Q: 130XE chip layout

On Fri, 25 Oct 1996, Tony Pillo wrote:

> Second, could somebody describe to me which IC on the 130XE PCB is the CPU?

I'll go ahead and run through all of the major chips, though some might be obvious:

Looking at the motherboard from the front:

The two columns of 16-pin chips on the left are the RAM chips. These are probably labeled 4264. The left column is the main RAM, the right column is the extended RAM.

The 40-pin IC below the RAM chips is the FREDDIE chip. That's the one responsible for most of the memory management. It should be labeled CO61991.

Moving on to the column of 40-pin ICs in the center of the board, the top chip is the CPU. It should be labeled CO14806.

The next one down is the ANTIC chip. It MAY be labeled CO21697 (there were a couple different ANTIC chip models).

Next in line is the GTIA chip, labeled CO14805.

Below that is the 28-pin OS ROM chip, probably labeled CO61598B. It should also have a marking similar to 23128.

Below that is the 24-pin BASIC chip, labeled CO24947.

Finally there are two more 40-pin ICs on the right-hand side of the board. The upper one is the PIA. It should be labeled CO14795.

Finally, below that is the POKEY chip, labeled CO12294.

3406. Re: Necromancer!

Source record: 79083

Howdy

All this talk of Necromancer got me wistful and misty-eyed, so I broke it
out and played a few games last night, and here's what I have to say:

Holy ^*#$(, it's freakin' hard! What a FAST game!

The 1st 2 times I played, I tried to squash all the spider eggs (on the 2nd
stage) and kept getting hosed.

3rd time I played, I booked through the 2nd stage & ended up very confused on
the 3rd stage, not figuring out until too late that I was supposed to collect
the headstones.

Strategies:
Here's a good tip for the first, tree-growing level. Put a tree in the top
left corner and keep your wisp on it until it's grown. Then do the same
in the top right corner. Now you've got the whole top row protected from
the goblins. Put your wisp up in the corner, hold down the fire button, then
move the wisp inward and, as soon as it's clear of the corner tree, it will
plant a seed right next to the full-grown tree. Repeat until you've got the
top row full, then start on the bottom row.

Questions:
OK, on the first stage, you're supposed to just grow as many trees as possible
to use for egg-squashing on stage 2.
But, what's the motivation on squashing eggs in stage 2? The more you squash,
the fewer spiders will appear on stage 3 or something?
And, as for stage 3, how many times do you have to clear the field of
headstones? Why are some of the spiders flashing (and invincible)? Should
you be going after spiders and the Necromancer, or the headstones...?

What a game!

3410. Preserving ancient floppies...

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-26 00:00:00 UTC
From: ziggy29@netgate.net
Message-ID: <ziggy29-ya023080002610961357480001@nntp.netgate.net>
Source record: 79087

I have a lot of floppies for the 8-bit which contain copy protected software. These aren't things where I could just copy the disk to make a backup.

I'm getting worried about "bit rot" on these floppies. I live in mortal fear of my M.U.L.E. disk becoming unreadable, because I can't make an archived backup copy.

How have some of you managed to get around this? Is there any way to do it using only 8-bit hardware and software? I'd prefer a solution that doesn't require file transfers to and from a PC or a Mac, but if that's all you know, I'd like to hear that as well.

Thanks!

3411. Mac to 800XL file transfers

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-26 00:00:00 UTC
From: ziggy29@netgate.net
Message-ID: <ziggy29-ya023080002610961354200001@nntp.netgate.net>
Source record: 79088

I currently have no way to directly access a shell session (I think
I have to use PPP for all my activity--I can telnet to a command line,
but that won't help). If worst comes to worst, I'm thinking I may have
to download files to my Macintosh (using Fetch and saving as "raw data"),
and then find a way to transfer these files to my 800XL.

I see a lot of discussion about connecting a PC and an 8 bit, but
nothing about a Mac. Has anyone done this?

Hmm... Perhaps I'll have respect for so-called 'private' Email when I
receive some Email that deserves respect?

I guess the recent political influences have driven you to "go negative".

;)

Y'know, I didn't even realize how poorly I had worded that. I agree with you totally. I hate it when people ask only for direct responses. If you look at the original message, you'll see I posted it at 2am. Obviously I wasn't thinking too clearly. What I had in mind was a cc: to Email.

> It also suggests that you couldn't be bothered to read
> the group after posting, to see any follow-ups.

I wanted to post the request to many newsgroups to which I don't normally subscribe. But I ended up only putting it in a few so I went ahead and subscribed to them immediately afterward (and have received the responses posted therein).

> Usually, when I see a request like yours, I just skip it;
> even/especially when I *do* have the requested info.

I agree. I'm terribly embarassed that I did exactly what annoys me so much when others do it.

> Think about this next time you need help from the Usenet community.

I guess my lesson is: don't post requests at 2am. I'm one who always thinks messages through and proof-reads before posting them. Again, I apologize for my apparent (but completely unintentional) lack of sensitivity.

Like the VGA ports on PCs? Since theyr'e fairly common, extension
cables shouldn't be too hard to find.

You have to switch the drive off before pressing start - sorry I don't
know how you do that on Xl-it.

Hi,

I'm asking a question for a friend who has an Atari 800XL and Atari
1040ST.
He also has a 486DX33 and wants to know if there is any software that
will allow him to READ and WRITE to the Atari formatted disk with the
IBM. I've heard of a program (some years ago) that is supposed to be
able to allow this process between formats but have never seen it...
so don't know how true this is either.

I've managed to help him a little by explaining how to change the
first 3 bytes of the Atari ST formatted disks (make them EB 34 90).
However, if there is anything quicker, we'd appreciate knowing.

ALSO... we'd like to know if there's something which will read the old
Atari 800XL disks (5.25").

Any and all comments, replies, etc will be appreciated.

Thank you.

Wow... we've already reached 100 Hits... ok, it's not that big a deal...
but it's nice to see ppl coming and checking around to look... please keep
checking, the page is being updated practically daily...

NEW FEATURES:
* there is a malto: link at the bottom of the main page now
* gives an error if JavaScript is not enabled and tells you how to enable
it
* added a sub-table of contents to the 8bit Power! page

COMING SOON:
* actual reviews and ratings...
* the 'Submit' tab will be working so i can begin adding reviews
* the other areas of the site will grow and grow...

WANTED:
* any and all online docs in a text/html format
* and and all atari 8bit game documentation/cracks/cheats/easter eggs
* anything you think would be good for the site

I am not creating this site only for myself but for all the 8bitters out
there...
...tell me what you would like to see and I will try to add it!

I'm looking for some info on the old Adaptec 4070 controller.

I just pulled an old system out of the closet and am having trouble reading my hard drive. The computer (an Atari 8-bit) has a SCSI port out the back (thanks to a 3rd party device called the Black Box) which is connected to an Adaptec 4070 which is connected to a Seagate 277-R.

Might you have a copy of some docs or know where they could be obtained? If nothing else, I'd like to put the controller into diagnostic mode and interpret the results. Please Email me with any help you might be able to offer. Thanks much!

Yes, a VGA extension cable can work fine, BUT you must be sure it
has all of the pins connected. Most of them do not since VGA doesn't use
all of 15 lines.

Message-ID: <32733e55.593329@news.demon.co.uk>
Source record: 79094

Hello fellow Atarians..

Im looking for anyone in the UK who either makes the 2 APE cables or can provide an exact pinout diagram for the cables.

The type of diagram I want is one that points out the SIO pins to use rather than using the sio wire colours. Reason being for this is that I have 2 sio-sio cables that have completely different colour wiring layouts....God know which one is right as some colours match the APE diagram on Steven Tuckers page on both leads....

If you make cables in the UK (pref London) then let me know. I sent money to a guy in this NG in the USA and waited for the cables to arrive but heard nothing except he was awaiting a chip..He has not cashed the money so he is an OK bloke BUT he has not contacted me to tell me the state of affairs...(1 month in a few days)...Sorry Rick Z I need them now :-((

Can anyone help??

Thanks...

Paul `Mclane` Irvine

PC, PSX , Atari8bit & C64

Some parts for the 130XE

CPU (U8) 14806
Antic (U7) CO21697-01
Gtia (U17) CO14805-22
Pia (U23) CO14795-12
Pokey (U22) CO12294-01 or -22
Freddy (U6) CO61991-29

Rams U9-U16..
Ram Pin check with a Logic Probe
Pin 1-H Pin 2-P L-Low P=Pulse H-High
Pin 3-P Pin 4-P
Pin 5-P Pin 6-P
Pin 7-P Pin 8-H
Pin 9-P Pin 10-P
Pin 11-P Pin 12-P
Pin 13-P Pin 14-P
Pin 15-P Pin 16-L

If your computer comes up with a Black Screen more than likley it is one of the first bank of Rams, but could be in the second bank also..not likely but have seen it happen. If you do not have a logic probe to check them then find the hot ones will be real hot...replace these first and continue if computer does not come up..

If you have a black and white horizontal line in the middle of your screen and everything seems do be scrunched into this line..your power supply has crapped out..

Hope this helps someone in their efforts..
Bob

Here is what I have for the 4000a, should work for the 4070. With
nothing connected to the board. Power it up with jumpers O-P installed.
If the board is functioning properly the LED will flash continuously
with duration of 0.5-1.0 seconds per flash. If there is a problem with
the controler the LED will stay on for six seconds, flash once for one
second (notatint the start of the diagnostics), and then flash in 0.5
second bursts. This will then be repeated as long as the O-P jumper is
installed. The number of 0.5 second burst is the error code. These
error codes are detailed below.

Error Code Problem Area
(Number of 0 5 second bursts)

None 8085 Subsystem
1 8156 Ram
2 Firmware
3 AIC-010 and Related Logic
4 AIC-010 and Related Logic
5 AIC-300 and related Logic
6 AIC-010 Bus

Continuous Bursts of 1 sec, 1 sec,
1/2 sec (without six-second flash Controler Passes Self-
and one-second Flash) Diagnostics

I have not looked at a 4070 for a while but am sure it has the O-P
setting..

Hope this helps...
Bob

3434. Re: 1050 and 600xl

Newsgroup: comp.sys.atari.8bit

Try using Atari Dos 2.5 or Sparta Dos, his message which you replied to said he had a 130XE Boot Disk, this will not work on the 600XL or the 800XL..130XE compatable machine only..

Bob..ya I know its late/early?

3435. Looking for "Excalibur"

I remember this game! If you can make it work with a ram disk, it's a lot of fun. Maybe using 3x APE speed would cut the waits down enough between scenes. Otherwise, the going to floppy disk constantly was kind of a drag.

Just go to a used computer store and ask for monitor extension cables for
a PS/2.

-
- Thanks!
-

Yeah, I guess you could say we "Got around" it. Removing the copy
protection manually is more like it. If you want to preserve the copy
protection and still have a disk image runnable on an Atari, you need
a Happy drive to backup the software. If you want to preserve it on a
PC, you need Ape (registered, I believe) to create an image usable
with Ape that emulates the copy protection. Or you can check the atari
archive and see if the so called "cracked" version is already there.

3439. 60 Hz to 50 Hz: Problems?

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-27 00:00:00 UTC
From: liebetruth@aol.com
Message-ID: <550ch0$g2p@newsbf02.news.aol.com>
Source record: 79102

Living in Germany, bought a 1050 in USA and got a power supply for your standard (110V,60Hz).

Question: is it a problem to change the power supply against another transformator (from 220V to 9V AC instead of 110V to 9V) or does somebody know how to solve that problem?

Everything would help, thanx

3440. Help with SIO2PC cable.

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-27 00:00:00 UTC
From: Brian Burns <b_burns@ix.netcom.com>
Message-ID: <3273C4F4.2D4@ix.netcom.com>
Source record: 79103

I have been trying to build this SIO2PC cable for the last three weeks. I have a diagram by Nick Kennedy which
uses the MAX232 chip and a diagram by Rick Cortese which uses the 1489 chip. I completed both of the circuits
and tried both. When I run SIO2PC and boot my Atari 800XL, SIO2PC's status line shows that the Atari is trying
to access it, but I still can't access anything on the PC(486DX/133). I have tried this with and without the
floppy drive connected to the Atari. Does anyone have any tips or hints on how to trouble shoot this problem.
What pins should I use on a 25pin serial port (I used to know, but I haven't messed with serial ports in
almost 3 years). The pins I am using are 2, 3, 7, & 22.

Brian Burns

You have a 16k computer, dos 2.0, 2.5 or sparta may load but you will not have much left..You are attempting to load a program written for a 128k machine, it will not run on your computer, nor will it run on an 800XL unless it has been modified/upgraded.

bob

In <326E8DBC.7FD2@erols.com>, "Jonathan C. Mordosky" <mordosky@erols.com>
wrote:

: There are some more common sources of the problem you discribe. They
: are things like, power glitches, signal interference, lack of proper
: termination, etc... Here are few things which I know that will cause
: the problem you discribe. They are all fixable.

: 1) Lack of proper termination on your cables. All SCSI, MFM, RLL and
: other data cables MUST be properly terminated to work reliably. Cables
: MUST be terminated at both ends and NOT in the middle. If you have
: three devices on a ribbon cable, the termination on the middle device
: must be removed. The BB is terminated internally. SCSC controllers and
: hard drives are terminated with jumpers/switchs or resistor packs.

: 2) A flakey power supply or glitches in your AC power being passed on.
: If you do not have a good, clean, and constant source of power for your
: system data signals can get corrupted and trash a drive. For example, a
: furnace or air conditioner kicking on/off can cause a voltage dip and/or
: spike on the electrical lines in your home. If this happens while the
: computer is writting to the hard drive, a hard drive crash could result.
: This is expecially true in older buildings. Do the lights in your home
: ever flicker?

: 3) Interference can be a BIG PROBLEM with hard drives. It can come from
: internal and external sources. Common sources are TV/monitors,
: speakers, cordless phones, electrical devices/transmitters, etc. If you
: have your BB or MIO and/or ribbon cables too close to the TV/monitor,
: data can be corrupted. I would recommend atleast 12 inches or more to
: be safe. Are the cables to your hard drive short and neatly run. Never
: run two ribbon cables parallel to each other at close distances (i.e.
: less than 1 or 2 inches). Keep cable length as short as practical and
: away from possible sources of interference.

: 4) Are all your connections and cable good! Many frustrating hard drive
: problems result from poor connectors and/or cables. ALWAYS USE QUALITY
: CABLES and CONNECTORS for hard drive systems. This is definitely
: critical on an 8-bit Atari. Old connectors that have lost tension can
: cause intermitent problem.

: 5) Lack of unique device ID. It is possible to give the two devices the
: same SCSI or device ID. This is a rare occurance, but can happen during
: those late night sessions while swapping hardware around. Not likely,
: but it can happen.

: I hope this helps. It can get a little confusing and complicated. Just
: take it, one step at a time. If you have electronics skills, an
: oscilloscope and a good multimeter, you can go about this a little more
: scientifically.

: Take care, Jon

Thanks for the extensive advice....however, it is none of the above.

The drive works on many of its partitions like a champ....there are just some areas it refuses to write to....right in the middle of a 16 meg partition....somewhere....

:-)

Willy

Try comp.sys.atari.st this is the group for 8bit atari's. The ST is a
16bit machine.

>almost 3 years). The pins I am using are 2, 3, 7, & 22.

Those sound like the correct pins. Have you tried APE instead of SIO2PC?
I seem to remember that SIO2PC has some timing problems that can bite you
if your machine is significantly faster than what it was designed for.

If you could provide a netlist of the connections you have made on both
your interfaces that would probably help. On the MAX232 version, be sure
to provide all the appropriate external capacitors if it is a normal
MAX232, or else the chip will not be able to generate true RS232 voltage
levels.

Do they have ALL 15-pins connected? Most VGA extension cables do
not. In fact, most of them don't even have all of the pins.

Well, I have a copy of the game EXCALIBUR.
If you want it just reply to me via Email- I think thats easiest.

stevo <stev@networx.net.au>

You could try YOGI's ATARI ARCHIVE....
His Homepage is

http://mars.superlink.net/scharles/

and his FTP site for megazillions of ATARI softWARE is....

ftp3.cyberspy.com/atari8/yogis_site

I think you would probably find everything you want for yer
ATARI here, I'm still sending software to YOGI myself..

Have fun....

3454. Re: 1050 and 600xl

>and then things go crazy. Anyone have any pointers?
>

Well, that certainly doesnt sound right. The 1050 D/D is compatible
with ALL 8-bit ATARI's, so no problems there.. Hmmm 600xl, Do you
know if it has been upgraded to 64k? The 600xl standard is 16k- NOT
enough to boot DOS I think. The only recourse is to find someone with
an upgraded computer, say a 800xl or 130xe, and connect your D/D to
it to test the disk you are trying to boot... Then you will know if it
needs more RAM... If this is the case I'm sure someone on the
newgroups could help you with finding a RAM module for the 600xl.
Good luck.

3455. Re: Preserving ancient floppies...

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-28 00:00:00 UTC
From: stev@networx.net.au

>to do it using only 8-bit hardware and software? I'd prefer a solution
>that doesn't require file transfers to and from a PC or a Mac, but if
>that's all you know, I'd like to hear that as well.

Well, there are a few options available.
You could download the UNprotected versions from
YOGI's ATARI ARCHIVE located at

ftp3.cyberspy.com/atari8/yogis_site/

but of course these are mostly in ATR format, which
requires the SIO2PC cable connected to your PC
(I have the cable myself and its exellent)
If you want some info on the SIO2PC cable try

www.hackerz.com

and go to the ATARI RETRO SITE link.

Another alternative is to buy/beg/borrow/steal (not really)
a HAPPY 810 or HAPPY 1050 disk drive with the HAPPY software.
This is about the only way to make true copies of ALL your
protected disks. I have only got a HAPPY 810 drive, so the
1050 is unknown to me (I have 3 1050 drives with US doublers tho)
Hope this was a little helpful for you....

Well, I cannot help with the ATARI ST problem, but I have a PC file
which will read & write ATARI 8 BIT disk formats in double density,
on a PC 360k/1.2mb 5.25" disk drive. This really works best using a
360k disk drive, as the 1.2mb has a few hiccups trying to read or
write any ATARI disks..
As far as I know, this will ONLY read/write double density, so I guess
most of the disks will have to be converted to D/D before they can be
used! I hope this has been usefull.
The file "ATARI.COM" should be attached, usage for it is displayed
when run...

3457. looking for crystal castles + system

Newsgroup: comp.sys.atari.8bit

i am shopping for crystal castles and a system to play it on.

i would like your opinion on the best system for this game. Also do any
of the systems support trackballs??

I am a clueless newbie when in comes to 8bit atari's so you might have to
speak clearly and slowly but i will catch on

thanks in advance.

please respond by email if convenient.

pete

-Questions:
-OK, on the first stage, you're supposed to just grow as many trees as possible
-to use for egg-squashing on stage 2.
-But, what's the motivation on squashing eggs in stage 2? The more you squash,
-the fewer spiders will appear on stage 3 or something?

Correct.

-And, as for stage 3, how many times do you have to clear the field of
-headstones? Why are some of the spiders flashing (and invincible)?

Yes, you need to clear the field. Watch your strength. Every time a spider hits you OR you hit a spider with your wisp, you lose strength.

Should
-you be going after spiders and the Necromancer, or the headstones...?
-

Go after the headstones. After you clear 5 fields of headstones, you get to see the ending. (Wasnt worth the 9 months it took me!)
I used to have a patch to let you cheat.........

-What a game!

From: darrins@cyllene.uwa.edu.au
Message-ID: <5510o3$abq@enyo.uwa.edu.au>
Source record: 79122

Years ago I had a neat util that would install a boot sector menu file loader
onto a DOS disk without needing to reformat the disk ie saving all your files.
It was great for loading games cause it lived in the cassette buffer so
it would load just about anything.
Anyway I've lost it and can't recall what it was called so If you've got it
please e-mail me or uuencode the installer and e-mail it to me.
It had two versions one for 400/800 and one for XL/XE the only difference
being that the 400/800 cycled the color registers direct while loading
and the XL/XE used the shadow color registers.
Oh yeah part of it actually resided on the directory sectors therefore
limiting the number of files you could have but it wasn't usually a problem
for game disks with only 4-5 files on them.
Thanks in advance!

ps. the display was in GR.2 and the name of the file you selected changed
to GR.1 while is was loading (as well as cycling the colors!)

: uh,who the hell is Disk Depew ans why is he deleting other people's posts?!?

Richard E. Depew cancels binary posts to all of the Big 8 newsgroups (i.e., the comp, soc, sci, rec, talk, misc, news, and humanities hierarchies). He's something of a net.legend. He wrote a cancelbot dubbed ARMM, for "Automatic Retroactive Minimal Moderation". Retromoderation is a hideously bad idea, but he eventually unleashed his bot on us all.

It ended up cancelling its own posts.

While it does sound silly, the result was a horrible traffic jam because of the status reports that it issued on each post. It would add "ARMM! " to the beginning of the subject line, some notes at the beginning, and the message plus full headers after that. You ended up with tremendous postings with subject lines such as "ARMM! ARMM! ARMM! ARMM! ARMM! ARMM! ARMM! ARMM! ARMM! ARMM! etc." If you think about it, it sounds pretty funny, but it wasn't for a lot of people, because they paid by the byte.

Anyway, he still supports retromoderation, but he's taken to cancelling binaries quite nicely. See the net.legends FAQ for more info.

I wonder if anyone out there has tried to implement a cheat on Necromancer. I did this a few years ago (which means, of course, I have no idea where the cheat version is now). The problem was if you make yourself invincible, you cannot finish the first stage, as you effectively need to die to end the first stage.

The details are vague, but I remember I got round this by having a cheat dependent on the second joystick trigger. So on the first round you have to hold down the trigger to play as normal, and then for the rest of the game you don't touch the second joystick trigger and are thus immortal.

This does mean that I've seen the end of the game. Anyone else seen it?

If you have trouble finding one sold explecitly with all 15 connected,
try looking that the REALLY cheap vga extension an cables. Some of them
have all 15 connected, but dont say so. I purchased a couple lots of these
for a job on IBM computers and I had to break a pin off every one since
the IBM VGA port only has 14 holes :)

Well, not quite, but you gave 'er one heck of a try. My German is
exceptionally rusty, but here's what I can make out:

Hello folks,

You can come all <sumthinorother> on Saturday, 26 October the [yearly or
yearround... not sure which] Abbuc Reunion <sumthinorother>.

I can't make out enough of the rest to make sense (like the last stuff
did??? right... ;-) ) but if I have time, I'll get out the ol'
dictionary at home.

BTW, to say you don't speak German in German, try this:
<< Ich spreche keine deutsch. >>

and to ask a German if he *can* speak English, try:
<< Konnen Sie english sprechen? >>

To ask a German to speak English (there is a difference!) try:
<< Sprechen Sie english, bitte. >>

Hope this helps!
```

> Everything would help, thanx
Hello,

I live in France. Here, we also have 220V and 50Hz.

I have several 1050 that I bought from people in USA and I can tell you
that there is no problem using an european power supply (220V/50Hz) with
an american 1050. There is also no problem using a converter from
220V/50Hz to 110V/60Hz to use the 110V/60Hz power supply that comes
along with an american 1050. Both ways work well (at least fo me).

Hope it will help you.

Eric.

3470. New Powerful Disassembler

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-28 00:00:00 UTC
From: Eric BACHER <ebacher@teaser.fr>
Message-ID: <32755B69.28F2@teaser.fr>
Source record: 79133

Hi everybody!

I have finished an Atari 8-Bit specific 6502 disassembler designed for both Windows 3.1 and Windows 95. It's called DIS6502: 6502 Disassembler for Atari.

My software represents a new approach for disassembling Atari programs or boot disks, it is an interactive and iterative process (not a batch process on which you have no control).

The goal is to generate a listing __ready to assemble__ with your assembler.

The features for the unregistered version are:

- Complete disassembly of
+ Atari binary files (stand alone executables),
+ Atari binary files within .ATR/.XFD disk images,
+ Boot sectors of .ATR/.XFD disk images,
+ Any part of any sectors in .ATR/.XFD disk images,

- Knows all Atari equates, including XL/XE equates

- You can set each byte of the disassembled file/disk a special type so the disassembler will handle it in special ways. The types are:
+ Code,
+ Byte directive,
+ Word directive,
+ Label in a .Word directive,
+ String,
+ Screen bytes (using .SBYTE for MAC/65)
+ Display List.

- Display sprites in a file or a disk image, various graphics modes supported.
- Fully customizable for different assemblers,
- Write boot disk from a binary file,
- Display dump of files and sector using Atari font.

The features for the registered users are:

- Support for .PRO disk images and .ATR/.XFD of any size,
- Disassembly of Spy data (a special feature to disassemble crypted code),
- Save listing in several files using .INCLUDE directive (if the assembler supports it),
- No more 10 seconds to wait in the about box.

If you have a PC and Windows, you should try it!

The unregistered version is available at http://www.nacs.net/~classics.

This is the home page of Steven J. Tucker, the author of APE. Steven is the co-author of the registered version of DIS6502.

Thank you,

Eric.

Sounds neat. Think you could make a few modifications so it would work
with Atari 2600 .BIN files too? Only a few equates, though they are
different in read and write states.

They're not terribly common, but not exactly in high demand...and there are still enough for even hard-core Atari hardware collectors to find 'em around for $5 to $10 (or maybe even less).

> And what's this box that you supposedly need to connect a modem to an Atari
> 8bit anyway? I understand you can't just throw them in the SIO chain, right?

Well, there are several boxes you can use, but I assume you're referring to the Atari 850. With this interface (or a few third-party, aftermarket products) and the appropriate cable, you can reliably hook modems up to 9600 bps to the Atari. Since there are very few things you'd want to do on the 8-bit which require 28,800 bps, this is more than adequate.

Besides, the stock Atari disk drives can only write data at speeds of 19,200 bps anyway (I think), and you wouldn't achieve faster than that in file transfers anyway because, in what seems to be a strange "turnaround" from the state of affairs today, the modem would be faster than disk I/O could handle!

Some of the Atari modems *can* be simply placed in the SIO chain without a need for an 850 or other similar interface. Of course, these modems scream at either 300 or 1200 baud, so you have to like pain.

I know that the Centipede on the 5200 is much better than on the 8-bit
computers -- the mushrooms are more rounded and the sound is better.
Also, the missle command game was better for the 5200.

Last-modified: August 27, 1996

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the
Atari 8-bit family of computers. These include the 400, 800, 1200XL, 600XL,
800XL, 65XE, 130XE, and the XE Game System.

Users of comp.sys.atari.8bit actively maintain the following four Periodic
Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current
-------------------------------------------------------------------
This posting contains a list of Frequently Asked Questions (and their answers)
about Atari 8-bit computers.
Regularly posted to comp.sys.atari.8bit comp.answers and news.answers
ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/faq
http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/faq.html
Or request from mailto:mcurrent@carleton.edu

Atari 8-Bit Computers: Vendors and Developers / Michael Current
---------------------------------------------------------------
This posting contains a comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users.
Regularly posted to comp.sys.atari.8bit comp.answers and news.answers
ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/vendev.html
Or request from mailto:mcurrent@carleton.edu

The Unofficial Atari 8-bit New User, Emulator Help FAQ / Bill Kendrick
----------------------------------------------------------------------
Bill and his FAQ are excellent sources for information on basic usage of the
8-bit Atari, and for information on the 8-bit Atari emulators which run on
other computing platforms.
Posted to comp.sys.atari.8bit irregularly.

Yeah on my cyrix P120+ jut running xl-it without command line options
from DOS hangs the systems with an annoying beep, but running it from win95
works just fine, also the speed is closer to the real thing, still a little fast
though. Who can figure that?

3479. Atari Modems

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-29 00:00:00 UTC
From: pancake@mail.utexas.edu
Message-ID: <5540ir$j01@geraldo.cc.utexas.edu>
Source record: 79142

I picked up two Atari modems today. One is the little XM301 box and another is an SX212. Are these things pretty rare? I've never seen them before in my life.

And what's this box that you supposedly need to connect a modem to an Atari 8bit anyway? I understand you can't just throw them in the SIO chain, right?

The XM301 or SX212 can be connected directly to the SIO with the proper
software. You would need an interface to use mopst other modems. Several
different interfaces were made; the Atari 850 was probably the most
common. It had a parallel printer port and four serial ports, but hardly
anyone ever used ports 3 and 4.

I finished it a long time ago. I remember some kind of rainbow bar
effect, but not much more.

I also finished Jumpman Jr. Boy was that a bear! But it did have a
great ending.

Did you get a manual for your modems? Seems I have leftover
manuals with no hardware to go with them.

Jim

You can add Atari modems to the SIO chain. Non-Atari modems require an 850 interface, a PR Connector, an MIO, a Black Box, or an R-Verter style interface.

The SX212 needs a disk-based driver for the RVerter interface; it essentially has one built in.

Well, I don't know much about the XM-301, but I own an SX-212 (S
stands for ST and X stands for XL, little trivia for you)..
The SX modem will connect straight into the SIO chain no probs, it
just has to be the last in the chain, as there isn't a spare port on
the modem. You can then use any driver to access the modem, just like
its connected to the 850 interface.

Check out my Atari Emulator Web page:
http://www.users.fast.net/~smol/8bitemu.html

It should have pointers to everything you need.

For the ROM image files check out my site:

http://www.ogopogo.com/blackat

your browser must be able to do frames... JavaScript is needed for some
parts of the site, if you don't have it on and try to enter a java enabled
section of the site it will let you know.

Unfortunalty if you do not have a frames enabled browser you will not be
able to use the site.. =(
(this will be rectified sometime in the near future).

Sure it's possible, but not worth the effort to bother. You'd have
to build an interface circuit that will separate the video signals into
RGB, Vert and horiz sync and then match the 8-bit's signal to what the
ST monitor is expecting for timing and such. Not an easy job and hardly
worth the expense, since the quality of the picture would NOT be
significanyly enhanced over Y/C monitors such as the Commodore 1720 (I
think) or Magnavox 135 monitor.

3493. Voting Polls Open! =)

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-30 00:00:00 UTC
From: "William \"BlacKat\" Fisher" <blackat@direct.ca>
Message-ID: <01bbc67e$4c83b6e0$9df7aecc@127.0.0.1>
Source record: 79156

Hi... the voting polls are open for my website!!!

Unfortunatly due to bugs in mailto: forms in Internet Explorer you will
have to
vote via manual e-mail untill i can get my ISP to put a CGI script in the
systems bin directory! =)

To vote on one of the Top 10/Worst 10 lists simply send email to
blackat@direct.ca
with either your favorite 3 games/apps or the 3 games/apps you hate the
most.
Results will be updated my hand, hopefully within 24 hrs.

To 'review' a program for the Software Database send me some e-mail with
the following information:
* Name of the program you reviewed
* Name of the company who made the program
* Any FTP links to the program in any form
* What emulators(s) used and the programs performance
* List any 'quirks' the program has with any emulator
* Any documentation you have for the program
* Any cheats or 'easter eggs' for the program
* The name or alias you want the submission credited to
* Your e-mail or homepage address for a link with above

Forms will be online soon... but hopefully you will all vote this way! =)

(please only vote once per category in the top10... review as much software
as you want... if more than one person reviews a program the results will
be averaged out fairly.)

The SX-212 is a standard modem which of course requires an RS-232
port. The "box" is needed to provide that RS-232 interfacer. The
XM-301 is a non-standard modem designed specifically for the Atari and
does plug directly into the 8-bit Atari serial bus daisy-chain. The
end of the chain actually, since it has no output as I recall.

A suggestion. If you have the cash, get yourself a Super Archiver
from CSS. It can make bootable copies that will be basically identical
to the original, but must be run from the SA enhanced drive.

3501. The Tebbit

Newsgroup: comp.sys.atari.8bit
Date: 1996-10-31 00:00:00 UTC
From: Fredrik Ekman <ekman@lysator.liu.se>
Message-ID: <dwu3rbz2i6.fsf@tintin.lysator.liu.se>
Source record: 79021
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit

In 1984, a game called The Tebbit was advertised in some British computer magazines. It was to be released by Application Software Specialities, a company which had previously released the political spoof Denis through the Drinking Glass. The Tebbit, too, was going to be a political spoof, but also a parody of the highly popular The Hobbit from Melbourne House. It was supposed to be released for C64, Atari and Spectrum.

Later reports indicate that it was never released. According to one source, this was due to poor sales of Denis through the Drinking Glass, according to another (less believable, in my opinion) it was due to the bombing of the Conservative Party Conference in Brighton (was it?).

Now, I would like to know, what happened with this game? Was it released but withdrawn, or was it not released and, if so, why not? Who was the author, anyway? Supposedly the same as for Denis through the Drinking Glass, but who was that?

Lots of questions and very few answers. Hope someone has some information.

> More importantly, is there a solution?

I am running a P-120 in Windows95... one thing I noticed was that I had to add the BLASTER environment variable to my autoexec.bat to make Xl-It! do sound.

CONFIG.SYS
```
device=c:\windows\himem.sys
device=c:\windows\emm386.exe ram highscan
fileshigh=50
buffershigh=30
dos=high,umb
```

AUTOEXEC.BAT
```
@ECHO OFF
SET SOUND=C:\PROGRA~1\CREATIVE\AWE32
SET MIDI=SYNTH:1 MAP:E MODE:0
SET BLASTER=A220 I5 D1 H5 P330 E620 T6
```

This is what my config.sys and autoexec.bat look like and I get GREAT sound in Xl-It!

It takes the CSS BitWriter/Superarchiver combo. It uses 34 sector tracks.
Impossible to copy with a standard drive; if your drive if too far out of
spec with its speed you can't boot it properly.

Bryan,
The right cart port was rarely used. That's why it was discontinued in later models
(XL and XE series). There were a few carts that actually use the right port. Monkey Wrench is one,
but I don't happen to remember any others at the memoent.

I recently acquired a box full of game cartridges without documentation.
I would be willing to reimburse the cost to photocopy/mail instructions
for the following programs; Asteroids (Atari), Basketball (Atari), Chess
(Parker), Deluxe Invaders (Roklan), Halftime Battlin' Bands (CBS), Return
of the Jedi (Parker), River Raid (Activision), Track & Field (Atari).

Message-ID: <9610311601.D0428Ej@wbris.starnet.net>
Source record: 79034

Hello. I am looking for a copy of PC Xformer 3.2 for DOS...does anyone know where I might be able to find one? I would also be interested in any 8-bit Atari emulators for DOS I might be able to FTP from the Net... I have an 800XL, and would like to program it using assembly. Is there a place on the Net, or does anyone know of a good book, which would teach me 6502 assembly? Kinda cool fact: the Apple IIe has a 6502, and SO DOES MY ATARI! :) I really would appreciate any help on these two topics. If you can help me, please e-mail me as I am not able to read usenet news. Thanx!

BTW - Do you know how to copy cartridges to disk? Thanx again!

The new web site is nearing completion... we are at over 175 visitors
now... please keep visiting!!!!

To make this web site work I need you all to participate! Please use the
forms I will post to this NG to vote on the top 10 lists and to review your
favorite software (apps, utils, and games)... for inclusion in the web
site!

If you have any questions please e-mail me!

And yes, a <NOFRAMES> version of the site will be on it's way sometime in
the future, as I am a college
student and am limited on time I can not say when... if there are enough
ppl who are limited by frames let me know and I will see what I can do.
JavaScript is here to stay however, I do not plan on making a
non-JavaScript version of the site... I hope this is not a major problem.

> I used to have a patch to let you cheat.........

You should also try to hit the Mother Spider that's going around
turning the baby spiders into invincible flashing ones, and also
the Necromancer himself. This gives you extra strength. It's
always useful to stop from time to time and hit the Necromancer
a few times. However, on level 5, that's rather difficult...

Necromancer is one of those rare games on the Atari 8-bit that
is full of style and atmosphere. That *horrible* sound that
you hear when the spiders are draining your strength on the last
stage makes you move *fast*.

Bill Williams also created Alley Cat, while not the same par

I believe that this game had the MOST HARDEST disk copy protection ever placed on a disk. I was just wondering if ANYONE has a working copy- whether original or a HACKED copy. I would like a copy of the original just to try and unprotect the disks. If anyone has the original disks, I know you won't part with them- but could you try and send me copies of all the disks. Dont worry about the protection, just skip over the bad sectors- and try to list them if you can. That way I can try and unprotect them, and then I'll send it to Yogi for the Archive. Thank you for any response......

Just a reminder to those interested in the swap meet, that it will be held next weekend, Saturday November 9th, 1-4 PM at Chemical Abstracts.

We request a $2 donation at the door, and if you successfully sell more than $30, an additional $3. If you need directions to Chemical Abstracts, send mail to msteve@magnus.acs.ohio-state.edu and I shall give you the directions you need. Any other questions can be sent to me as well.

Thank you for your time,

Michael Steve jr.
The Sequel

Here's a reprint of the message sent some time ago...

A C E C S W A P M E E T

We at ACEC have listened intently to the input of those who have attended our event in the past so as to make them happy. This is what we have done this year:

- Some unhappy people have told us, "ACEC, why do you hold this event in the middle of the worst winter weather that Ohio has to offer?"

Our response this year is to move the event from December to November, where the ending of fall tapers into a somewhat less harsh climate (we hope).

- Some other not completely satisfied people have told us, "ACEC, why do you host this event on a weekday making it almost necessary to risk getting a speeding ticket or causing an accident to make it here whilst braving the idiotically harsh elements of Ohio's December"

Our response this year is to not only include the above point but to also move the date from its well known Wednesday slot and bring it to a lesser known Saturday slot.

- Some other people afflicted by unbalanced Chi have told us, "ACEC, why do you host this event so late in the evening that I can't see the cops as they deviously hide behind the darkened snowdrifts on the splendid Ohio Winter Interstates?"

Our response this year to appease these brethren was to not only include the above two points, but also change the schedule to a more brighter timeframe (we hope) of 1 to 4PM.

- Even another group of do-gooders wanting to improve our event told us, "ACEC, why don't you guys serve food at this thing?"

Our response this year is, well, you just can't please everybody can you?

It was used for more technically advanced users -- you know, supplemental carts to work with assembly or basic. In fact, there was this utility called Monkey Wrench II (?) the was for the right slot, to work with Basic in the left slot. I never got to use the right slot myself, and that's all I remember about it. <g>

> someone please give me some advice for this problem. If you
> can help please e-mail me at...

You need to transfer the .EXE file into an .ATR or .XFD disk image.
I do have a beta version of a program designed to do that, and there are
others availible on the internet as well... my program will be online
on my web site sometime in the near future.

Another answer is to load the .EXE into PC Xformer the same way you would
a disk image. The .EXE file will then be availible as if it was on a
read-only disk image. The file can then be DOS copied (AtariDOS) to a
real disk image.

3529. Indus GT drive questions

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-01 00:00:00 UTC
From: Sapphire@innonyc.com
Message-ID: <55chpn$r6a@kensie.dorsai.org>
Source record: 79042

Hi, I just recently acquired an Indus GT disk drive, but I have a few questions, I didn't get the Dos XL manual, I'm wondering how the Syncromesh thing is supposed to work. It's supposed to speed up disk access, and when I boot Dos XL, it executes a line GTSYNC ON, but subsequent disk access doesn't seem to be any faster (it just makes a different sound when reading sectors).
I figured that maybe it would need a special disk format, so I tried formatting a double density disk with the syncromash on, but disk speeds still seem normal.
Does anybody have any idea what's going on?
Also, since the GTSYNC requires a command line parameter to activate, I can't use it with a regular DOS like Mydos or Atari Dos, are there any device drivers I can download to activate the Syncromesh with these operating systems (I don't really plan on using DOS XL, it seems rather poorly designed to me, I mean, come on, the command for copying files isn't even built-in to the command processor?)?

Anothe rthing. Inside the drive enclosure, on the main circuit board (beneath the bare drive), are two pin-type connectors on the edge of the circuit board that aren't connected to anything, one is a big double-row connector (like 40 pins total or something), and the other is a singel row of five pins, does anybody know what are these connectors used for?

Lastly, can this drive backup my protected disks with the right software, or would it need some sort of upgrade like for the 1050s (tho I've not seen any for the Indus GT)? I mean, I figure since it's got a Z80A processor and all, it must be intelligent or something......

Any help would be appreciated, thanks.

Those were great games, I think the series had a few that shipped on the Atari ST too. I remember one where you were a "space pilot" and had to save the world from nuclear war by flying to a soviet station and taking it over. That and Sinbad were my favs from that series.

>
(SNIPPED) It's messy and if you don't plan on using DOS XL,
you'll have to use SDX (SpartaDOS X) to take advantage of the Indus
high speed mode. I don't know of any other DOS that supports the INDUS
GT Syncromesh mode.

> Anothe rthing. Inside the drive enclosure, on the main circuit board

These were for a 64K add on board that would allow the user
to run CP/M type programs.
>
> Lastly, can this drive backup my protected disks with the right
> software, or would it need some sort of upgrade like for the 1050s

No. I've owned 4 of the Indus GT drives, still have 2 working
ones and as much as I've wanted such a thing, it was never done. For
this you need a 1050 with the CSS Super Archiver II AND the Bitwriter.
The last I heard the Bitwriter's were sold out and CSS didn't have enough
demand to make another production run.

I've assumed here that your INDUS is one of the later ones,
marked on the bottom "Future Systems, Inc". If not, there is a good
chance that it is not Syncromesh capable unless the PROM on the
main board has been upgraded. Can it BOOT and use a Dual Density
floppy (DOS 2.5, not DOS 3)? If so it has the latest PROM.

Hope this helps; Rich Mier

>GT Syncromesh mode.

Oh, I thought all that would be needed was a device driver, like with
teh Happy drives......

> I've assumed here that your INDUS is one of the later ones,
>marked on the bottom "Future Systems, Inc". If not, there is a good

No, mine says 'Indus Systems', but......

>chance that it is not Syncromesh capable unless the PROM on the
>main board has been upgraded. Can it BOOT and use a Dual Density
>floppy (DOS 2.5, not DOS 3)? If so it has the latest PROM.

....it can boot from a dual density floppy, so I guess it's been
upgraded.

So Synchromesh isn't like a special skewed-sector format (like the US
Doubler formats), but rather a way to actually speed up disk access on
even a regular-formatted disk?

Still doens't seem to make any difference, I'll try it again but I'll
pay more attention to the loading times (I was just running the small
utilities from the DOS XL disk, so maybe I'll try loading a large
program and see if there's any difference).

Thanks for your help.

Actually, it was intended to permit add-ons to carts. The Left Cart port
had all the same lines; that's why it never really caught on.

No copy of MULE I ever ran across used 34 sector tracks, 21 sector
tracks, yes.
Why not d/l the cracked archive copy and put your original away.

It was supposed to integrate the AMY chip for enhanced sound. AMY never
made it out; there were many problems, apparently. Anyone from inside Atari
in those days who can fill us in?

A copy of the disk that can be transferred to floppy and booted
on the Atari, or merely an ATR image which only works on an emulator?

Why bother? I saw a downloadable copy of MULE on somebody's Web page
(sorry, forgot the URL), so I downloaded it, it seems to work fine (I
haven't really played it yet, I just booted it).

3541. Atari Modems

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-01 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <55d42a$npg@usenetp1.news.prodigy.com>
Source record: 79054

The SX212 has both RS232 and SIO ports. There are drivers that allow you to connect it directly to the SIO. The "box" that is needed for modems with only RS232 ports is an Atari 850 interface, a PR Connection, or whatever it takes to convert SIO to RS232. Another route is through the expansion port on XLs and XEs as the MIO box does.

3542. Two Atari 800 questions.

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-01 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <327a6228@pianosa.demon.co.uk>
Source record: 79055

Whilst reading the usual rubbish I find here, The Hurdy Gurdy Man wrote
something interesting to All about Two Atari 800 questions.:

Hello The,

THG> Ok, I lied, here's a third question. What the hell was the right
THG> cartridge slot for? What did it actually do from you, technically

It was originally intended for use with stuff that couldn't be put in a 8k
cart. Then somebody "discovered" bank switching, so effectively making it
redundant.

There are one or two carts that need to be placed in the right slot, though.
One of them was called Monkey Wrench II, which allowed the user to access a
basic monitor, and added one or two hacks to the Atari's OS. Funnily enough,
I've just completed negotiations for the sale of MWII.

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted. Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had recieved nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill, money order, or bank note inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1- Fern Suarez
Mallorca 112
Hato Rey, P.R., USA, 00917

2- Philippe
2104 De Mexico
Chomedey, Laval
Quebec, Canada
H7M 3C6

3- Natalie Jansen
Lancveldlaan 18
5671 CN Nuenen
Holland

4- Chad Collier
2785 Cold Springs Rd. #49
Placerville, CA 95667

5- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass it
along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

Peter M. Cline <pmc7288@is.nyu.edu> writes:

>I just acquired a 1050 which I am attempting to use with my 600xl. I

Peter,
I have both the 600XL (16K) and the 1050. The disk drive works with
DOS 2.0S. But you have only 5885 bytes left. Without the drive 11502 bytes.
When I tried DOS 2.5 (which I use with the 130XE), I get the condition that
you reported. Except the message before the screen goes crazy is:
"Setting up 130XE Ram Disk". Next I made up a boot disk with just
DOS.SYS and DUP.SYS (RAMDISK.COM deleted). Now I could boot with DOS 2.5
which leaves you with more memory (7698 bytes). Which isn't a whole lot. I
made myself a memory module (4K) that plugs into the Expansion bus. That
helped a little. I think there was a plug-in memory expansion. Try Best
or Toad. Do you live in NY? (nyu.edu !) I live in Queens.
Regards, Klaus Ernst NYC,USA

Can someone help me? I'm looking for help with Sparta DOS. I tried to
Download these 4 files from the University of Michigan:
fte32g.arc ftesd32f.dcm ftedrxb.dcm ftesdtka.dcm
I downloaded these files and use the proper Utilities to either
UnARC or DiskComm them and all 4 files are corrupt. I tried downloading
them again and tried again and the DiskComm/UnARC still said it was
corrupted. I believe the files on University of Michigan are corrupt.
I need to get the ShareWare version of Sparta DOS plus other software
that goes with it. I would also like to contact Mike Hohman.
Please direct all replies through E-Mail to: bensmith@teleport.com

The Super Archiver II can handle it without the Bitwriter but
you must use the 'Sycronized Mode', I think that's what it's called. It's
much slower, but it will boot and run correctly.

>This is what my config.sys and autoexec.bat look like and I get GREAT sound
>in Xl-It!

I'm not sure if EMS is necessary for sound in Xl-It, as I
haven't tried it, but Microsoft says EMM386 is completely
superfluous in Win95. Since Win95 is capable of managing
both extended and expanded (the equivalent of the ram option
you have selected, which has always been buggy) it is not
needed unless you drop down to DOS. For that purpose, I use
a multi-boot into either Win95 GUI or DOS 7. There is a
noticeable speed increase if you delete it from your config.sys.

My config looks like this:

```
[menu]
menuitem=WIN95,Windows 95
menuitem=WINDOS,Windows DOS
menudefault=WIN95,15
[WIN95]
DEVICE=C:\WINDOWS\HIMEM.SYS /testmem:on
/testmem:off
rem DEVICE=C:\WINDOWS\EMM386.EXE ram x=a000-c7ff
dos=UMB
DEVICE=C:\DOS\EANSI.SYS
SHELL=C:\COMMAND.COM C:\ /e:1024 /p
dos=high
lastdrive=g:
DEVICEhigh=C:\TSCSI\MA13B.SYS
Devicehigh=C:\TSCSI\TSCSI.SYS
buffers=40
[WINDOS]
DEVICE=C:\WINDOWS\HIMEM.SYS
/testmem:off
Dos=UMB
DEVICEhigh=C:\DOS\EANSI.SYS
SHELL=C:\COMMAND.COM C:\ /e:1024 /p
dos=high
lastdrive=k:
DEVICEhigh=C:\TSCSI\MA13B.SYS
Devicehigh=C:\TSCSI\TSCSI.SYS
rem ---------------------- MTM ATAPI CD-ROM ----------------------
DEVICEhigh=C:\mtm\mtmcdai.sys /d:mtmide01
rem ---------------------- MTM ATAPI CD-ROM ----------------------
buffers=40
```

My autoexec is this:

```
SET MIDI=SYNTH:1 MAP:E
@echo off
cls
SET PATH=C:\WINDOWS;C:\WINDOWS\COMMAND;C:\;C:\DOS;C:\BATS;C:\TOOLS;C:\SB16;C:\TSCSI;E:\PSH
OP\PLUGINS\
cd\
SET BLASTER=A220 I5 D1 H5 P330 T6
SET SOUND=C:\SB16
SET L=C:\DOS
C:\SB16\SB16SET /Q /M:255 /VOC:220 /CD:220 /MIDI:200 /BASS:160 /TREBLE:220 /LINE:0
/mic:220
set temp=c:\temp
prompt $e[s$e[24A$e[1D$e[K$e[47;33m $p $d $t$h$h$h %config% $e[37;40m$e[u$n$g
goto %config%
:WINDOS
SET PATH=C:\WINDOWS;C:\WINDOWS\COMMAND;C:\;C:\DOS;C:\BATS;C:\TOOLS;C:\SB16;C:\TSCSI;C:\MOU
SE;E:\PSHOP\PLUGINS\
c:mouse\cloaking.exe
C:\MOUSE\MOUSE
```

```
C:\WINDOWS\COMMAND\MSCDEX.EXE /D:MTMIDE01 /M:4 /L:G
goto END
:WIN95
win
:END
```

And MSDOS.SYS should be edited to this:

```
[Options]
BootMulti=1
BootGUI=0
Network=1
```

Don't change anything in MSDOS except the options.

By the way, the prompt is one I've used since DOS 3.3.

It's an ATR image. But I think there are utilities available that let
you transfer ATR images to disk.
If you have a SIO2PC cable you can use APE to do this.

Yeah, I've got the DisCommed version as well, but we were talking about
making copies, and that's the only way I know of to copy the full disk, copy
pro and everything.

Dave

3555. New poLisH site!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-02 00:00:00 UTC
From: mfranczak@ajax.umcs.lublin.pl
Message-ID: <55f4pa$b0q@helios.man.lublin.pl>
Source record: 79063

Hi all atarians!

New Polish WWW for Atari 8bit was opened !!! /still under construction/.
There are a lot of programs: the best Polish demos, graphics editors
(for interlace), various graphics made by scene gfx-mans,
msx composers (MPT, CMC, FC, etc.) with a lot of example musics.

Novelty!!:
* ProTracker for atari8 - it's a player for music
modules in format .MOD (you know: from Amiga or PC), and you can edit
modules!!! It's use 4*4bit Pokey or 4*8bit Covox!
(You will found an electronic scheme of 4 channels 8bit Covox in this WWW)
* InterPainter - new editor for paint in Interlace mode!!

In this WWW you can found there all links to Polish WWW about 8bit machine !!!
(for example link to FTP of Taquart group - most of progs, demos and games)

New interesting items will put to this site from time to time!!

* * *

So, i'm invite you to go to this site (an official TIGHT group page):
http://ajax.umcs.lublin.pl/~mfranczak

* * *

P.S.
If you have your www about atari, please add link for this page :-)

Suggested topics, unwritten as yet: (volunteers?!)
How fast of a modem can my Atari display keep up with?
-with Ultraspeed roms?
-with XEP-80

-with any particular terminal program

What is the XEP 80?

What programming languages are available for the Atari?

What kinds of replacement ROMS?
-CSS Ultraspeed+
-Omnimon
-(there's another that I can't remember- SLCC uses it, I think)

What kinds of monitors can I use with my Atari?
-Color Composite with separate chroma\luminance
-Commodore 1702
-Commodore 1084/1084s(stereo)
-can be used with ST or Amiga _and_ 8-bit
-monitor cable requirements
-400/600XL lack monitor port entirely
-800XL lacks separate chroma/lumi (can be added) as 800/XE
-XEGS totally different plug (RCA jacks) lacks chroma\lumi
-XEP80 has composite monochrome

Video Upgrades
-Adding chroma\lumi to 800XL
-Super Video Upgrades
-800XL
-130XE
-1200XL
How can I make my commercial boot disk (tape, cart)
into a load file or disk image?

What is APE?

Subject: 1.1) What is an Atari 8-bit computer?

400 800 1200XL 600XL 800XL 65XE 130XE XE Game System

It was 1979 when Atari, Inc. entered the home computer market with the introduction of the 800 and the 400 computer systems. (The 400/800 models were first shown publicly in November 1978). These MOS Technology 6502-based systems run at a clock speed of 1.79 MHz, offering 256 colors displayable simultaneously, up to 320x192 graphics resolution and up to 40x24 text resolution in 11 graphics modes and 5 text modes. Video may be displayed either on a composite video monitor in the case of the 800, or on a standard television for both systems. 4 independent sound voices are available through the audio output of the television or monitor, each with a 3 1/2 octave range, plus there is a built-in speaker for key-click and other programmable sounds. The 800 has a second cartridge port and a full-stroke keyboard, while the 400 has a single cartridge port and a membrane keyboard. Each has 4 serial controller ports and an Atari Serial Input/Output port. Originally, both the 400 and 800 were sold with 8K RAM,

but later most 800's were sold with 48K and 400's with 16K. Each includes the 10K Atari Operating System in ROM.

The introduction of the 1200XL in 1982 marks the single largest advance in the 8-bit Atari system. The 1200XL runs most software and hardware designed for the 800 and 400, but now runs a slightly more advanced 6502C microprocessor, and includes a full 64K RAM. The single cartridge and monitor ports remain, along with 2 controller ports. In addition, the 1200XL includes 4 programmable Function keys and a Help key, built-in diagnostic and graphics demonstration programs, and probably the favorite keyboard of any 8-bit Atari computer. Clicks previously outputted through the built-in speaker are now heard from the television or monitor's speaker. The revised 14K Operating System offers many new features, including an alternate International Character Set.

In 1983 Atari replaced the 1200XL/800/400 line-up with the new 800XL and 600XL. These new machines include most of the features of the 1200XL minus the Function keys and the demo program. But now both the 800XL and 600XL have the Atari BASIC language built-in. In addition, these two systems offer the Parallel Bus Interface, providing direct memory access to the heart of the computer. The 800XL contains 64K RAM while the 600XL has 16K RAM.

The new Atari Corp. delivered on its promise to advance the 8-bit Atari system by replacing the 800XL/600XL with the new 130XE and 65XE in 1985. The 65XE is nearly identical to the 800XL in features, minus the PBI. The 130XE, however, offers 128K RAM, plus a few special new graphics capabilities. In addition, the 130XE replaces the PBI port with the Enhanced Cartridge Interface, continuing the powerful feature of direct memory access.

In a change of marketing strategy, Atari introduced the new XE Game System in 1987. Despite its label, the XEGS is a true 8-bit Atari computer system. It offers the convenience of a detachable keyboard and built-in Missile Command game, while offering 64K RAM and full compatibility with the 65XE.

Atari Corp. officially dropped all remaining support of their 8-bit computer line on January 1, 1992.

On August 1, 1996, Atari Corp. (http://www.atari.com/) became a division of upstart disk drive manufacturer JTS (AMEX:JTS). In the short term, Atari is to continue supporting their Jaguar 64-bit home game console as a division of JTS.

Founded in 1994, JTS Corporation develops and manufactures hard disk drives for the computer industry. JTS has recently introduced its new 3 Nordic product for the portable computer market. Headquartered in San Jose, California, with manufacturing facilities in Madras, India, JTS employs 1,300 people worldwide.

Subject: 1.2) What can I do with an 8-bit Atari?

What can you do with an 8-bit Atari computer system? Virtually anything you can do with any other type of computer!

Programming? Pascal, C, BASIC, Logo, Pilot, Forth, Lisp, 6502 assembler... Plus powerful unique languages like Action! and QUICK...

Word Processing? Try AtariWriter, Letter Perfect, Paperclip, TextPro, Bank Street Writer, 1st EXLent, TurboWord, Cut & Paste, Letter Wizard, Panther, Superscript...

Database? Try TurboBase, TurboFile, Synfile, Data Perfect, MicroFiler, MegaFiler, Homebase, Super Data Base 1-2-3, Small Business System...

Speadsheet? Look at Syncalc, Visicalc, TurboBase, Calc Magic, Turbo-Calc, SAM Budget...

Communications? There's Express!, BobTerm, Kermit-65, Omnicom, VT850, Chameleon, Ice-T, FlickerTerm 80, Term80...

Graphics? Print Shop, Newsroom, Blazing Paddles, Video Title Shop, Virtuoso, Movie Maker, News Station, Publishing Pro, Awardware, Page Designer, ChromaCAD, Rambrandt...

Music? Virtuoso, Music Studio, Music Construction Set, Songwriter, Electronic Drummer, Music Painter, Music Composer, AtariMusic, MIDI-Track, Digital Music System, Chaos Music Composer...

Alternate Operating Systems? There's the Diamond Graphic Operating System; SpartaDOS X, the 64K DOS on a "supercartridge"; the S.A.M. (Screen Aided Management) 80 column Desktop System; the Ultra Speed Plus OS; the TurBoss! High Speed O/S...

Hardware? A plethora of upgrades and add-ons are available, realizing improvements in speed, memory, sound, graphics, storage media...you name it!

Education? Colorful graphics, exciting sounds and full-screen editing give rise to hundreds of quality educational software titles.

Entertainment? The 8-bit Atari has long been famous for thousands of great games.

If you want to do something with a computer, chances are you can do it on an 8-bit Atari computer. While slower than today's PC's, the 8-bit Atari is far less costly than any of these, is easier to program at the machine level or alter at the hardware level, and has been documented more thoroughly than any of the newer computing platforms. The relative simplicity in design of the 8-bit Atari also means that many people find the systems more reliable than their modern counterparts.

The software for the 8-bit Atari is sometimes more powerful than on any other platform. For example, some Bulliten Board Systems are still run on 8-bit Ataris specifically because the BBS software available can be better than that for any other type of computer. There is a reason for the relative quality of software on the 8-bit Atari. People program commercially for the latest PC's to make money; people program the 8-bit Atari because they want to -- they

enjoy producing good software. It takes a team of specialized programmers to develop a major piece of software for those other systems; with the 8-bit Atari, a single person has the chance to learn the entire system, thereby developing greater pride in his programming abilities and his final product. The character of the programmer can shine through.

The 8-bit Atari owner can take pride that his computer platform was developed years before the PC or Macintosh were even on the drawing boards, but remains as useful today as it was in 1979.

For these reasons and more, the 8-bit Atari remains a viable alternative in today's home computer marketplace.

Subject: 1.3) What are the performance specifications of the 8-bit Atari?

Some of this section by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick).

Clock Speed:
NTSC machines: 1.78979 MHz
PAL machines: 1.773447 MHz

Graphics:
Mode Horiz.xVert.xColors text/graphics
0 40 x 24 x 2 text
1 20 x 24 x 5 text
2 20 x 12 x 5 text
3 40 x 24 x 4 graphics
4 80 x 48 x 2 graphics
5 80 x 48 x 4 graphics
6 160 x 96 x 2 graphics
7 160 x 96 x 4 graphics
8 320 x 192 x 2 graphics
9 80 x 192 x 16 luminence-only graphics
10 80 x 192 x 9 graphics
11 80 x 192 x 16 hue-only graphics
12 40 x 24 x 4-colored text
13 40 x 12 x 4-colored text
14 160 x 192 x 2 graphics
15 160 x 192 x 4 graphics
Normal (bordered), narrow (underscanned), and wide (overscanned) screen modes are available.
Screen modes can be mixed (by lines) down the screen using the Display List - a program which is executed by the ANTIC graphics chip every screen refresh:
60 times per second (Hz) on NTSC Ataris
49.86 Hz on PAL machines
Fine scrolling (both vertical and horizontal) can be enabled on any line on the screen.
All other screen attributes (color, player/missile horizontal position, screen width, player/missile/playfield priority, etc.) can be ajusted

at any point down the screen via a "Display List Interrupt."
Four 8-bit wide, 128 or 256 byte high single color players, and four
2-bit wide, 128 or 256 byte high single color missiles are available.
A mode to combine the 4 missiles into a 5th 8-bit wide player is also
available, as is a mode to XOR colors or blacken out colors when players
overlap (good for making three colors out of two players!) Players
and missiles have adjustable priority and collision detection.

Sound:
Four voices of 8-bit pitch-resolution, 4-bit volume-resolution,
8-distortion sound can be produced. 2 voices (1 and 2, and/or 3 and 4)
can be combined to make 16-bit pitch-resolution. Also 4-bit volume-only
modes can be enabled for digitally sampled sound replay.
A fifth "voice" is produced by the internal speaker on Atari 400/800's
(for keyclick and buzzer) and in the XL's and XE's this was
(fortunately!) rerouted through the normal audio output, and the
keyclick can be disabled.

Subject: 1.4) What is the internal layout of the 8-bit Atari?

The following text was written by Chris Crawford and appears in De Re
Atari (Atari#APX-90008), a book published and copyright by Atari, Inc.,
1981-1982. It has been very slightly modified here for generality.

"The internal layout of the Atari 8-bit computer is very different
from other systems. It of course has a microprocessor (a 6502), RAM,
ROM, and a (PIA). However, it also has three special-purpose (LSI) chips
known as ANTIC, GTIA, and POKEY. These chips were designed by Atari
engineers primarily to take much of the burden of housekeeping off of the
6502, thereby freeing the 6502 to concentrate on computations. While
they were at it, they designed a great deal of power into these chips.
Each of these chips is almost as big (in terms of silicon area) as a
6502, so the three of them together provide a tremendous amount of
power. Mastering the Atari 8-bit computers is primarily a matter of
mastering these three chips.

ANTIC ("Alpha-Numeric Television Interface Circuit") is a microprocessor
dedicated to the television display. It is a true microprocessor; it has an
instruction set, a program (called the display list), and data. The display
list and the display data are written into RAM by the 6502. ANTIC retrieves
this information from RAM using direct memory access (DMA). It processes the
higher level instructions in the display list and translates these instructions
into a real-time stream of simple instructions to GTIA.

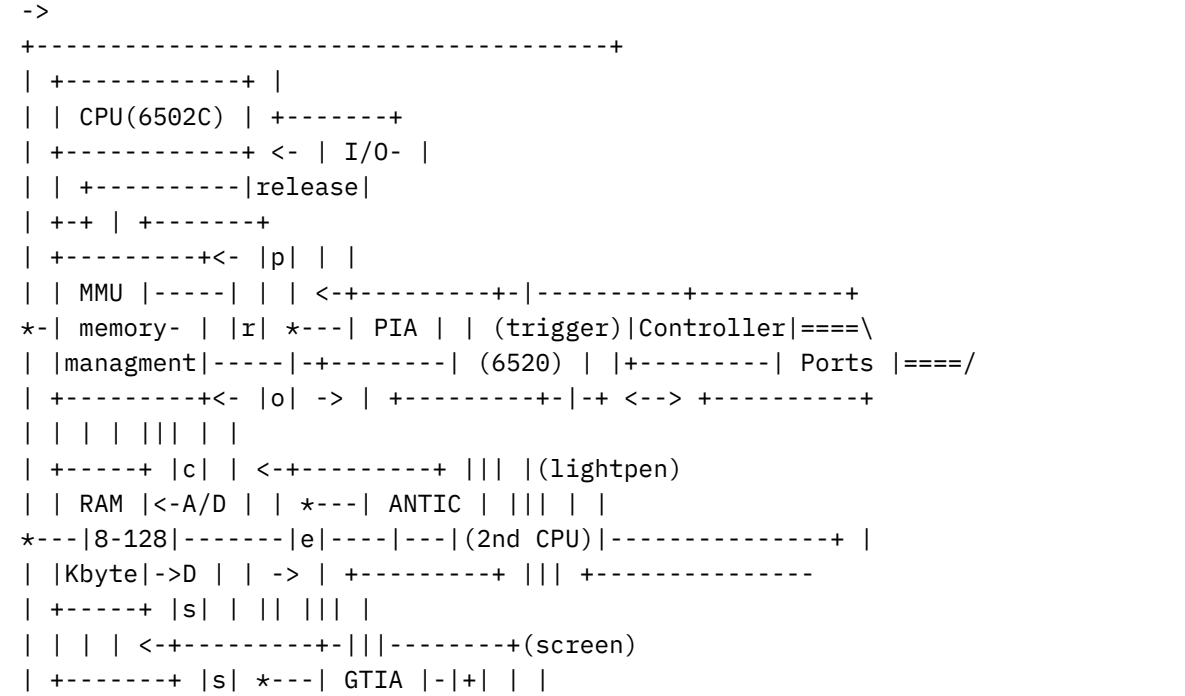
GTIA is a television interface chip. ANTIC directly controls most
of GTIA's operations, but the 6502 can be programmed to intercede and
control some or all of GTIA's functions. GTIA converts the digital
commands from ANTIC (or the 6502) into the signal that goes to the
television. GTIA also adds some factors of its own, such as color
values, player-missle graphics, and collision detection.

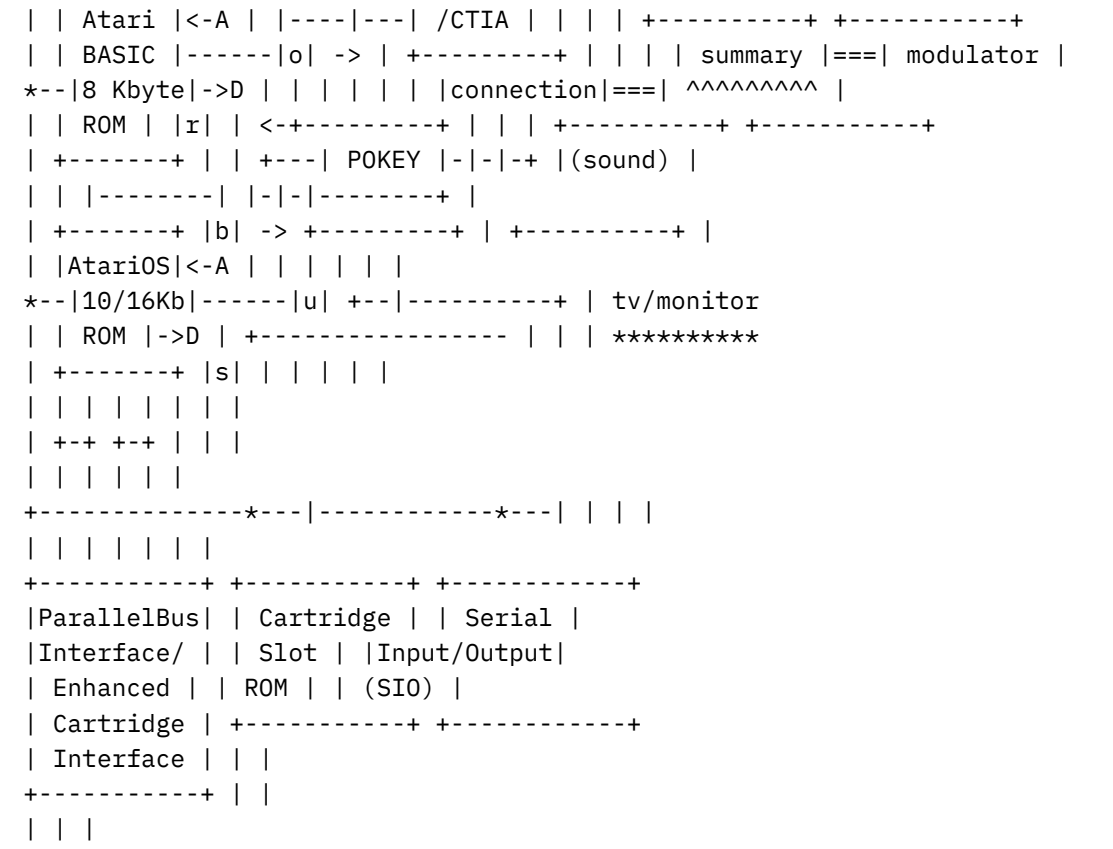
POKEY is a digital input/output (I/O) chip. It handles such disparate tasks as the serial I/O bus, audio generation, keyboard scan, and random number generation. It also digitizes the resistive paddle inputs and controls maskable interrupt (IRQ) requests from peripherals.

All four of these LSI chips function simultaneously. Careful separation of their functions in the design phase has minimized conflicts between the chips. The only hardware level conflict between any two chips in the system occurs when ANTIC needs to use the address and data buses to fetch its display information. To do this, it halts the 6502 and takes control of the buses."

The 130XE and XEGS contain a small additional LSI called FREDDIE, a RAM address multiplexer. According to mailto:sup8pdct@closer.brisnet.org.au (James Bradford), "Freddy is a type of memory controller. It takes the address and clock from the CPU and multiplexes it with the appropriate timings and signals to use DYNAMIC memory. Freddy also buffers the system clock crystal and divides it down then feeds that to GTIA. The XEGS has a freddy but it doesn't have the extended RAM. Even if it did, you would still need the chip that does the REAL bank switching. It is a small 16-pin chip (Atari/Best Electronics catalog number CO25953: rev9/page 42). It gets RAS from freddy, the bank select bits from PIA, A14, A15 and the 6502 halt signal to control which bank of 8 chips RAS goes to. A14 and A15 then go to freddy for the address range of the extra memory bank (or normal address range with no bank switching). The ANTIC/6502 select bits in combination with the 6502 halt line, control the switching of the PIA bank number bits to A14/A15 and which bank of memory RAS goes to. Why people say freddy does the bank switching is beyond me. An 800XL can look like a 130XE with that 16-pin chip installed (That's right NO freddy) and an extra 8 RAM chips."

Hardware Arrangement (With thanks to mailto:peter@soemtron.sb.sub.de (Peter))





- memory expansion -cartridge with - disk drive
- Z80 card programs - printer
- 80 char card (games , dos) - modem

NOTES
* RAM: 400/800:8/16/48K, 1200XL/800XL/65XE/XEGS:64K, 600XL:16K, 130XE:128K
* ROM: 400/800:10K OS, 1200XL:16K OS, all others:16K OS + 8K Atari BASIC
* CPU: 400/800:6502, all others:6502C
* 800 includes two Cartridge Slots, all others include one
* early release 400/800 have CTIA instead of GTIA
* 400/800 have 4 Controller Ports, all others have 2
* PBI is on 600XL/800XL only
* ECI is on 130XE/800XE only

According to Doug Neubauer (by way of mailto:finneganj@delphi.com (James Finnegan), here is the team that originally designed the Atari 400/800:
<quote>

The A800 VLSI hardware guys include:
Jay Miner - Creator and System architect, VSLI manager
Steve Mayer - Also one of the creators (from the grass valley group)
Joe Decuir - Antic and system and creator
???A french guy (whose name I forget) - Antic logic designer
George McLeod - CTIA and GTIA logic design
Doug Neubauer - Pokey logic design
Mark Shieu - Pokey chip design
Steve Stone - Pokey layout design

Steve Smith - Technician for antic and gtia
Delwin Pearson - Technician for Pokey

There were a number of other people whoses names I have forgotten.
I have lost touch with most of them.

<end quote>

According to mailto:jjessop@ix3.ix.netcom.com (Jerry Jessop), the original
400/800 OS programmers were:

Larry Kaplan
David Crane
Bob Whitehead
Al Miller

Subject: 2.1) What is comp.sys.atari.8bit?

If you have Usenet newsgroup access you can access this discussion group
through news:comp.sys.atari.8bit . This is an unmoderated newsgroup for
discussion about the 8-bit Atari 400/800/XL/XE computing platform. All
postings to comp.sys.atari.8bit automatically appear in the
Info-Atari8 Digest and in INFO-A8.

comp.sys.atari was split into comp.sys.atari.8bit and comp.sys.atari.st in
approximately 1986. To the best of my knowledge, there is no charter for
comp.sys.atari.8bit, presumably because the custom of drafting charters
for new newsgroups did not exist at that time.

comp.sys.atari.8bit is archived by the INFO-A8 list server.

Subject: 2.2) What is comp.sys.atari.announce?

news:comp.sys.atari.announce is the moderated Usenet newsgroup for news
items and announcements related to all Atari computing platforms. This is
a low-volume, high-signal newsgroup, useful for reaching the widest
possible audience when making 8-bit Atari announcements. Moderated by
Yat Siu from mailto:lexicor@world.std.com .

Subject: 2.3) What is comp.sys.atari.advocacy?

news:comp.sys.atari.advocacy is the unmoderated Usenet newsgroup for
advocating for or against the various Atari computing platforms. If you
enjoy making comparisons between Atari 8-bit and other computing
platforms, this is the place to do it.

Subject: 2.4) What is comp.sys.atari.programmer?

news:comp.sys.atari.programmer is the unmoderated Usenet newsgroup for
topics in programming on the various Atari computing platforms,
including the Atari 8-bit.

Subject: 2.5) What is comp.emulators.misc?

news:comp.emulators.misc is the unmoderated Usenet newsgroup for the
discussion of emulating computing platforms on other computing platforms.
All emulator discussion that does not involve the Apple][, the
Commodore 64, or the WINE MS-Windows emulator (which each have their own
emulator groups) may be found on comp.emulators.misc.

Subject: 2.6) What is comp.emulators.announce?

news:comp.emulators.announce is the moderated Usenet newsgroup for
news items about emulating one computing platform on another. This is
a low-volume, high-signal newsgroup, useful for reaching the widest
possible audience when making 8-bit Atari emulator announcements.
The moderator may be contacted at mailto:emulators-request@qualcomm.com .

Subject: 2.7) Where can I post Atari binaries?

If you really want to post uuencoded atari binaries to News, you can use

news:alt.binaries.atari

The discussion forum for that group is news:alt.binaries.atari.d

There is also a less-distributed newsgroup news:alt.binaries.comp.atari8bit

----

Subject: 3.1) What is the Info-Atari8 Digest?

If you have Internet e-mail access you can access this discussion group
through the Info-Atari8 Digest.

The Info-Atari8 Digest originates from

mailto:atari8@netcom.com

Subscription requests should be sent to the above address with the subject:

SUBSCRIBE | UNSUBSCRIBE (that is, one or the other)

The first line of the body of the letter should be the person's full name
followed by his/her mailing address. For example:

Mike Todd snyder10@convex1.tcs.tulane.edu

To contribute to discussion threads in the Info-Atari8 Digest, or to start a
new thread, send your posting to:

mailto:comp.sys.atari.8bit@pubnews.demon.co.uk

Postings sent in this way automatically appear on comp.sys.atari.8bit and in INFO-A8.

Note that any posting sent to atari8@netcom.com will NOT be cross-posted to comp.sys.atari.8bit, so don't send your posting there. The Moderator hopes to correct this in the future.

The Info-Atari8 Digest is archived by the INFO-A8 listserver.

Recent copies are also kept at ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason Duerstock.

The Info-Atari8 Digest Moderator is Mike Todd, mailto:snyder10@convex1.TCS.Tulane.EDU .

Subject: 3.2) What is INFO-A8?

If you have BITNET or Internet e-mail access you can access this discussion group through INFO-A8.

The BITNET subscription commands are:
tell listserv at marist register <your real full name>
tell listserv at marist subscribe info-a8

The Internet subscription command is:
mailto:listerv@vm.marist.edu where the message says
subscribe info-a8 <your real full name>

To contribute to discussion threads in INFO-A8, send your posting to

mailto:comp.sys.atari.8bit@pubnews.demon.co.uk

Postings sent in this way automatically appear on comp.sys.atari.8bit and in the Info-Atari8 Digest.

Any postings sent to info-a8@vm.marist.edu or to INFO-A8@MARIST will not reach comp.sys.atari.8bit, so don't send your postings there.

You may leave the list at any time by sending a "SIGNOFF INFO-A8" command to LISTSERV@MARIST, or by sending a message to mailto:listserv@vm.marist.edu that says "unsubscribe info-a8". Please note that this command must NOT be sent to INFO-A8@MARIST or to info-a8@vm.marist.edu.

---The archive of comp.sys.atari.8bit, the Info-Atari8 Digest, and INFO-A8---

You can obtain a list of the available archive files by sending an "INDEX INFO-A8" command to LISTSERV@MARIST or by sending a message to mailto:listserv@vm.marist.edu that says "index info-a8". These files can then be retrieved by means of a "GET INFO-A8 filetype" command, or by using the database search facilities of LISTSERV. Send an "INFO DATABASE" command for more information on the latter.

Recent copies are also kept at
ftp://ftp.kendall.mdcc.edu/pub/atari/info-a8/ (147.70.146.36) by Jason
Duerstock.

The INFO-A8 Moderators are:
HARRY@MARIST (A Harry Williams)
mailto:ravi@mcnc.org (Ravi Subrahmanyan)
mailto:billw@score.stanford.edu (Bill Westfield)

INFO-A8 was created on December 9, 1986.

Subject: 3.3) How can I retrieve files from FTP sites by e-mail?

There are several general-purpose FTP mail-servers. These may be used to
retrieve any files available from anonymous FTP sites on the Internet.

1) mailto:ftpmail@decwrl.dec.com with no subject line, and two-line
body with line 1 help and line 2 quit

2) mailto:ftpmail@grasp.insa-lyon.fr (body: help) Please, European
users only.

3) mailto:bitftp@pucc.princeton.edu (body: help or ftplist for a
list of anonymous ftp sites)

Of the mail-servers listed here, I recommend this "BITFTP" server. To help you
get started using it, try this example of retrieving files from the Umich
Software Archives (through the barnone.citi.umich.edu mirror site). Send a
message to bitftp@pucc.princeton.edu that says exactly:

```
ftp barnone.citi.umich.edu
user anonymous
cd atari/8bit
dir
cd Telecomm
dir
get ft80v037.txt
get icet.txt
binary
get ft80v037.arc
get icet.arc
quit
```

4) mail BITFTP@DEARN or to mailto:BITFTP@vm.gmd.de (body: help or
ftplist for a list of anonymous ftp sites) (Europe only)

Subject: 3.4) How can I post to Usenet newsgroups by e-mail?

From the internet-services/access-via-email FAQ, maintained by "Doctor Bob"
Rankin. (1995/08/28 edition)

Mail the text of your post to:

group.name@pubnews.demon.co.uk
group.name@dispatch.demon.co.uk
group.name@paris.ics.uci.edu
group.name@crs4gw.crs4.it
group.name@berlioz.crs4.it
group.name@magus.dgsys.com (unverified)
group.name.usenet@hkucs92.air.org (unverified)

For example, to post to comp.sys.atari.8bit, you might send your
message to:

comp.sys.atari.8bit@pubnews.demon.co.uk

Be sure to include an appropriate Subject: line, and include your real
name and e-mail address at the close of your note.

Subject: 3.5) How can I access the World Wide Web by e-mail?

Swiped from the WWW FAQ, which is maintained by mailto:boutell@netcom.com
(Thomas Boutell), here is how to access a web page by email:

mailto:server@mail.w3.org (preferred) or to
mailto:listserv@info.cern.ch (older address) containing
the following single line. (What you put on the subject line doesn't
matter; blank is OK. This line should go in the text of the message.)
You will receive as a reply a simple page intended to help you learn
more about the Web.

send http://www.earn.net/gnrt/www.html

Subject: 4.1) What is the University of Michigan Archive?

The University of Michigan (UMich) Software Archives hold a huge number of
files for many computing platforms, including the Atari 8-bit computers. For
more information:

Bill Kendrick, mailto:kendrick@zippy.sonoma.edu (8-bit Atari files)
Mickey Boyd, mailto:boydm@atari.archive.umich.edu (the entire Atari Archive)
Michael Dautermann, mailto:myke@umich.edu (the entire UMich Software Archives)

Downloading

There are numerous methods available for downloading files from the UMich
Archive. The Archivists request you use these mechanisms in this order of
preference:

1) The number one way to get into the UMich archives is via AFS. If you have
AFS, all our files are kept in the directory
"/afs/umich.edu/group/itd/archive". If you have AFS, PLEASE USE IT!
Specifically, use:

file:///afs/umich.edu/group/itd/archive/atari/8bit/

2) Gophering to gopher.archive.umich.edu and looking under the "Software
Archives" choice. Specifically, use:

gopher://gopher.archive.umich.edu:7055/11/atari/8bit/

There are also mirror Gopher servers:
gopher://wuarchive.wustl.edu:70/11/systems/atari/umich.edu/8bit/
gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/8bit/
gopher://gopher.orst.edu:70/11/g-i-s/computer/zftparea/mirrors/archive.umich.edu/atari/8bi
t

3) The WWW interface is fine, at this point. http://www.umich.edu/~archive/
Specifically, use:

http://www.umich.edu/~archive/atari/8bit/

A mirror web site:
http://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/

4) FTPing to atari.archive.umich.edu and looking in the "8bit" subdirectory.
Specifically, use:

ftp://atari.archive.umich.edu/atari/8bit/

The atari.archive.umich.edu FTP site is chronically overloaded, but there are
several mirror sites which are all updated from the home site regularly:
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/8bit/
ftp://sunsite.doc.ic.ac.uk/computing/systems/atari/umich/8bit/
ftp://info2.rus.uni-stuttgart.de/afs/umich.edu/group/itd/archive/atari/8bit/
ftp://ftp.orst.edu/pub/mirrors/archive.umich.edu/atari/8bit/
ftp://barnone.citi.umich.edu/atari/8bit/ (<-- RECOMMENDED)
ftp://ftp.kendall.mdcc.edu/pub/atari/umich.edu/8bit/
ftp://ftp.toad.net/pub/umich/8bit/

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

5) E-Mail <-> FTP gateways. See the section of this FAQ list entitled "How can
I retrieve files from FTP sites by e-mail?"

Uploading

General uploading tips:
- No uploads may be made to the Archive's mirror sites.
- Please also upload a short text file describing what your upload is. You
might also suggest what permanent 8bit subdirectory you'd like your file to
end up in.
- Note that the 8bit/New directory is "write-only."

1) upload via AFS:
Just copy files into file:///afs/umich.edu/group/itd/archive/atari/8bit/New/

2) upload via FTP:
FTP to atari.archive.umich.edu, cd into "8bit/New", and upload your files.

Brief FTP tips:
- user name is "anonymous"; password is your e-mail address
- Remember to set file type to BINARY when downloading non-text files
(.arc, .com, .dcm, etc.) by FTP.

3) upload via E-Mail:
Simply uuencode the file, (please split it into parts of 60 K or less)
and mail the result to mailto:lenn@atari.archive.umich.edu (Jody Lenn). Please
name the parts in the subject line. This is really helpful as the parts
usually don't arrive in the proper sequence. Also, please include a
message labeled "file transmission," containing a short description of
the file, etc. Shar files are also acceptable, but uuencoded is preferred.

Subject: 4.2) What is the Boston Archive?

Here's an 8-bit Atari FTP site located at Boston University. It is
maintained by Adam Bryant, mailto:adb@albert.bu.edu . This site seems to
have seen no uploads for years, but there are some files here that aren't
on any of the other sites. [IS THIS SITE LOST? - 10/13/95]

ftp://cs-ftp.bu.edu/PC/ATARI (128.197.13.20)

Subject: 4.3) What is the PVV Archive?

This is a mid-sized Atari FTP site maintained by mailto:eyvind@stud.unit.no
(Eyvind Bernhardsen). PVV stands for ProgramVareVerstedet, or The Software
Workshop, a student society at the University of Trondheim, Norway.

ftp://ftp.pvv.unit.no/pub/atari/8bit/ (129.241.210.232)

Uploads go to /incoming/atari/8bit; Eyvind will move them to the appropriate
directory. Please include a readme file with each upload, so people know
what they're downloading.

Subject: 4.4) What is the ClarkNet Archive?

This smallish 8-bit Atari FTP site is maintained by Kevin Atkinson,
mailto:kevina@clark.net .

ftp://ftp.clark.net/pub/atari (168.143.0.2)

Write to Kevin for uploading instructions.

A mirror of the ClarkNet Archive, kept by Jason Duerstock:
ftp://ftp.kendall.mdcc.edu/pub/atari/clark.net/ (147.70.146.36)

Subject: 4.5) What is the Gatekeeper's Archive?

This small FTP site offers most of the resources provided on the Atari 8-Bit Home Page. Kept by mailto:ipoorten@cs.vu.nl (Ivo van Poorten, The Gatekeeper).

ftp://ftp.cs.vu.nl/pub/ipoorten/atari.8bit (192.31.231.43)

Subject: 4.6) What is the QACE Archive?

The Queensland Atari Computer Enthusiasts have a fairly large FTP site. It is located in Australia and is the local internet sight of Super Products. Contact James Bradford, mailto:sup8pdct@closer.brisnet.org.au for more info.

ftp://203.4.149.98/8bit

Subject: 4.7) What is the Polish Demo Archive?

It's a place when you can get all Polish (not only) demos (not only) on a Atari 8-bit.
If You have any comments, write to:
mailto:LukSoft@hipokrates.am.lublin.pl

ftp://hipokrates.am.lublin.pl/sys/pub/atari8/

Subject: 4.8) What is the Slovakian Archive?

This FTP site contains some demos, games, utils, zines from all the world. Here you can also find some Slovak or Czech stuff.

Contact: mailto:mchorvat@econ.umb.sk (Marco, of GMG)

ftp://svs.scsss.sk/pub/atari/

Subject: 5.1) What is the Cleveland Free-Net Atari SIG?

The Cleveland Free-Net is the hub system of the NPTN, the National Public Telecomputing Network. It can be accessed by any of the following: telnet://freenet-in-a.cwru.edu, telnet://freenet-in-b.cwru.edu, or telnet://freenet-in-c.cwru.edu (129.22.8.32 or 129.22.8.51).
Type "go atari" to reach the Atari SIG.

Those who add their names to the Atari SIG user directories are automatically members of the official Atari user group C.A.I.N. - Central Atari Information Network.

The Cleveland Free-Net Atari SIG publishes the CAIN Newsletter, maintains the CAIN Home Page on the WWW, and keeps the "Who's Who in the Atari

Community E-Mail Directory" listing. Send correspondence and press
releases to mailto:xx004@cleveland.freenet.edu (Atari SIG).

Subject: 5.2) What is the National Capital Free-Net Atari Users SIG?

National Capital Free-Net (Ottawa, Canada)

Internet access to NCF is via

telnet://guest@freenet2.carleton.ca (134.117.1.39) type "go atari" at any menu
telnet://guest@freenet3.carleton.ca (134.117.1.22) type "go atari" at any menu
gopher://gopher.ncf.carleton.ca and choose:
'National Capital Freenet (NCF) Information by Gopher'
http://www.ncf.carleton.ca/freeport/sigs/computer/atari/menu/

This is the Atari computer(*) users special interest group.

Select the Bulletin Board for the latest Atari related news on the SIG
To get information on the other options select the menu option in question
and read the ABOUT message.

For more information, please contact Jack Kitowicz (ac382) on the
National Capital FreeNet. Comments & Suggestions for improvements to the
Atari SIG are always welcome.

Subject: 5.3) What is the Victoria Free-Net Atari Computer Users SIG?

Victoria Free-Net (Victoria, Canada)

telnet://guest@freenet.victoria.bc.ca (199.60.222.1)

type "go atari" at any menu

Facilitators: Gord Hooper (mailto:ua558@freenet.victoria.bc.ca)
Ted Skrecky (GCACE Librarian)
(mailto:ud264@freenet.victoria.bc.ca)

The aim of this SIG is to assist Atari Computer users. We can provide
assistance with XL/XEs, STs, and Falcons, whether you are a new or
experienced user.

Subject: 5.4) What is the Closer To Home BBS?

Kept by mailto:Dave.Blears@closer.brisnet.org.au (Dave Blears), this is a
BBS in Australia which supports the 8-bit Atari.

telnet://guest@closer.brisnet.org.au (203.4.149.97)

Subject: 5.5) How can I access the World Wide Web by Telnet?

This section swiped from the WWW FAQ, which is kept by
mailto:boutell@netcom.com (Thomas Boutell).

An up-to-date list of these is available on the Web as
http://info.cern.ch/hypertext/WWW/FAQ/Bootstrap.html and should be
regarded as an authoritative list.

telnet://telnet.w3.org
A telnettable browser provided by the W3 coalition.

telnet://www@www.cc.ukans.edu
Offers Lynx, a full screen browser which requires a vt100
terminal. Log in as www. Does not allow users to "go" to
arbitrary URLs, so GET YOUR OWN COPY of Lynx and install it on
your system if your administrator has not done so already. The
best plain-text browser, so move mountains if necessary to get
your own copy of Lynx!

telnet://www@www.njit.edu
(or telnet 128.235.163.2) Log in as www. A full-screen browser
in New Jersey Institute of Technology. USA.

telnet://www@www.huji.ac.il
A dual-language Hebrew/English database, with links to the rest
of the world. The line mode browser, plus extra features. Log
in as www. Hebrew University of Jerusalem, Israel.

telnet://sun.uakom.cs
Slovakia. Has a slow link, only use from nearby.

telnet://www@info.funet.fi
(or telnet 128.214.6.102). Log in as www. Offers several
browsers, including Lynx (goto option is disabled there also).

telnet://www@fserv.kfki.hu
Hungary. Has slow link, use from nearby. Login is as www.

Subject: 7.1) What WWW pages support the 8-bit Atari?

This should be a complete list of WWW pages supporting the 8-bit Atari.

VENDORS/DEVELOPERS/PUBLISHERS:
See my companion vendor/developer list

Subject: 8.1) What IRC channels discuss the 8-bit Atari?

==> #atari8 - Just for 8-bit Atari users!

==> #classic - Classic Games and Systems Collectors.

mailto:cmwagner@gate.net (Chad Wagner) writes:

If you have access to a Unix host then you should be able to get to irc by
typing irc at your shell prompt and jumping on an EFnet server
(irc.portal.com, irc.eskimo.com, dewey.cc.utexas.edu) and joining #atari8.

If you are using a host that has a menu system then locate IRC and go there,
and join #atari8 (and hope your on EFnet, :).

If you are using SLIP/PPP then download a client (for Windows users, download
mIRC for Winsock archives, and I would guess that most SLIP/PPP users -- if
they have gotten that far -- are familiar with IRC, :) and select one of
the servers and join #atari8. There is many IRC servers on EFnet, chances
are the one your on is on EFnet.

Subject: 9.1) What's this UUEncoding stuff (.uu, .uue files) all about?

UUEncode/UUdecode is a UNIX utility that will convert a binary file into
100% printable ASCII characters, so that the file may be posted or e-mailed
anywhere a text message can go. The 8-bit Atari is perfectly capable of
UUEncoding/UUdecoding as well. On the archives:

Uudecode 1.2a by John Sangster - very functional.
filenames: Archivers/uudecode.bas, Archivers/uudecode.doc

Yet Another UU-coder by John Dunning - both decoding/encoding.
filename: Archivers/yau.arc

Uudecode.com, Uuencode.com by ??? - "newer, cleaner, easier to use."
filename: Utilities/uue.arc

Dumas UU-coder by John Dunning
filename: Cc65/dumasuu.arc

Subject: 9.2) What is an .arc file?

A file with the extender .arc has been archived in a standard manner that
is common in the MS-DOS world. This is done to make the file shorter,
so it takes up less space on your disk and it takes less time to transfer
between computers. The archives contains several 8-bit Atari archivers
fully compatible with this standard, including:

Super Un-Arc 2.3, Super Arc 2.0 by Bob Puff - highly recommended.
filenames: Archivers/superarc.arc - both Super Un-Arc & Super Arc
Archivers/suprarc2.arc - Super Arc
Archivers/supunarc.com - Super Un-Arc
Archivers/supunarc.uue - Super Un-Arc

Subject: 9.3) What are the .DCM, .ATR, and .XFD file formats?

These are all filename extensions used to name files containing entire 8-bit
Atari floppy disk images.

DCM - Disk Communicator format. Invented by Bob Puff,
mailto:76702.1076@compuserve.com for his Disk Communicator 3.2 utility.
Used when working with native Atari hardware.

ATR - Atari disk image format. Invented by Nick Kennedy,
mailto:nkennedy@cswnet.com for his SIO2PC project.
Used when working with non-Atari hardware.

XFD - Xformer disk image format. Invented by Emulators Inc,
mailto:emulators@msn.com for their ST Xformer emulator.
Identical to ATR except without the 16 byte header.
Used when working with non-Atari hardware.

PRO - APE ProSystem format. Invented by Steven Tucker,
mailto:classics@nacs.net for his APE ProSystem device.
Used with APE, the Atari Peripheral Emulator.

Subject: 9.4) What are the .XMO and .BIN file formats?

XMO stands for XMODEM. The idea was that the file was not plain text,
but was a binary file. As a binary file, it had to be downloaded using a
file transfer protocol such as XMODEM. The use of ".xmo" as a filename
extender was popular once, but has been discouraged for years.

BIN - another filename extension sometimes used to designate binary-load
files. Like .xmo, use of .bin is discouraged.

Subject: 10.1) What 8-bit Atari emulators exist for other computing platforms?

These are the five emulators that are usable.

1) ST Xformer 3.0, from Emulators Inc, for the Atari ST.
mailto:emulators@msn.com
http://www.emulators.com/

2) PC Xformer 3.5, from Emulators Inc, for MS-Windows.
mailto:emulators@msn.com
http://www.emulators.com/

3) Rainbow 1.3, by Chris Lam, for MacOS/Windows 95/NT
mailto:jx91@cityscape.co.uk
http://www.cityscape.co.uk/users/jx91/rainbow.html

4) Atari800 Emulator for Unix and Amiga, by David Firth
Latest version: 0.4.5
mailto:david@signus.demon.co.uk
ftp://ftp.demon.co.uk/pub/emulators/atari/ (158.152.1.44)

5) XL-it! 0.16, by Markus Gietzen, for MS-DOS
mailto:iig05-1@htw.uni-sb.de
http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html

Subject: 11.1) What are the best terminal emulators available?

Here are some of the more popular PD/freeware/shareware terminal programs available.

BobTerm 1.22, shareware by Bob Puff
Emulates: VT52
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: XMODEM, YMODEM, FMODEM
Autodial: Yes
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Feature-filled; excellent for BBSing
filename: Telecomm/bterm12.arc

Kermit-65 3.7, PD by John R. Dunning
Emulates: VT100
Text: 40 columns in gr.0; 80 col. in gr.8; 80 col. w/ XEP80 (sort of)
File Xfer: Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Excellent VT100 emulation; rock-solid Kermit Xfers
filenames: Telecomm/k65v37.arc - latest version
Telecomm/k65doc.arc - documentation
Telecomm/k65src.arc - source code

OmniCom by CDY Consulting
Emulates: VT100
Text: 80 columns in gr.8
File Xfer: XMODEM, Kermit
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Combination VT100, XMODEM, Kermit; buggy at file Xfers
filename: Telecomm/omnicom.arc

VT850 B1, shareware by Curtis Laser
Emulates: VT100/VT102 (plus complete VT220 keymap)
Text: 40 columns in gr.0; 80 col. w/ XEP80
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: Yes
Summary: Excellent at VT100 on the XEP80; 1200bps top speed
filename: Telecomm/vt850b1.arc

FlickerTerm 80 v.0.51, freeware by LonerSoft (Clay Halliwell)
Emulates: VT100, IBM ANSI
Text: 80 column via a special Graphics 0 screen (no hardware req'd)
File Xfer: None
Autodial: No
Backscroll buffer: No
Capture-to-disk: No
Summary: Fastest and most complete VT100 emulation; readability a minus
filename: ?????

Ice-T 2.71 XE (128K) or 1.1 (48K) by IceSoft (Itay Chamiel)
Emulates: VT100
Text: 80 column via a fast-scrolling graphics 8 screen
File Xfer: XMODEM download
Autodial: Yes (2.7 XE) or No (1.1)
Backscroll buffer: Yes--8 screens (2.7 XE) or One screen (1.1)
Capture-to-disk: Yes--up to 16K (2.7 XE) or No (1.1)
Summary: Excellent for high-speed VT100 emulation
available from mailto:brucka@eruvin.jct.ac.il

Subject: 11.2) Can I read/write 8-bit Atari disks on an IBM-PC?

There are several programs that allow an MS-DOS system to work with an
Atari-format diskette. The following require a DOS and disk drive on the
Atari end capable of the SS/DD 180K format:

ATARIO by Dave Brandman w/ Kevin White - Reads SS/DD 180K Atari disks.
filename: Diskutils/atario21.arc

SpartaRead by Oscar Fowler - Reads SS/DD 180K SpartaDOS disks.
filename: Diskutils/sr.arc

UTIL by Charles Marslett - Reads/Writes SS/DD 180K Atari disks. Use MyUTIL!
filename: Diskutils/dskutil.arc
(Older versions are contained in pcxfer.arc, util.arc, and ataridsk.arc)

MyUTIL by Charles Marslett with Mark Vallevand, and
SpartaDOS disk utility by Mark Vallevand
filename: Diskutils/myutil.zip
includes best version of UTIL for read/write of SS/DD 180K Atari disks,
plus Mark's SpartaDOS disk utility v0.1e to access 180K SpartaDOS disks

MyUTIL and the XF551 - tips from mailto:JTKIRK@urp.edu.pe:

]MyUtil works fine with the XF551. The XF551's speed is 300 rpm (sometimes even
]up to 303 rpm). I've got two XF551s and can read/write disks written on a PC
]with MyUtil on both with no problems. MyUtil even can write to a DS/DD disk,
]for a total of 360 K, BUT: the ATARI disks not only have the bits inverted,
]the second side is also read BACKWARDS respect to PC disks. That is, when
]MyUtil on the PC writes to what it thinks is sector 721, it really is writing
]to sector 1440! Worse, if you take an ATARI disk with a file whose sectors
]get past sector 720, MyUtil will attempt to read the sector 2161-n instead of
]'n', and you'll get a 'truncated record' error. The solution is simply to
]rewrite the code to take into account this (if sec>720 then sec=2161-sec).
]Let me know if you modify this. You don't know how frustrating it is to have
]to use only 180 K of a 360 K disk! I'm going to analyze the source code, but
]I don't know if I will be able to modify it properly. If someone does it
]before, please email me and send me an uuencoded copy or tell me where to get
]it.

Here's some advice on using the above utilities from mailto:hans@umd5.umd.edu
(Hans Breitenlohner):

There are two technical obstacles to interchanging disks between
DD Atari drives and PC drives.

1. The Atari drive spins slightly slower (288 rpm instead of 300 rpm).
If you format a disk on the Atari, then write sectors on the PC, it is
possible that the header of the next physical sector will be overwritten,
making that sector unreadable. (The next physical sector is usually
the current logical sector+2). The solution to this is to format all
disks on the PC.
(Aside: Does anybody know how this problem is handled on the
XF551? Is it also slowed down?)
Konrad Kokoszkiewicz, mailto:conradus@plearn.edu.pl answers:
"The XF551 disk drive is not slowed down - these drives are spinning
300 rotations per minute. To prevent troubles with read/write disks
formatted and written on normal Atari drives (288 rot/min), the main
crystal frequency for the floppy disk controller is 8.333 MHz
(not 8 MHz, as in 1050, for example)."

2. If the PC drive is a 1.2M drive there is the additional problem of the
track width. The following is generally true in the PC world:
- disks written on 360k drives can be read on either drive
- blank disk formatted and written on 1.2M drives can be read on

either kind
- disks written on a 360k drive, and overwritten on a 1.2M drive,
can be read reliably only on a 1.2M drive.
- disks previously formatted on a 360k drive, or formatted as 1.2MB,
and then reformatted on a 1.2M drive to 360k, can be read reliably
only on a 1.2M drive.
(all this assumes you are using DD media, not HD).

Solution: Use a 360k drive if you can. If not, format disks on the
Atari for Atari to PC transfers, format truly blank disks on the PC
for PC to Atari transfers.

While the above work with SS/DD 180K Atari-format disks, the following
combination of utilities can be used to work with SS/SD 90K Atari-format
disks, and is currently the best bet for reading SS/ED 128K Atari-format
disks.

AnaDisk 2.07, shareware by Sydex - Reads/Writes "any" 5.25" diskette
filenames: Xf2/anad207.zip, Xf2/anadisk.txt
Deana by Nate Monson - converts AnaDisk dump files from Atari format
filenames: Xf2/deana.com, Xf2/deana.txt

Explanation --> According to mailto:crow@cs.dartmouth.edu (Preston Crow),
"As best as I can figure it out, if your PC drive happens to read
FM disks (I'm not sure what the criteria for that is), then you
can read single density disks on your PC by dumping the contents
to a file with AnaDisk, and then using Deana.com to convert the
dump file into a usable format.
For enhanced density disks, Anadisk generally only reads the first
portion of each sector, but it demonstrates that it is possible for
a PC drive to read enhanced density disks."

Subject: 11.3) Can I read/write MS-DOS disks on an 8-bit Atari?

a) Mule by Rick Cortese - Read/Write 180K MS-DOS disks with an Atari 1050
drive or equivalent. Very limited.
filenames: Diskutils/mule.arc, Diskutils/mule.exe, Diskutils/mule.txt

b) SIO2PC, described elsewhere in this FAQ List (section 12.4), can be
used to read/write to a hard drive connected to an MS-DOS system. This
can also be a very effective file-transfer solution.

c) The XF551 3.5" Upgrades from Computer Software Services (see the
companion vendor/developer list) allow the Atari XF551 disk drive to read
720K 3.5" MS-DOS disks.

d) The Floppy Board, the add-on to the Black-Box from Computer Software
Services (see the companion vendor/developer list), allows both low
density (360K 5.25", 720K 3.5"), and, in the case of the Deluxe
Version, high density (1.2M 5.25", 1.44M 3.5") external MS-DOS-standard
floppy drives to be used on the Atari. A utility is included to

read/write MS-DOS formatted floppies in all supported densities.

Subject: 11.4) How do I transfer files using a null modem cable?

This section by mailto:cb541@cleveland.Freenet.Edu (James R. Gilbert)

A: Simply put, you need a terminal program and an RS 232 port on each computer. The RS 232 ports need to be connected together using a 'null modem cable'.

For up to 4800 bps, no flow control lines need be connected. Just cross the transmit and receive lines and join the grounds together. (Transmit is pin #2, receive is pin #3 and ground is pin #7 on the 25-pin port.)

The right hand pin on the 'long' side of a female 'D' connector is #1. There are 13 holes on this 'long' side, 12 holes on the 'short' side. The numbers go from #1 on the right to #13 on the left on the 'long' side and from #14 to #25 from right to left on the 'short' side. #25 is closest to being under #13. A male connector is the mirror image of this.

Most terminal programs allow a null connection, without a carrier detect. Notably, '850 Express!' does not.

A convenient way to make a null modem cable, up to about 30 feet long, is to use two female DB25 connectors and some three or more conductor cable. Using the two DB25 female connectors allows unplugging your modem and plugging in the null modem cable. This also avoids the confusion of the wide variety of serial port jacks on different computers. Almost all computers connect into the modem via a DB25 connection.

The SIO port on the Atari cannot be used directly. An 850 Interface Module, P:R:Connection, Multi I/O, Black Box (by Computer Software Services) or similar device that provides an RS232 port must be used.

On the Atari, the port is a female DB9. So you need a male DB9 to male DB25 modem cable to connect to your modem. So why not use this cable as your null modem cable as well?

For higher speed connections, above about 9600 bps on the 8-bit, you need the flow control lines. You also need a Multi I/O or Black Box, which use the PBI (parallel bus), then you can go higher than 9600 bps.

Following are pin assignments for a DB25 pin RS 232 C
port.
13 1
o o o o o o o o o o o o o
o o o o o o o o o o o o
25 14

(Above is female, male is mirror image.)

1. Protective Ground 12. Select Alternate Rate
2. Transmit Data 15. Transmit Clock (sync)
3. Receive Data 17. Receive clock (sync)
4. RTS (Request to Send) 20. Data Terminal Ready
5. CTS (Clear to Send) 22. Ring indicator
6. Data Set Ready 23. Select Alternate Rate
7. Signal Ground 24. Transmit Clock
8. Carrier Detect

A high speed cable would need not only pins 2 and 3 crossed
but also pins 4 and 5 as well as 6 and 8. Or better
yet, make a true 25 wire, straight through cable and use
a commercial null modem. A commercial null modem is
just a small device with the correct lines already
crossed.

(DTE = Data Terminal Equipment, i.e., your computer.
DCE = Data Communications Equipment, i.e., your modem.)

Subject: 12.1) What 5.25" floppy disk drives are available?

==> Trak AT-1
SS SD/DD Slave

==> Indus GT
SS SD/ED/DD Synchromesh mode usable with SpartaDOS X and
DOSXL only.

==> Astra Double-D?
SS/DS SD/DD? standard /LEDs and such

==> Rana 1000
SS SD/ED/DD standard /LEDs and such can format disks on a
stand alone basis

==> TOMS 720
double head disk drive, 5.25", with mounted interface Centronics,

chips: CPU 8085, WD2797, PIA 8255 (for handle Centronics), 32 KB ROM, 8 KB RAM
ROM contains: OS of drive, MYDOS 4.50 and some utilities (copy, format, etc.)
ROM is seen by computer as drive D1: (if drive is open), and D3: (when drive
has number D1:) or D4: (when drive has number D2:). It makes possible load DOS
from ROMdisk during booting system.
Formats of disks:
- SS/SD - 40 tracks, 18 sects, 128 bytes = 90 KB
- SS/ED - 40 tracks, 26 sects, 128 bytes = 130 KB
- SS/ED - 40 tracks, 18 sects, 256 bytes = 180 KB
- SS/ID - IBM S-9 - 40 tracks, 9 sects, 512 bytes = 180 KB
- DS/DD - 40 tracks, 18 sects, 256 bytes = 360 KB
- DS/QD - 80 tracks, 18 sects, 256 bytes = 720 KB
- DS/ID - IBM D-9 - 40 tracks, 9 sects, 512 bytes = 360 KB
Transmition modes:
- normal - 19200 bps
- Turbo - 70000 bps
- Ultra Speed - 70000 bps
Also tracks buffering.

==> AS SN-360
double head disk drive, 5.25", CPU 8051, controler WD2797
19200 bps
Available formats:
- SS/SD - (FM) single sided, single density - 90 KB
- SS/ED - (MFM) single sided, enhanced density - 130 KB
- SS/DD - (MFM) single sided, double density - 180 KB
- DS/DD - (MFM) double sided, double density - 360 KB

==> TOMS 710
(The newest polish disk drive and probably the best one)
Similar to TOMS 720, one more format:
- double sided, 80 tracks, IBM (720 KB)
Transmition modes:
- standard 19200 bps
- TOMS Turbo (loaded from ROMdisk if drive is open) - 67000 bps
- Ultra Speed (QMEG-OS, SpartaDOS) - 67000 bps
Also tracks buffering.
ROMdisk contain:
- MYDOS 4.50
- COPY
- INIT
- TURBO - turn on/off TOMS Turbo mode
- BASIC - turn on/off Atari Basic
- AUTORUN.SYS - ramdisk
- README
Also TOMS Navigator instead of DUP.SYS. It is program similar to Norton
Commander on PCs.
IBM-ST copier on additional disk.

==> LDW Super 2000
SS SD/ED/DD 19200 bps or 38000 bps

CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2001
SS SD/ED/DD 19200 bps or 38000 bps
CPU Z80A, ROM 4 KB, RAM 256 B. Some difficulties with ED

==> LDW CA-2002
SS/DS SD/ED/DD 19200 bps, 70000 with SpartaDOS
CPU 8040, ROM 4 KB, RAM 256 B

==> Floppy board various
Any standard very fast parallel
DOS-transparent. Requires Black Box. DS system configurable for
XF Percom or ATR style

==> HDI various
Any standard very fast SIO? European

==> SWP ATR-8000
Any standard standard except 1.2 meg and unique DS system
(HD) nice Z80 CP/M system in which CP/M drive acccess is parallel only
thus faster.

==> Atari 1450XLD drives
DS SD/ED DD? standard, requires DOS4. unusual DS system
Only prototypes exist.

==> KARIN MAXI
Double head disk drive 360 KB/5,25" or 720 KB/3,5", controller WD 1772.
Available formats:
= standard SS/SD 90 KB
= standard SS/ED 130 KB
= standard SS/DD 180 KB
= 'cylindric' DS/DD 360 KB (XF-551 uncompatible)
= 'cylindric' DS/QD 720 KB (TOMS-compatible; 720 KB drives only)
Any other capabilities depend on a special software.
Transmission mode:
- parallel: real speed 11.25 kilobytes per second with DOS or 22.5 kilo-
bytes per second with special track-copier.
Notes:
Because of the 1772-registers available in 6502 i/o pages ($D100),
the KARIN MAXI drives look full-programmable.
Preferred systems: My-DOS, SDX.

==> XFD-601B
Double head 360 KB/5,25" disk drive. Controller WD 1772, CPU 8051.
Available formats:
- standard SS/SD 90 KB
- standard SS/ED 130 KB
- standard SS/DD 180 KB
- standard DS/DD 360 KB (XF-551 compatible)
Transmission modes:
- normal 19200 bps

- Top Drive 1050 70000 bps
- Indus GT (synchromesh) 70000 bps (GTSYNC.COM and INDUS.SYS are not necessary; full-compatibel with the SDX)
- Ultra Speed 70000 bps (full-compatible with the older SpartaDOS)

Notes:
Customized sector skew. In fact, the XFD-601B is a original clone of the XF-551.

==> XFD-602B
The two XFD-601B drives in the one unit.

Subject: 12.2) How can I use 3.5" floppy disks with my 8-bit Atari?

to be written. volunteers?

- Amdek
- XF551 upgrades (CSS)
- Floppy Board (CSS)
- Percom drive upgrades

==> Atari XF521
3.5" system Unreleased

Subject: 12.3) What do I need to connect a hard drive to my 8-bit Atari?

original by mailto:Krishna@max.tiac.net (Glenn M. Saunders)

For starters, you'll need one of the following interfaces:

==> Corvus hard drive (10 megabytes)
Fast but still relatively slow I/O, kludge through joystick ports for 800. Rare

==> K-Products KPI Hard Disk Drive Interface (formerly from Supra)
Some limitations on drive type and size and total number of drives in sys.

==> Fine Tooned Engineering Multi I/O (formerly from ICD)
256 byter per sector restriction. 256K and 1 meg ramdisk models.
Printer and modem, modem will handle 19.2K bps

==> Computer Software Services Black Box
Will handle all SCSI drives. Allows 9 drive access for MYDOS. Currently the only modem interface with CTS/RTS hardware flow control. 19.2K ready.

==> SWP ATR-8000
Rare daughterboard for hard drives.
I/O is probably fairly slow on this baby and there may be DOS restrictions.

==> IDE Hard Drive Interface from Konrad M. Kokoszkiewicz and Jacek Zuk
- two IDE drives can be handled as well
- up to 8388607 logical sectors per drive
- up to 8388607 logical sectors per partition

(limited to 65535 by existing disk operating systems)
- up to 15 partitions simultaneously
(limited to 9 by existing disk operating systems)
- up 58 kilobytes per second in read or write operations
(limited to 32/7 in read/write operations by existing operating systems)
- native IDE mode for a future disk operating system
- emulation mode for existing DOSes like MyDOS, SpartaDOS, BWDOS.
- booting from any partition (even on machines with non-upgraded XL OS)
- write-protection feature
- executing non-DOS software from a hard drive partition
- the partitions may be created freely (there aren't fixed partitions)
The interface operates as normal PBI device and has a connector for 130XE computers (and other, those have such connector). Tested with various Western Digital, Seagate and JVC drives. Compatible with the MyDOS 4.50, SpartaDOS 3.2g, SpartaDOS X 4.20, BWDOS 1.10 and a lots of DOS applications, demos and games.

==> Fine Tooned Engineering Multi I/O II
An IDE interface. Released?

Subject: 12.4) What is SIO2PC?

Original text by Dave Paterson

SIO2PC is a cable and software combination that lets you use your PC as up to 4 drives for your 8-bit. Drives can be SD, ED, DD or custom sizes up to 16 megs. SIO2PC also lets you redirect the printer output to your PC printer or to a file on the PC. High speed drives are emulated (a la US Doubler).

All these functions are transparent at the Atari end; you never notice the difference between SIO2PC and regular drives, except that the SIO2PC drives are faster than any others (except Ramdisks and PBI interface drives).

Several different designs for the SIO2PC hardware are floating around. Best contact the author for the latest details.

SIO2PC 4.13 is shareware by Nick Kennedy, mailto:nkennedy@cswnet.com

---

Subject: 13.1) What's the best DOS for the Atari?

This is a matter of opinion, but general consensus is that all 8-bit Atari users should treat themselves to either MYDOS or SpartaDOS to appreciate the power of the system.

Either MYDOS or SpartaDOS will work with almost any disk drive, up to 8 drives or hard disk partitions, and ramdisk.

MYDOS is modelled after Atari DOS 2.0S/2.5, but provides subdirectory and hard-drive support. MYDOS 4.53 is freeware from Wordmark Systems (Charles

Marslett and Bob Puff). There are two versions of MYDOS 4.53, one uses 3 digit sector numbers where possible, known as 4.53/3; the other, known as 4.53/4, uses 4 digits minimum. Complete documentation about the disk formats and commands, as well as the source code, is available.

SpartaDOS is a completely different command-line DOS modelled after MS-DOS, though it is perfectly capable of reading all Atari DOS and MYDOS disks. SpartaDOS 3.2g is disk-based; SpartaDOS X 4.22 is cartridge-based and includes many additional features. SpartaDOS is available from Fine Tooned Engineering (see companion vendor/developer list).

It is recommended that all 8-bit Atari users own at least DOS 2.5 for complete compatibility with existing software, and then choose either SpartaDOS or MYDOS as they see fit. DOS 2.5, MYDOS and SpartaDOS are all available on the archives.
filenames: Os/dos25.arc (DOS 2.5)
Fte/fte32g.arc (SpartaDOS 3.2)
Os/mydos453.dcm (MYDOS - latest version)
Os/mydos45m.arc (MYDOS - latest complete doc's)

Any other versions of DOS all 8-bit Atari users should be aware of??

Subject: 13.2) What hardware has Atari created in the 8-bit computer line?

Computers:
400 Personal Computer (1979) 8/16K, membrane keyboard, 400/800 OS
800 Personal Computer (1979) 8/16/48K, two cartridge slots, 400/800 OS
1200XL Home Computer (1982) 64K, early XL OS, F1-F4 keys, 4 LEDs
600XL Home Computer (1983) 16K, BASIC, PBI, XL OS
800XL Home Computer (1983) 64K, BASIC, PBI, XL OS
65XE Personal Computer (1985) same as 800XL minus PBI
130XE Personal Computer(1985) same as 65XE with 128K plus ECI
800XE Personal Computer(1987?)~same as 130XE but 64K. Mostly eastern Europe.
XE Game System (1987) same as 65XE plus Missle Command, detach keybd

Peripherals:
410 Program Recorder -Japan and Hong Kong versions
810 Disk Drive -SS/SD 90K with DOS 1 or DOS 2.0S,MPI&Tandon vers.
820 Printer -40 col.
822 Thermal Printer -40 col.
825 80-Column Printer -req. 850
830 Acoustic Modem -300 baud req. 850, with Telelink I software
835 Direct Connect Modem -300 baud, with Telelink II software
850 Interface Module -4 9-pin serial, 1 15-pin parallel ports, beige & black metal versions
1010 Program Recorder -Sanyo and Chelco versions
1020 Color Printer -40 col.(80 by command) print/plot in 4 colors
1025 80-Column Printer -7-pin dot matrix
1027 Letter-Quality Printer-80 col. letter quality =Mann-Tally Riteman LQ
1029 Printer -7-pin dot matrix, same as Commodore MPS-801

1030 Direct Connect Modem -300 baud, with ModemLink software
1050 Disk Drive -SS/ED 128K with DOS 3 or DOS 2.5
1064 -64K RAM module for 600XL
XC11 Program Recorder
XC12 Program Recorder
XM301 Modem -300 baud, with XE Term software
XMM801 Printer -80 col. Ribbon: Mannesman/Tally MS80
XDM121 Printer -80 col.letter quality. Ribbon: Silver Reed CF130
XF551 Disk Drive -DS/DD 360K with DOS XE
XEP80 Interface Module -80 col. video display and DB25 parallel port
SX212 Modem -1200 baud, rarely with SX-Express! package

Atari 8-bit vaporware computers: (note some are more vaporous than others)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE sound chip

Atari 8-bit vaporware peripherals:(note some are more vaporous than others)
815 Dual Disk Drive -2 x SS/DD 180K with DOS 2.0D
1055 -a 1050 (SS/ED) with a 3.5" mechanism
1090 XL Expansion System-for PBI, CP/M/MS-DOS/Apple II compatible
XM128 -12" green monitor w/ built-in 80-column card
XC1411 -composite 14" color monitor
XF521 -5.25" floppy drive - 1050 compatible, in XE style
XTM201 -non-impact printer
XTC201 -non-impact color printer

Subject: 13.3) What are the power-supply requirements for my Atari components?

As with the rest of this FAQ list, please let me know if any of this information conflicts with the units you have. I'm also not sure how much of this section is valid outside North America. If it's not valid where you are, I need to hear from you!

The most important information is the voltage (in volts) required, and whether you need a transformer (AC output) or an adapter (DC output). The power (in watts) and current (in amperes) specifications of the original equipment as presented here should be regarded as minimum values. Higher-than-specified power and current capacities are entirely usable, and often preferable because such supplies run cooler and last longer.

Relevant law of physics:
Power (in watts) = current (in amps) * voltage (in volts)

9 V AC 5.4 VA (600 mA) Atari#CO62195 transformer:
1030

9 V AC ???? VA (??? A) Atari#CO61516 transformer:
1010
9 V AC 15.3 VA (1.7 A) Atari#CO14319 transformer:
400,800,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA014748 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 18 VA (2.0 A) Atari#CA016804 transformer:
400,800,810,822,850,1010,1200XL
9 V AC 31 VA (3.4 A) Atari#CO17945 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551
9 V AC 50 VA (5.6 A) Atari#CA017964 transformer:
400,800,810,822,850,1010,1200XL,1020,1050,XF551

9.5 V AC 40 VA (4.2 A) Atari#CO61636 transformer:
1027

24 V AC 3.6 VA (150 mA) Atari#CA016751 transformer:
830

5 V DC 1.0 A (5.0 W) Atari#CO70042 adapter:
65XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CO61982 adapter:
600XL,800XL,65XE,130XE,XE Game System
5 V DC 1.5 A (7.5 W) Atari#CA024814 adapter:
600XL,800XL,65XE,130XE,XE Games System
5 V DC ??? A (??? W) Atari#CO81982 adapter:
XL/XE

6 V DC 300 mA (1.8 W) Atari#??????? adapter:
"410P"

9 V DC 500 mA (4.5 W) Atari#CO16353 adapter:
XEP80,SX212,2600
9 V DC 500 mA (4.5 W) Atari#CA014034 adapter:
XEP80,SX212,2600

9.3 V DC 1.93 A (18 W) Atari#CO18187 adapter:
Indus GT,5200
11.5 V DC 1.95 A (22 W) Atari#CA019141 adapter:
Indus GT,5200

5 V / 12 V DC 1.1 A (5.5 W / 13.2 W) Atari#CO62297 adapter:
1400XL,1450XLD

These draw their power from the SIO +5 V:
XM301 (60 mA),XC12,ICD/FTe P:R:Connection

Draws power from the 600XL PBI:
1064

These have built-in power supplies (plug directly into the wall):
410,815,820,825,1025,1029,XMM801,XDM121

The power supply requirements for the following are still needed:
??? V DC ???? A (???? W) Atari#CA060535 adapter:
835

XC11 program recorder (no brick needed -> internal or SIO source?)

OTHER:
The ICD/FTe Multi I/O (MIO), all versions, can use both AC and DC supplies.
But stick to voltages of at least 6.2-7.2 V.

Subject: 13.4) What are the pinouts for the...?

Subject: 13.5) What BBS software can be used on the Atari?

This section by mailto:winston@merk.com (Winston Smith)

Here is the run down of ATARI 6502 8-BIT BBSes that I am aware of:

o A.M.I.S. BBS -- The A.C.E. Message Information Service.
This BBS was written in BASIC by the Atari Computer
Enthusiasts computer club (was it the Michigan chapter?). It included
designs for a ring-detector. You needed a sector editor and had to
allocate message space by hand, hex byte by hex byte.

o FoReM BBS -- Friends of Rickey Moose BBS.
At the time, there were a lot of BBSes around
called things such as "FORUM-80" and "BULLET-80", ergo the name. FoReM BBS
was the first truly RBBS-like BBS for the ATARI 8-bit. It was programmed

in BASIC and was somewhat crashy. I think that this is the
great-grandparent of the FOREM-XE BBSes that survive today.

Matt Singer, mailto:msinger@oe.fau.edu writes:
FoReM BBS derived from an early AMIS. When multiple message areas were
added the name was extended to FoReM 26M. Then, When OSS released BASIC
XL the program was rehacked and called FoReM XL... Bill Dorsey wrote most
of the Assembler routines (where is he now?).

o ABBCS -- The ANTIC Bulletin Board Construction Set.
The user design of the ABBCS was very good. It sported
features such as intra-line editors. Unfortunately, the coding of the
ABBCS was really poor. You could practically blow on your keyboard and
crash this BBS. The BBS would sometimes crash several times a day.

o NITE-LITE BBS -- Paul Swanson's BBS with RAM disk.
Paul Swanson was a programmer from the Boston,
Massachusetts, USA, area. I'm not sure whether his BBS for the
Atari 8-bit has been placed into the public domain or not. This BBS was
the first to support a RAMdisk, which Paul Swanson called a "V:" device
for "virtual disk". This BBS was written in Atari BASIC and required a
joystick hardware "dongle" device. This was notable as being one of the
first Atari 8-BIT BBSes that could actually go for a week without having
to be rebooted. Pointers to the message base were kept in an Atari "very
long string" (for which Atari BASIC is famous). The BBS would only have
problems (for the most part) if this string became corrupted.

o ATKEEP -- An Atari 8-bit version of CITADEL BBS.
I believe that AT-KEEP, like FOREM-XE, requires the use of
the commercial BASIC XE cartridge to run. This BBS program was very
popular around Louisiana, USA, from what I understand.

o Benton's SMART BBS -- BBS written in BASIC by Marco Benton.
This program is written entirely in BASIC. It
expects to be running under a SpartaDOS environment. This was a problem
until very recently, when the disk-based version of SpartaDOS was
re-released as shareware. This BBS program uses a "modem clock string"
rather than an R-Time 8 cartridge in order to retrieve the current time.
It also comes with an Atari BASIC game door called "Sabotage".

o FOREM-XE -- FOREM using BASIC XE.
This version of FOREM BBS requires the commercial BASIC XE
cartridge in order to run. It is in the public domain and can import and
export messages from the Atari PRO! BBS EXPRESS-NET (7-bit text only,
control ATASCII graphics are reserved for message data-structure bytes).
FOREM-XE BBS is still currently in use as we speak, and may be reached via
the PRO! EXPRESS-NET as long as the cross-networking "transnet" is still in
effect.

o The BBS Express -- PRO! BBS demo program.
This is the public domain version of EXPRESS!-BBS,
which is the Keith Ledbetter companion project of the EXPRESS!-TERM

terminal program of days gone by. I am not familiar with this program. I think that it is written in Action! and only supports XMODEM Checksum transfers. I have never called or seen this program demonstrated.

o OASIS JUNIOR III -- OASIS BBS demo program.
OASIS JUNIOR III is the --ALL MACHINE LANGUAGE--
demo version of the OASIS BBS program. OASIS is very crash-resistant and comes with a "dial out" screen so that the Sysop can use the BBS as a terminal program to call and fetch files without having to bring the BBS down and reload a terminal program. OASIS supports "Door programs" which it refers to as "OASIS PAL modules". This OASIS demo module comes with an excellent message system. The OASIS file system is one of the most complicated that I have ever seen. It consists of "file libraries" with suites of "file types". There is quite a bit of overhead involved in performing a download (which may be a good thing, as it discourages file hogs). There is a commercial version of OASIS called "OASIS IV" that performs networking. There was an OASIS network between Boston, Massachusets, USA and Murfreesboro(SP?), Tennessee, USA. Occasionally word of the OASIS IV developers reaches the network from New Zealand or Canada.

o Frank Walters BBS -- I know nothing about this BBS except that Frank Walters wrote it.

OASIS IV, CARINA, and BBS-EXPRESS-PROFESSIONAL! are all commercial programs. I haven't heard anything about OASIS IV and CARINA for a while, but PRO!-BBS is still a viable commercial enterprise last that I had heard.

Subject: 13.6) What version of Atari BASIC do I have?

At the READY prompt, enter "? PEEK(43234)"

If the result is: You have Revision:
162 A
96 B
234 C

Subject: 13.7) What are the Standards for Used 8-Bit Stuff?

Developed by mailto:b.poehland@genie.geis.com (Ben Poehland)

When selling used 8-bit Atari equipment in the comp.sys.atari.8bit/Info-Atari8 Digest/INFO-A8 discussion group, please consider describing the condition of the materials you are selling using these standards. This will go a long way toward preventing potentially highly-contentious misunderstandings. Usage is voluntary, but recommended.

LN (Like New)-- Item is pristine, unused, w/all manuals & original packaging materials.
EC (Excellent Condition)-- Item is little used, good working order, physically clean, may have a very few minor cosmetic blemishes, w/original

manuals.
GC (Good Condition)-- Item is in good working order but slightly soiled,
contains worn parts or minor scratches/dings that betray heavy
service or old age, w/original manual or copied manuals.
FC (Fair Condition)-- Item in working order but missing manuals/accessories;
heavily worn/soiled or cosmetically damaged.
BC (Basket Case)-- Item does not work, is damaged/butchered, missing manuals &
accessories etc., but contains salvageable parts.

Subject: 13.8) What games support 4 simultaneous players on the 400/800?

The following games support 4 player head-to-head play. Remember, only the
400 and 800 computer models sport 4 controller ports.

Asteroids, Basketball, Breakout, Dandy, M.U.L.E., Maze War, Silicon Warrior,
Survivor.

Thanks to mailto:jlodoen@shell.portal.com (Jeff M Lodoen) for initial info.

Subject: 13.9) Why should I disconnect the 810/1050 power supply before
connecting or disconnecting SIO cables?

Rich Mier writes:

You've been plugging and unplugging the SIO cable with the 1050 power pack
plugged in, right? That's a no-no. Most of the time it's Okay, but about 1 in
10, 20 times, it will blow out 'U-1'. It's a CA/LM 3086 I.C. at the right,
rear of the main board. A 14 pin DIL chip. Actually it is an array of 5
transistors.

Unplug the power pack from the 1050, then unplug the SIO cable. Power can be
ON on the CPU. The problem has to do with the secondary winding of the Power
Pack. Remember, the problem only occurs 1 out of 10 - 20 times that you do it,
not all the time.

It doesn't really matter if the 1050 Transformer has power on or off, it
'Might' happen if plugged into the 1050. It is really bad on 810's.

One thing, if the system has been turned off for, oh say, 5 - 10 minutes it
won't matter. By then all the capacitors should be bled(sc?) to 0 volts.

Subject: 14.1) What vendors, developers, or publishers support the 8-bit
Atari?

See the "Atari 8-Bit Computers Vendors and Developers List." The latest
version may be obtained in the following locations, among many others:

ftp://rtfm.mit.edu/pub/usenet-by-group/news.answers/atari-8-bit/vendev
http://www.cs.ruu.nl/wais/html/na-dir/atari-8-bit/vendev.html

news:comp.sys.atari.8bit news:comp.answers news:news.answers
mailto:mail-server@rtfm.mit.edu , message says:
send usenet/news.answers/atari-8-bit/vendev
quit

You can also ask me for a copy at mailto:mcurrent@carleton.edu

---

Subject: 14.2) Where is my nearest 8-bit Atari BBS?

1) Oscar Fowler maintains a list of BBS's supporting the 8-bit Atari. He posts his list to comp.sys.atari.8bit every once in a while.

You can ask Oscar for his list at: mailto:oscar@primenet.com

2) Rick Detlefsen is presently compiling a new comprehensive Atari computers bulletin board systems list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

Or by Mail: ATARI BBS LIST
C/O RICK DETLEFSEN
8207 BRIARWOOD LANE
AUSTIN, TX 78757-7642

Subject: 14.3) Where is my nearest 8-bit Atari user group?

Rick Detlefsen is presently compiling a new comprehensive Atari computers user groups list. Contact him by any of the following for more information:

Rick Detlefsen Compuserve:74766,1561
Genie:R.DETLEFSEN
Internet: mailto:74766.1561@compuserve.com

Or by Mail: USER GROUP SURVEY
C/O RICK DETLEFSEN
8207 BRIARWOOD LANE
AUSTIN, TX 78757-7642

Subject: 14.4) How do I use my new or emulated Atari?

"The Unofficial Atari 8-bit New User, Emulator Help FAQ" is maintained by mailto:kendrick@zippy.sonoma.edu (Bill Kendrick). Bill and his FAQ are excellent sources for information on basic usage of the 8-bit Atari, and for information on the 8-bit Atari emulators which run on other computing platforms. See:

http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html

Subject: 14.5) What prominent Atarians are reachable by e-mail?

The "Who's Who in the Atari Community E-Mail Directory" includes people involved in all of the Atari computing and gaming platforms. This directory is maintained by the managers of the Cleveland Free-Net Atari SIG. Write to mailto:xx004@cleveland.freenet.edu (Atari SIG) or see: http://ace.cs.ohiou.edu/personal/mleair/whos_who.html

Seems there were a lot of Atari programs from the UK heydays that have been forgotten and lost. I used to get a magazine called "Your Computer" that was chock-full of ads (or adverts as they called them) for many different computers, mostly for the Spectrum (basically a color Timex) but some were for the Atari. Some of them that looked interesting were "Mugsy", "Cuthbert", and too many that I don't remember now. There were even type-ins that I never saw anywhere else.

Any former UK-Atarians have these little gems for us to see?

DIMS'96 IS ONLINE!!!!!

Go to my homepage and click on the 'software' icon at the top of the page, you will then be shown a chart for DIMS'96. Click on the little zip 'suitcase' icon for DIMS'96 and download it. Try running DIMS'96.EXE, if you get 'file not found' errors then download the VB4RUN32.ZIP file and extract into your \WINDOWS\SYSTEM directory.

E-mail me and let me know what you think, DIMS'97 will be out sometime in the new year, once i re-learn C++! =)

>
My Indus GT broke down about 5 years ago, so I'm going on memory here...
I recall that single density disks had to be formatted while Syncromesh
was engaged. This produced a format that was actually SLOWER to read
than a normally formatted disk until DOS XL loaded in and engaged
Syncromesh. Once engaged, however, the transfer rate was significantly
higher (I think it went up from 19200 to 24xxx or 38400). As far as
double density disks, it doesn't matter whether you formatted it with
Syncromesh engaged or not. The effect that I noticed is that a DD disk
with Syncromesh beeped with about the same frequency as a SD disk
without Syncromesh (i.e., double the data transfer rate).

If you have Rainbow and an RS232 cable between the 8-bit Atari (via an 850 interface or similar) and the Mac, it should be possible. Assuming you have a disk image (ATR or whatever), run Disk Communicator in Rainbow to create a dcm file. Export the dcm file and transfer it from your Mac to the 8-bit using the software that comes with Rainbow. Run Disk Communicator on the real 8-bit to create a bootable disk.

I should warn you, I've never tried this myself, but it should work, albeit slowly. It may be easier to find a copy of the program. Perhaps someone will design something like SIO2PC for the Mac (I'm not holding my breath). Or you could go out and buy a PC--I can't think of a better use for one. ;-)

There seems to be some confusion here about ATR images...

There's nothing special about ATR files that makes them "only work on an emulator". An ATR file is simply the data on the disk squashed into one file, i.e., except for a header at the beginning, the first 128 bytes of the ATR are the first 128 bytes on the disk (the first sector), the second 128 bytes are the second 128 bytes, etc...

>>
>> It's an ATR image. But I think there are utilities available that let

>> If you have a SIO2PC cable you can use APE to do this.

>Not if you have a Mac. :)

Janice is right, there are ways to transfer an ATR to disk without an emulator or SIO2PC, as long as you have a disk on the Atari side that's big enough to hold the whole ATR file (like a 1050-formatted enhanced density floppy, or I use the RAMdisk in my 256K 1200XL). You can hack up an "ATR2DISK" program in about 20 lines of BASIC. I posted one a while back, feel free to email me and I'll send you a copy of it... (And I can BinHex it for Mac people. 8-)

Marc,
Locate a copy of SpartaDOS Cocstruction Set. It has a very nice
binary run menu system included.

Ben,
It's not that they are corrupted. They're fine. You have to have a working bootable copy of SpartaDOS 3.2f (I think 3.2D will probably work too). Boot the older version of SD then use scopy fte32g.scp to a second formatted disk. This is something similar to a DCM disk, I think. This process should make a bootable SD32G.DOS disk. I think the others work the same way. There should be a read.me file in the ARC files that tells you what to do.

> protobeastie?

From Compute!, April 1985:

"The third new 8-bit machine is an interesting variation of the 65XE
called the 65XEM (XE Music computer). It's a 65XE with an additional
sound chip, the new eight-voice "Amy". Unfortunately, this was the
only new computer Atari didn't exhibit at the show. Hoewever, those
who have heard Amy say it outperforms even the SID synthesizer chip
in the Commodore 64. Amy has a dynamic range exceeding 60 decibels, a
frequency range of nearly 11 octaves from 4.8 hertz (far below human
hearing) to 7.8 kilohertz, frequency resolution of 1/64 semitones, 64
harmonics, and many other features. Reportedly it can synthesize
almost any musical instrument sound. The 65XEM will sell for about
$150."

Actually, that's the Atari 65XEP, for Portable. Again, it was shown at a
trade show, but never released. The XEP a,d XEM were overshadowed at the
show by Atari announcing the ST line.

Must be really desperate for an Atari 8bit user since this is the only group he posted it to... unless he is individually posting this message to lots of groups.. =)

Will

3596. RE: 1450XLD ROMs and schematics

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-04 00:00:00 UTC
From: "Bruner, Glenn S., SSgt" <BRUNERGS@fafb.af.mil>
Message-ID: <327E440C@2sops.fafb.af.mil>
Source record: 79005

To the individual looking for 1450XLD info and stuff, I'm a good one to talk to. I used to own one of the engineering prototypes (#5) that had a TONG version of the motherboard. Before I sold it, to a very good friend for his collection hobby, I did make copies of the ROMs. The machine I had the following items:

- Used a SSI-263 chip for the Voice Synthesizer. This is similar to the Votrax SC-02 second generation voice chips. I have a copy of a article from Byte Magazine that goes into the SSI-263 chip and builds a voice synthesizer for the Apple II. I'm not quite sure if Brad still has some, but I think Best Electronics might carry them. If not, JDR Microdevices was the other place I found to carry them. I believe the SSI-263 was made by Silicon Systems.

- Had a 300 baud modem and used a Intel chip for the RS232 function. I don't remember exactly what chip it was.

- Had two Epson made double-sided, double-density disk drives. Both drives worked. They were mounted in the case and had a piece of sheet metal molded into a bracket and attached to the case to support the drives. Atari engineers had drilled holes into the side of the case and had screw threads poking out that were holding the bracket in place. I was able to get Atari DOS 2.0, 2.5, 3.0, and 4.0 to load on the machine, but SpartaDOS would not load. The reason is that SpartaDOS uses it's own D: driver and would overwrite the device handler address info and use it's own D: driver.

- The voice synthesizer didn't work on this machine. I don't know if the SSI-263 chip was bad or if the two prototype 40 pin chips were bad. These two chips I was told were language chips. What their exact purpose was I don't know. They were definitely prototype because someone used some scotch tape to put the gold cover on the chip package when they mounted the chip in the chip package.

- There was a small breadboarding area on the board for the engineers to add any additional circuits.

- There was a area for a 48 pin chip. This spot I was told was for a possible Apple II emulation. But haven't seen any info to prove that.

That's about all I can remember at this time about the machine. I do have the OS EPROM and the PBI handler EPROM images. The handler EPROM had the PBI handlers for the T:, V:, and D: handlers (which are the modem, voice, and disk drive). The machine had in it Basic revision C. The schematics I have say 1450XLD on them but I found really apply to the 1400XL (which I also have one of those) because it doesn't have the drive controller on the schematic or the SSI-263 chip. If I remember right the schematic probably

covered a different 1450XLD board from the TONG version I had.

Just let me know what you are looking for. Looking forward to hearing from you.

Check out the British Atari Homepage. There are pretty simple plans to
upgrade the 600xl to 64k listed there; it takes a few chips and some wire.

Technically speaking, not all the lines were the same ... the default chip
selects were addressed for C000 and D000 in the normal slot, and 8000 and
9000 in the right hand slot (as I recall).

Questron is not a game company, it is the name of a game from SSI.

Actually, Tom Hunt has written a program for the 8-Bit Itself that will
write out ATRs to Floppy disks!

I saw a picture of it a while back. It was basically a 65XE with an
integrated XEP80 controlling an internal green-screen 80-column display.
An all-in-one unit. Also very strange...

You actually just missed out, one of the last 65XEM prototypes was just
sold last week from B&C computervisions in CA. I was after the little
beast and it got away, but in the meantime I just acquired some super
rare gems:

An Atari 1600XL prototype wirewrapped motherboard
an Atari 800XL-F
an Atari 800-D (Developers Bus System)
several Atari 2600 developer S-100 bus cards
and the only 2 known to exist Atari STylus STpenOS touch pads

3604. The Atari 8-bit Hardware Upgrade,Modification and Add-On FAQ

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-04 00:00:00 UTC
From: davepat@total.net
Message-ID: <55jvp1$dcs@newsfeeder.total.net>
Source record: 79013

The Atari 8-bit Hardware Upgrade,

==========

| | |
| | |
/ | \

Version 0.4

Dated November 3, 1996

Maintained by: David A. Paterson
Mailto: davepat@total.net

INTRODUCTION

This is a very basic version. I am adding as
people give feedback to what they want to see, and how
they want to see it. Any info or comments you have are
more than welcome!

PURPOSE

This FAQ exists to describe the various hardware
modifications available to the Atari 8-bit user. It does
not teach you how to do them. It definitely doesn't take
any responsibility for the results if you do try them.
But it will try to give you some information about where
to find more information, which upgrades (or "hacks") are
best, and who to consult if things go wrong. For
addresses and phone numbers of any of the companies
listed, consult the Vendors and Developers List, posted
to comp.sys.atari.8-bit at or about the 15th of each
month.

It also exists to describe the many wild, Woolley
and wonderful products that have been produced for the
Atari 8-bit. Many are unique, some may be apocryphal.
Mainstream items like printers, modems, disk drives and
cassette decks are all excluded, unless I feel otherwise.
Temperature gauges, combination printer buffer/RAMdisks
that run through the joystick port, and other such are
fair game.

If you're looking for a list of Atari hardware
(real or vapour-ware) or for a list of Atari compatible
disk drives, check out the comp.sys.atari.8bit FAQ,

posted every two months, and stored at the University of Michigan archive (gopher://gopher.archive.umich.edu).

POSTING FREQUENCY

This FAQ is posted whenever I remember to post it. It is posted to comp.sys.atari.8bit.

OTHER STUFF I THOUGHT I SHOULD INCLUDE SOMEWHERE

This FAQ owes a debt of gratitude to Michael Current, Bill Kendrick, Glenn Saunders and Ben Corr for their contributions. Bob Woolley and Bob Puff (CSS) also deserve mention, since they are responsible for so many of the items listed here. All errors, omissions, blatant mistakes and attitude problems are mine. If you notice any, tell me!

PART I - RAM Upgrades

General

The 6502 microprocessor at the heart of every Atari 8-bit has a sixteen bit wide address bus. What this means is that it can access up to 2^16 memory locations. That's 65536 bytes. Some people, wanting more memory, came up with a variety of techniques to use more memory. Most were built around the idea of bank switching. Bank switching means that you swap chunks of memory around so that the CPU can see them when necessary. Most schemes use 16k banks, though 4k and 32k have also been tried.

Atari 400

The original Atari 400 had either 8k or 16k. Atari produced a board with 48k. Mosaic produced a 32k board, as well as a 64k board with 48k RAM plus 4 4k RAM banks. (ANL 13, IFC)

Atari 800

The Atari 800 came with three memory slots. Each slot could contain Atari 8k or 16k RAM boards. Mosaic produced 32k and 64k boards. Three 64k boards could be combined for 192k.

Axlon produced the 128k RAMdisk board. It banks 16k, using $CFFF as a control register. Banked memory appears from $4000 to $7FFF.

David Byrd created the "800 PLUS 288K UPGRADE" which rewired existing 16k RAM boards, but required additional work to become fully Axlon compatible. A nasty sort of flame war erupted between David Byrd and Jay Torres of the Windhover Project over who invented the upgrade.

Magna systems produced 256k, 512k and 1M boards which followed the Axlon standard. (ANL 65, 68)

Atari 1200xl

See 800xl.

Atari 600xl

As shipped, the Atari 600xl came with 16k RAM. Atari released the 1064 memory module which expanded the 600xl to 64k. MPP, now Supra, produced the Microram 64k Memory Board (ANL 19, 28)

RC Systems produced three expansion modules for the 600xl, raising memory to 32k, 48k or 64k (ANL 26, 12)

Richard Gore produced the Yorky, a 256k board which plugs in to the PBI. It provides full compatibility with 130xe type banking. It is for use on 600xls upgraded

internally to 64k, or on 800xls. (AC 3/2, 10)

Atari 800xl

The Atari 800xl came with 64k RAM internal. To access RAM hidden under the OS ROMs, the PIA chip was used (PORTB, used for STICK(2) and (3) on the original 800). Claus Bucholtz published plans for a 256k upgrade which banked 32k at a time using PORTB for control in Byte magazine. (Byte Sept 85)

ICD released the RAMBO upgrade, providing 256k in 16k banks, using PORTB. Newell came out with the 256k XL, which would work on a 1200xl or 800xl, providing 256k total memory, . The two upgrades used different sequences to access their banks. (ANL 44, 115)

Charles Bucholtz updated his upgrade to use 16k banks after the release of the 130xe. Most of the 800xl upgrades can be made compatible with Antic banking. The only possible problem would be when Antic and the CPU are supposed to be using different memory banks.

The Yorky will also provide 256k on an 800xl (see the entry under 600xl).

Newell released 1Meg and 4Meg upgrades for the 800xl. These banked 16k as well, and required disabling internal BASIC to properly access the memory.

Fine Tooned Engineering, having bought the rights to ICD and Newell's products, is bringing out a third method in the Mars 8. Though not yet released, it will use SIMMs for 256k, 1Meg or 4Meg RAM.

The 800xl is arguably the most popular Atari 8-bit for upgrades, since most 800xls have socketed chips.

Atari 130xe

The 130xe was the first "official" method of banking memory. It too used PORTB, but with an added twist: ANTIC and the CPU could access different banks. This provided headaches for some owners of "older" upgrades, but few programs took advantage of this feature (SpartaDos Wedge and VideoBlitz demo only). Upgrades for the 130xe include replacing one set of 64k chips with 256k chips, raising the RAM to 320k. Adding another 256k for 576k total has also been done. These were designed by Scott Peterson, as was a 1088k upgrade.

PART II - Video

Upgrades

The most common video upgrades are the SuperVideo series, described in AC 2/6. Plans were provided for the 600xl, 800xl, 1200xl and 130xe. The SuperVideo upgrade provides the forgotten chroma signal on the monitor port. It corrects a number of errors in the parts in the Atari video circuit, resulting in a clearer image, particularly on monitors.

Providing TTL output was also covered in AC 2/6. Bob Woolley provided plans for the circuit, as well as instructions for getting TTL output from an XEP80. Be warned that the output is not in the standard Atari colours; on a CGA type screen, the sixteen possible shades are translated into eight colours.

80 column devices

Since the 400/800 were released in 1979, people have been clamouring for better text displays than the default 40x24. Two products were released for the 800: The Austin-Franklin 80 column board and the Bit 3 80 column board were both for use in the Atari 800. They replaced the third memory module. The Austin-Franklin board came with a "Right Cartridge" which provided the drivers. Removing the cartridge disabled the board. Some software would not run with an 80-column board installed.

Ace 80/80xl was a cartridge released which provided 80 columns by using bitmapped graphics on an 80 column screen. A similar technique was used in the Newell Omniview, an add-on for their Omnimon.

Atari's entry into the 80 column field was the much maligned XEP80. For maximum compatibility, the XEP80 attaches to the computer via a joystick port. It includes three character sets, 8k internally, and a parallel printer port. The software provided by Atari supports a 320x200 graphics mode. This mode only supports direct bit images. Hacks have been released which hook the XEP80 on via the parallel bus.

Recent terminal programs have added two other display techniques. ICE-T uses a graphics 8 screen and fine scrolling for its display. FlickerTerm uses two graphics 0 screens a half-character apart, each displayed during alternate vertical blanks.

In a series of articles in the SLCC newsletter, Bob Woolley gave hardware plans for installing an 80-column TTL output inside an XL.

Nir-PAL

With the decline of Atari in North America, more and more quality software was migrating across the Atlantic which was all but unusable. Why? European Ataris are built for the PAL broadcast standard; North American Ataris use NTSC. Not knowing it was impossible, Nir Dary upgraded an NTSC Atari to run PAL software properly. Swap out the NTSC Antic chip for a PAL Antic, do a minor modification to the OS, and voila! Your Atari is ready to join the EU. (Better stop before the abbreviation police arrive!)

Genlock

In October and November of 1991, Michael St Pierre published articles in the SLCC Journal describing plans for a monochrome Genlock. A genlock is a system to synchronize live video with a computer image. Graphics can be overlaid, faded in or out, or used for titling.

In 1994, Michael announced Prism Studio, a full colour genlock. It is sold by Mytek.

Computer Eyes

Computer Eyes was a video capture system which plugged into two joystick ports. It could render images in a variety of modes. It required a composite video source. (ANL 35, 53)

Easy Scan

Take a cartridge, add a fibre-optic cable, and hook it onto a printer, and you've got Easy-Scan, an image scanner for the Atari 8-bit. Innovative Concepts produced this item. (ANT 7/6, 43)

PART III - Operating Systems

The original 400/800 had a 10k ROM OS. There was nothing in memory from $C000-CFFF. The later xl/xe models all had 16k OSes. As an added bonus, the xl/xe OS was in a 28 pin ROM that was pin compatible with a 27128 EPROM. What does this mean to the layman? With a little knowledge of 6502 assembly and an EPROM burner, you can write your own operating system (or at least change Atari's).

Computer OS
-------- --

400/800 Rev A. No self test; Memo Pad mode.
Rev B. Fixes several bugs in Rev A.

1200xl XL OS. Some incompatibilities with 400/800 OS

600xl/800xl Revised XL OS. Includes parallel
bus handlers. Internal BASIC.

65xe/130xe Revised XL OS. (as above)

xegs Modified XL OS. Self-test mode
changed. Internal Missile Command
and BASIC.

Operating System upgrades

UltraSpeed + OS : from CSS. Supports high speed disk
communication. Drives 1 through 9. Any RAM upgrade.
Includes three modes: standard XL/XE OS; 400/800 OS;
UltraSpeed+ OS. For XL/XE systems.

Omnimon: from Newell. M/l monitor for 400/800. Installs
into $C000 page of memory, otherwise unused.

RAMROD OS: from Newell. Replacement for 400/800.
Includes accelerated floating point math package.

RAMROD XL: from Newell. OS speed-up routines, fast math,
and Omnimon. Includes option for second OS.

XL Boss: from Allen Macroware. OS replacement for XL
model computers. Includes m/l monitor. 400/800 OS
compatible.

TurBoss: available from KP and Best. Fast math and fast
screen routines. For XL/XE computers.

Turbo 816: Chuck Steinman at Dataque released a modified
OS that used the 16 bit capability of the 65816 CPU
upgrade he sold. For XL/XE computers.

DP OS Version 4: my own effort (don't ask about versions
1 through 3!). Fast floating point math, fast screen
display, graphics 0 screen dump, fast keyboard repeat.
For XL/XE computers.

SmartOS: This is a hardware upgrade that installs a
battery-backed RAM chip into your XL/XE. This lets you
fool around with changing the OS and not have to burn new
EPROMs constantly. Presented in AC 4/3.

PART IV - Sound

Voice Master

Covox sold the Voice Master and Voice Master
junior. These would capture and record speech. Bundled
software attempted recognition of commands, with limited
success. (ANL 47, 44)

Parrot

The Parrot was a sound digitizer sold by Alpha Systems. Resembling a paddle, the device had phono jack for input. Antic provided plans for a similar project, called the Antic Sampling Processor. (ANT 8/8, 11)

SoundMouse

Among the more esoteric products ever released was the SoundMouse, which interpreted sound to provide a reading on a paddle register. It did not act as a digitizer, like the Voice Master and Parrot did. Bundled software made the lava lamp look mainstream in its appeal. No commercial applications taking advantage of this unique device were released.

Gumby

Chuck Steinman of DataQue created this set of plans for building stereo sound by installing a second Pokey chip (Pokey and Gumby, get it?). Once installed, the second channel has all its addresses 16 bytes higher in memory ($D210 - $D21F). A small number of demos have been released in stereo.

available at the umich atari archive

POPS

Lee Brilliant, ANALOG's resident hardware guru, came up with this system for stereo sound, running it off the clock line on the SIO bus. As with Gumby, it requires customized software to use. (ANL ???)

MIDIMATE

MIDI stands for Musical Instrument Digital Interface. It is a system for computers to record, replay and control musical instruments. MIDIMATE, when combined with MidiTrack software, permits an Atari 8-bit to take control. Why buy an ST? (ANL 33:26)

SIO-2-MIDI Interface

This is a set of plans to make your own MIDI interface. Limited software is included.

available at the umich atari archive

PART V - Disk Drives

Happy Computing

Atari users were notorious for their software piracy. The Happy Drive (originally for the 810, later for the 1050) contributed to that reputation. It was a modified 810, which could duplicate copy protected

software. Thus began a war between crackers and software houses. It also included a full track buffer, which sped up operations and reduced the painful grinding sound of the 810 at work. The 1050 version also made the 1050 into a true double-density drive; the last version would let the modified 1050 read and write 180k MS-DOS disks.

US Doubler

The Atari 1050 drive was brain-damaged from the very beginning. Rather than add a few dollars worth of parts to make a true double-density drive, Atari invented their own format, called "dual-density", which stored 130k on a disk. ICD produced the US Doubler, a hardware add-on that gave the 1050 true double-density. As an added bonus, it also included UltraSpeed, which made "the normal beep-beep of Pokey sound like staccato machine gun fire" according to one review. A variant was produced which added 4 to the drive number, permitting drives to be addressed as D5:-D8:.

The Super Archiver

This was CSS's entry into the 1050 DD sweepstakes. It included a high-end crackers' toolbox, letting you edit sectors, create phantom sectors and other fun stuff.

The Bit Writer

Eventually, software companies came up with a new copy-protection technique: use 34 sector tracks and repeating sector numbers, so you get a "different" sector #7 depending on where the disk is when you ask for it. CSS to the cracker's rescue again! The Bit-Writer reads in tracks from the disk and stores the bit pattern. This can then be re-written. Ironically, the software disk that came with this upgrade to the Super Archiver was created on a non-Atari machine, so users couldn't copy it.

The XF551 Update

Atari's last disk drive for the 8-bit wasn't quite perfect. This replacement OS ROM from CSS fixed a number of bugs (can't switch back and forth between SD and DD properly), and sped up the drive. A warning on upgrading the XF551: The main PC board is lousy. It's REALLY easy to break traces - even unplugging SIO cables can do it. BE CAREFUL!

The XF Single and Dual Drive Upgrades.

CSS introduced these for the XF551. You could
either replace the 360k mechanism with a 720k one, or add
a 720k to the 360k. Software included let you read and
write IBM disks.

Bob Woolley's 3 1/2" XF551 Upgrade

Once again, someone couldn't leave well enough
alone, ripped apart Atari hardware, got bored with merely
improving the OS ROM, and swapped out the 360k 5 1/4"
mechanism for a 720k 3 1/2" one. This was sold by an
outfit called Innovative Concepts.

512k ROMDisk

From Klaus Peters in Germany, this system provides a
solid-state alternative to floppy and hard disks. Using
up to 8 27512 EPROMs, this setup provides high-speed PBI
access to commonly used software

Amdek 3" drive

Amdek released a new standard for disks: a rigid 3"
plastic disk that could store a whopping 360k (but you'd
have to flip the disk for that). It never caught on.

MIO

ICD manufactured this wonderboard in 1987.
Connected to the PBI or ECI, it provided either 256k or
1Meg of RAM, two RS232 ports, a parallel printer port and
a SCSI hard drive port.

MIO II

Currently under development by Fine Tooned
Engineering, this PBI/ECI board will provide an interface
and power supply for an IDE hard disk. It may also
include extended memory support for CPU upgraded
computers, as well as a parallel port.

Black Box

CSS manufactures the Black Box, a PBI/ECI device
that offers an optional 64k printer buffer. Its main
attractions are its m/l monitor, 19200 baud RS232 port,
parallel port, and hard disk interface. The parallel and
serial ports do not use standard DB9 or DB25 connectors;
custom cables are required.

Floppy Board

This is an add-on to the Black Box, also from CSS.
It permits standard floppy drives, 360k, 720k, 1.2M and
1.44M, to be attached to the Black Box. Since they are
connected to the PBI, these drives operate extremely

quickly. Software included lets you read and write to MS-DOS format disks.

Supra/KP Hard Disk Interface

Supra released one of the first hard drives for the 800xl. It hooked up via the PBI. KP bought the rights to the interface from Supra.

Corvus Hard Disk System

The earliest hard disk interface, the Corvus system hooked up to a 400/800 via joystick ports 3 and 4. A custom DOS would be booted from a floppy disk to permit the computer to access the hard disk, which was divided into 720 sector partitions.

IDE Hard Drive Interface v1.0

New from Poland, this promises to let your XL/XE take control of new IDE hard disks. Its design will permit future systems to break the 16 megabyte boundary.

mailto: CONRADUS@plearn.edu.pl

Bob Woolley's IDE Interface

Some guys are constantly hacking hardware. And then there's Bob. Memory upgrades? PBIs for 1200xls? 80 column devices? Battery-backed RAM operating system? Somewhere, after all those, he found the time to interface the xl/xe parallel bus with an IDE hard drive. Plans to be published in the next Atari Classics magazine.

ATR-8000

SWP Computer Products made this original wonder-widget: Serial and parallel ports, standard floppy interface, optional hard disk interface and even CPM and MS-DOS add-ons.

Critical Connection

A long time ago, in a galaxy far, far away, was a mystic operating system known as CPM. A company named USS Enterprises produced the Critical Connection, a device to permit a CPM computer to emulate disk drives for the Atari. It was a cable, plus software for the CPM end of the system. The CPM system could also act as a printer buffer, and the CPM keyboard could be used in the place of the Atari keyboard. (ANL 39,103)

SIO2PC

With the demise of CPM and the rise of the IMI cartel (IBM-Microsoft-Intel) a new system similar to the Critical Connection arose. Nick Kennedy developed the SIO2PC hardware and software, which permits any PC with a serial port to act as up to four disk drives for an Atari. It can also act as a printer buffer.

APE

Stephen J. Tucker took SIO2PC one better and wrote new software. The Atari Peripheral Emulator (APE for short) lets your PC act as high-speed drives. It lets you print to your PC printer. And it lets you use your PC modem on the 8-bit. It also permits, with a special cable, the creation of backups of copy-protected disks.

available at the umich atari archive

PART VI - Other Neat Stuff

Zucchini

In ANL 59,60 and 62, Dr. Lee S. Brilliant provided plans and software to turn a surplus Atari into a printer buffer for another Atari. He called it "The Atari Zucchini".

The Printer Buffer Routine (PBR) and Disk Emulator Routine (DER) came from B.L. Enterprises. They were cartridges and cables which worked in a similar fashion to the Zucchini. The PBR provided a buffer, while the DER emulated a disk drive on the remote computer. Stock XLs gave 403 free sectors; a 130xe would give 914. (ANL 65, 67)

PIA2

With the use of PORTB for RAM banking, hackers were looking for more parallel outputs. This plan, for adding one more PIA chip, includes notes for adding two more. It was intended as a means to control large RAM upgrades. (AIM 3/2, 16)

WIMA Radio, Lima, Ohio

This radio station, when automating 6 broadcast hours daily, created a hardware and software package built around a 130xe for control. Control was via joystick ports and tone decoders. (ANT 8/7, 30)

Comp-U-Temp

This provided 8 or 16 channels and 2 or 4 sensors. It would monitor the temperature, with options to log results to disk or printer, or to sound an alarm if the

temperature strayed out of set boundaries. The software was described as "cumbersome". (ANL 48, 35)

Atari Lab

During one of their periodic restructurings, Atari decided to sell their computers as educational. Thus, the Atari Lab series was produced. The two kits released provided experimenters with tools to measure light and temperature. Of course, the next restructuring left this an orphan product.

Turbo 816

Released by DataQue, this provided a replacement OS as well as a replacement for the 6502 CPU. A 65816 was substituted, providing new opcodes and a 24 bit address space (16Megs vs 64k with the 6502).

Sweet 16

Released by Fine Tooned Engineering, this provides a 65816 CPU to replace the 6502.

Bob Woolley's 65816 Upgrade

Notice one name popping up again and again? In AC 3/3, Bob began explaining how to add a 14 mHz 65816 to your xl. That's right, parallel processing. Complete plans were never published.

MicroNet

Supra provided the Atari community with its first networking product. MicroNet provides nine SIO connectors. Eight are for computers. The ninth goes to whatever peripherals are to be connected. The system served to isolate the computers electrically. It did no software checking, meaning that two or more users attempting to print or save at the same time could trash each others output. (ANL 51, 76)

MultiPlexer

CSS provided a better way to network. The Multiplexer system requires one host system which has all the disk drives and printers for the network. The slaves are connected via the cartridge port to the host, and all their disk and printer i/o is rerouted to the host. All the systems involved require their OS replaced with a special multiplexer OS.

GameLink II

The most recent innovation in networking the 8-bit Atari, GameLink II permits up to 8 machines to share information for interactive games. Currently, only the Maze of Agdagon supports this system. DataQue sells cables and the game.

J-Net

Released to on-line services and possibly to the Umich archive as well, this set of programs was designed to interface computers by the joystick port, using 3 bi-directional data lines and two control lines.

R-Time 8

This is a clock cartridge for any Atari from Fine Tooned Engineering. It includes a pass-through connector so that any other cartridge can be plugged in as well. Though primarily intended for SpartaDos, software for other DOSes is included.

???? Clock Cartridge

Announced `way back in Atari Classics 1/1, this product was intended as a replacement for the R-Time 8. Software difficulties have kept it from being released.

Mars-8

This is still under development from Fine Tooned Engineering. For 800xls only. Memory expansion of 256k, 1M or 4M. Install internally Action, Basic XL/XE, MAC/65, SpartaDos X, R-Time 8.

Atari 850

This device hooks into the SIO line, and provides 4 9-pin RS232 ports and a 15-pin parallel port. The RS232 ports are NOT IBM PC standard. The MIO and PR Connection use the same pinout.

P:R: Connection

This device plugs into the SIO line, and provides 2 9-pin RS232 ports and a 15-pin parallel port. It is powered by the SIO line. The Atari 1200xl requires an internal modification to work with this device, or with the Atari XM301 300 baud modem.

Siders' Serial Interface

With 850s and P:R: Connections becoming increasingly rare, Kenneth Siders released plans to build a high-speed serial interface using only 2 ICs.

Atari 1090XL Interface Box

Ever look in the back of an Apple II or an IBM PC, and envy the expansion cards? Atari was planning to release a similar expansion box. The full specs were written up, and prototypes were sent out to hardware developers. As usual, Atari took this great idea, buried it, and forgot about it. These are EXTREMELY rare; I've only ever seen two for sale. Definite collectors pieces.

MPP 1000 Modem

The joystick port is a parallel port. The SIO port is a serial port. So where would you hook up a serial modem? MPP (now Supra) plugged a 300 baud modem into the joystick port. Running at 300 baud, with software that couldn't d/l files longer than 32k (an Xmodem bug), this is what got me started in the on-line world, and what got Supra started in the modem business. Wonder if I could trade in my old 300AT for a new 33.6k?

Voice Box II

Manufactured by the ALIEN Group, this speech synthesizer even made it into TIME Magazine in their "Machine of the Year" issue in 1982. Plugging into the SIO line, this device would produce speech of the traditional computer variety.

R/128 RAMdisk Printer Buffer Spooler

Protronics of California announced this 128k RAMdisk/printer buffer which interfaced via the joystick ports, offering it as a replacement for the 850. A 512k upgrade was promised. (ANT 2/8, 106)

N1858-32

Newell Industries announced this 850 replacement in 1983. It offered two serial and one parallel port, along with an expandable 8k printer buffer. (ANT 2/8, 106)

Oscar Model 1

This bar-code scanner was from the Databar Corp. The intent was to permit the speedy entry of computer programs which would be encoded in magazines. (ANT 2/8, 107)

1200XL PBI

Hackers love the 1200xl for two reasons: because of all the space available within the case, and because of the great keyboard. Bob Woolley came up with this set of plans for adding a parallel bus interface to the 1200xl.

available at the umich atari archive

Arm Your Atari

ANALOG magazine provided this unique information on interfacing an 8-bit to a Radio Shack Armatron remote controlled arm. Positioning was determined using the paddle/potentiometers, and control was via the PIA (joystick pins).

=== End ===

OK. Here is my situation. I have access to all the 8 bit software archives through my PC, and I can download them to disk and make some of them work with the various emulators. I also have a 130XE, with 1050 disk drive and a lot of software on floppy disk, all working properly.

What I want to know is this: is there any way to copy the .atr/.xfd/.bin, etc. files from my PC hard drive onto floppy disks which will run on my Atari? I've read the FAQ and looked at the APE stuff, but I'm wondering if I have any other options.

Also, does anyone have the APE system working, and if so, how well does it work? If I do invest the money, can I download, say, AtariWriter, and be able to save/print files? What about software with heavy disk-access and storage (like role-playing games/Infocom text adventures) My main concern is that if I do shell out the money for the cable, etc. that the programs will work 100%.

Please reply by post or email.
Thanks,
David Falcon

Hello!

Everybody, that provides a homepage for the 8-bit ATARI computer, please
send me an email with the URL. I want to make a list of all available
resources (http, ftp, or any else)

Your email should have the subject "atari8 URL" and should contain the
following text block:
URL: http://foo.bar/path/file.html
TITLE: The great bla bla bla...
AUTHOR: Name <email>
CONTENT: {a short list of topics, no longer than 2 x 79 chars}

One email may contain two or more blocks, that should be divided by a blank
line. Additional comments should be marked with "REM: " and are NOT published
to the public.

Please use personal email and do not post a follow up articel. I will make
a list of all the information send to me and post it in two or three weeks.
(as plain text and maybe as HTML hypertext, that you can use on your homepage)

Thanks for your help.

Sorry about that, Steven. Since the preferred solution, of which I spoke, involved only rewriting a portion of the Operating System, there weren't any hardware instructions I could offer. But, having just transferred several hardware modification files from my old Atari BBS Hard Drive to my PC, I can now offer you the following file, authored by one of our locals in this group, in its original form:

THE FREEZER

There is one upgrade that can be applied to an Atari XL/XE which is near and dear to my heart.... extra memory (256K). Many programs that are only OK when run from a disk drive, come alive if you execute them from memory. The PaperClip spelling checker is a good example of this. If you have a 256K machine, the dictionary will load completely into memory and will search a list of words instantly. There are also programs whose capacity is increased tremendously by the 256K upgrade. (PaperClip, a word processor, will hold 112,000 characters vs. AtariWriter's 20,000 or so). Great stuff, but..... a few complaints. How do you use a ramdisk with a program or DOS that is not written for them?? Also, when you turn off the power to a 256K memory chip, the data that is stored in it does not disappear in a few hundredths of a second as it did with the older and less efficient 16K and 64K devices. The operating system, which controls the power on and reset sequences, only checks a few bytes of memory to determine if the power was just turned on (the locations would be garbage), or if you had hit the RESET key (the locations would equal specific values). If, after powering off and then on (in order to re-boot your system), those bytes have retained their data, the system may branch through a warm (RESET key) start, instead of taking the proper path through cold (power on) start. This forces you to allow enough time to elapse after power down for those key addresses to lose their data. A repeat of power off/power on isn't going to help unless you wait the required interval (like 10 to 15 seconds...). This waiting around is very annoying - didn't you get this extra ram to save time??
So?? This is nothing new to those of you that have expanded systems.
How do we fix it??

Relief arrives as a small hardware modification that allows you to force a cold start and boot the system with the RESET key (which will normally produce a warm start and no boot). With this circuit installed, you can re-boot your computer without turning off the power and losing the data in the extended memory banks. This means that you can install a ramdisk, load it with data and then re-boot the system from the ramdisk. Using a menu created for this purpose, programs that do not support a ramdisk - even a game, can be run - if you can force a coldstart without turning off the power (anyone want to write the menu for this??) Also, you could be operating with a ramdisk, boot a different program, run for a while, and then re-boot the original program with the ramdisk memory intact. And, of course, you don't have to wait for the memory to blank out after you power off. (a warm start is cooled down to a cold start any time you wish..... hence, the FREEZER.)
This is accomplished by making the computer think that you have changed the status of the cartridge, either removed one that you were using, or plugged one in where you had not had one before. During reset, the operating system checks the cartridge status since the last power on. If it sees that the status has changed, it executes a cold start and re-boots the computer. This upgrade allows you to change that status when you press the FREEZER switch (the one you will add). This means that if you hold the FREEZER switch down, push RESET (and OPTION, if you don't want BASIC), and wait until the screen goes black(off), you will get a cold start. If you hold the FREEZER switch down too long and the screen restarts before you release it, you can just push RESET alone to cold start. Accidently hitting the FREEZER switch while you are running will lock your computer, but as long as it is not active when you RESET, it will not FORCE a cold start. You may get one anyway if your program is designed to produce one, so mount the switch in a protected spot. A little practice will get you a cold start every time.
Installation requires some soldering and cutting, so don't try this if you haven't had experience. You will need a 74HC86 IC, a small push button switch and a 1/4 watt resistor between 1K and 30K. Take your 1200XL, 800XL or 130XE apart and locate the GTIA chip. (1200XL=U19:800XL=U17:130XE=U17) You need to isolate pin 11 of the GTIA from the rest of the circuit by cutting the wiring on the printed circuit board. The 130XE requires two cuts and an added wire since the pin is between two points that you would like to keep connected. The normal circuit is: pin 14 (RD5) of cartridge - pin 8 of MMU - resistor to ground - pin 11 of GTIA. In that example, you could cut the wiring to pin 11 and not remove any of the connection points from the circuit except pin 11. In the 130XE, pin 11 is between the cartridge and the MMU, so you have to restore the wiring from cart. to MMU after cutting out the pin.

1200XL: cut the trace on top of the board just to the left of Q4. MMU is U14.

800XL: cut the trace just below pin 11 on the GTIA chip (U17). MMU is U3

130XE: cut the trace on top of the board just below pin 11 of the GTIA chip (U17). Also cut the trace on the bottom of the board right next to

pin 20 of U17. Add a wire from the pad near the last cut you made (near pin 20 of the GTIA chip) to pin 8 of the MMU chip (U3). This added wire restores the circuit between the cartridge and the MMU.

All machines: the added circuit is 1/4 of a 74HC86, which is an exclusive-or circuit. Wire pins 4,5,7,9,10,12, and 13 to ground. Connect pin 14 to +5v. Pin 1 goes to pin 8 of the MMU and pin 3 to pin 11 of GTIA. Connect a 1/4 watt resistor (1K-30K) from pin 2 to ground. Finally, mount the push button (normally open) switch on a clear area of your case and wire one side to +5v and the other to pin 2 of the '86. That is all that's needed. If you want to restore your machine to normal, solder a wire between pin 11 of GTIA and pin 8 of the MMU and remove the added IC and switch.

Well, it looks like it will take you longer to read this whole thing than it will take to build it. Just take your time and ASK FOR HELP if you aren't sure!!

<Uh,oh.... do I have to open up my computer again??> Yep!! May be a good idea to install MORRAM and FREEZER at the same time and on the same board. (takes two ICs - maybe you should leave a little extra space for.......?)

Justin, this is your lucky day. I posted a textfile on my BBS years ago explaining how to read this (and a few other) controller(s). And wouldn't you know it, I just set up my 8-bit system last week and I now have access to the file. I'll post it here in the newsgroup for everyone to read:

READING THE ATARI TRAK BALL AND DRIVING PADDLES

Both the Atari Trak Ball (in native "Trak Ball mode") and the Atari Driving Paddles have a special characteristic which makes them superior controllers. Not only can you read the direction they are being rotated, but you can also determine the speed they are spinning. I will explain in technical detail how to read each one. You must understand the Binary numbering system and how the computer uses it to follow the examples.

Driving Paddles
------- -------

The Driving Paddles have two physical characteristics which separate them from the standard Paddles:

1) There is only one Driving Paddle per connector.
2) The Driving Paddles have no "end".
(They can spin limitless in either direction)

To read a Driving Paddle, simply read the Joystick register where the Paddle is plugged in. The lower four bits of the register are used (similar to reading a Joystick).

```
b b b b b b b b
7 6 5 4 3 2 1 0
- - - - - - - -
0 0 0 0 1 1 y y
```

Bits b7-b4 are always zero. Bits b3 an b2 will always be 1. Bits b1 and b0 are used to determine the direction and rotation speed. When the Paddle is rotated to the right, b1 and b2 cycle through the following pattern:

yy = 00 10 11 01

When the Paddle is rotated to the left, b1 and b2 cycle through the following pattern:

yy = 00 01 11 10

The speed at which the lowest bits rotate depends on the speed the Paddle is turned. To put it in a decimal example, if a Paddle was plugged into the first controller port, and being rotated to the right, the Basic function STICK(0) would cycle through the values 12, 14, 15, 13.

The button on the Driving Paddle is read with the Joystick button register.

Trak Ball
---- ----

The Atari Trak Ball is a versatile controller in that it can run in its native "Trak Ball mode", as well as emulating a Joystick for compatibility with games not written specifically for a Trak Ball.

Reading a Trak Ball in Joystick emulation mode is identical to reading a Joystick. The lower four bits correspond to the four directions the Joystick may be pushed toward:

```
b b b b b b b b
7 6 5 4 3 2 1 0
- - - - - - - -
0 0 0 0 r l d u
```

Bits b7-b4 are always zero. Bits b0-b3 are set to 1 when the Joystick is centered, and cleared to 0 when the Joystick is pushed (r)ight, (l)eft, (d)own, (u)p or any combination of these directions.

When the Trak Ball is switched to its native mode, the same bits are used, but in a different way:

```
b b b b b b b b
7 6 5 4 3 2 1 0
- - - - - - - -
0 0 0 0 v v h h
m d m d
```

Bit b0 is the horizontal direction bit. When the Ball is spun to the left, b0 is 1. When the Ball is spun to the right, b0 is 0. Bit b1 is the horizontal movement bit. As the ball is spun horizontally (left or right), b1 toggles between 0 an 1. The faster the Ball is spun, the faster b1 toggles.

Bit b2 is the vertical direction bit. When the Ball is spun upwards, b2 is 1. When the Ball is spun downwards, b2 is 0. Bit b3 is the vertical movement bit. As the ball is spun vertically (up or down), b3 toggles between 0 an 1. The faster the Ball is spun, the faster b3 toggles.

Here is the direction information in another format:

Date: 1996-11-05 00:00:00 UTC
From: af332@freenet.hamilton.on.ca
Message-ID: <55m7fe$b61@main.freenet.hamilton.on.ca>
Source record: 78929

Does anyone here have any plans to add a composite video port to the
Atari 400? My original Atari 400 has 48k and a B key, and I would like to
add monitor support.

Willy

I am using APE, and it works very fine, even with copy-protected
software.

BTW, it reads and writes files three times faster than the regular 1050,
and you can create virtual disks up to 16MB in size!! (need Mydos or
Spartados for this feature).

Yes, you can copy from disk to .ATR images and vice-versa (excluding
copy-protected software images - they can only be copied from disk to
.PRO images using APE's ProSystem).

I guess Mr. Steven J. Tucker can tell you more about... ;)

I recommend.

Go to radio shack and get a connector, half RF and half coax...then
you can connect the RF to the 800xl and run the coax directly into
your television....i use this on all of my systems (3) and i have all
of them going into one tv with a multiple coax switch box....the video
quality is EXCELLENT!

go to radio shack and pick up an RF/coax connector...it will allow you
to us a coax cable rather than an RF cable

You can get both Jumpman, Jumpman, Jr. and all three Lode Runners from Yogi's site at ftp3.cyberspy.com. I don't know what the exact status of the copyrights on the 8 bit software is, but the software is no longer being produced.

Since I work at a RadioShack (it's now one word) i can say that we do indeed have the connectors... and the picture quality is improved over using an RF switch-box... If i remeber correctly it's somewhere around $5 or so for the adaptor.

I know that Origin Systems still claim their copyrights
for the earlier Ultima series. This actually got to be
a touchy subject in REC.GAMES.COMPUTER.ULTIMA.DRAGONS.
since everyone started to download Ultima I-V for the
Apple IIe and running them on an emulator. Origin just
released U 1-VI for PC on CD. Origin also released an
official statement about its copyright explaining that
their copyrights are still valid and that there is no
plan to release any titles to the public domain. Blah,
blah, blah...

From what I understand, a copyright lasts for 50 years
after the death of the author, whether an individual or
a corporation. So far, no one seems to be too concerned
to sue anyone yet, at least what I've heard.

It looks that way. I found it on a couple of other groups. At any rate, ignore it unless it comes back. At that point, we can take action.

Oh yeah? My Atari 400 had keys for the entire alphabet. And numbers too.

(Obviously I don't know what a B key is)

Close, but no cigar. You are thinking of the 65XEP, an item I have been chasing down for years. A nice person in the Netherlands send me a quote from Compute (1985), that discussed the 65XEM as a unit with a built in AIME ("Amy") sound chip. I now remember the project.

3631. 5200 joystick/keyboard input

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-05 00:00:00 UTC
From: nickb@primenet.com
Message-ID: <55p74d$deo@nnrp1.news.primenet.com>
Source record: 78944
Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit

I'd like to know what sort of readings to expect from the joystick pots on a 5200. Within what region should I assume the joystick is centered, and what are the minimum and maximum X and Y readings?

I'd really like to try for a two-speed system where halfway between the center and the edge is half-speed, and closer to the edge is full-speed. What bounds should I use for this purpose?

Do I have to set a strobe after I read the pots?

I also want to know how to read the kaypad directly, since I don't plan to be using the 5200 ROM's interrupts, and also, whether I should set any strobes after that, too.

Don't be shy in responding, I'm closer to a finished product than you might think. ;)

It has a monitor? I have this as a switchable OS in my 130XE, and I
never knew there was a monitor in it, I thought it was just an 800
compatibility chip?

> permitting drives to be addressed as D5:-D8:.

These drives, in order to use warp-speed, had to have its disks
formatted in a special "Ultra-speed" sector skew. Unlike the Happy
which would buffer the whole track and warp it to the computer, the
USDoubler had limited ram and relied on the sector to be accessible
right when it needs to be read. Using a ultraskew disk in non-US mode
was REALLY SLOW :) However, the Happy 1050 reads them just fine because
of it's buffering.

> 1Meg of RAM, two RS232 ports, a parallel printer port and

> a SCSI hard drive port.

The to connect it to a 130XE ECI required a special adapter that would convert the 130xe's cartridge/ECI to an 800XL compatible PBI. the little board had two cartridge slots (the rear of the two works for some cartrige types only, like Rtime 8) This looked better than having a tower of stackable cartriges coming out of your 800XL! (Spartados X, Rtime8, and Action all plugged on top of each other is rather obtrusive on an 800XL :)

The MIO's Ram could be used as a Hard-drive cache (a software jewel I've found recently, works great for BBS's!), Printer buffer, or Ramdisk(s). You can even sector copy a boot disk to the ram disk and boot from it! Nothing like seeing that 1-and-a-half-minute-to-load boot in 2 seconds flat!!! You can specify how much ram is used for each component.

Also, the MIO had only 1 RS-232 serial port. However, it was capable of 19200bps, beating the P:R: connection and 850 which were limited by the SIO bus to 9600bps. There were apparently 2 versions of the ROM on it, I have version 1.1 in a 1meg mio, a friend of mine as 1.1 in a 256K mio, but I've heard talk in here a while back of someone having 2.0 or something.

I've just picked one of these babies up and BOYYY is it SLOWWW!! It's deja vu of Atari 810!!! However, With SpartaDOS, I've connected a 720K Disk drive to it and it works! (just very slow..)

The only thing not shared by the network is the R: device, allowing the system to be used for running a multi-line BBS with BBS Express! Professional BBS software from K-Products, and is still actively supported. This was possible with a special version of 4.0, and is built into 5.0.

3634. Modifications to the OS

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-05 00:00:00 UTC
From: ryang@computerhelp.ca
Message-ID: <19961105222614561474@vanc01m01-46.bctel.ca>
Source record: 78947

I would like to make some simple modifications to the operating system in my 130XE. I have experience with burning new operating systems into EEPROMS because I've upgraded my 130XE to 4 OS's, switchable... In the process I blew my original OS, and copied the OS chip of another 130XE onto another EEPROM :)

When I have an image of the XE OS created by the EEPROM reader, can I just do simple sector editing on the file to apply the changes I want? Basically Default screen colour, key repeat, no IO sound, Left Margin 0, and possibly modifications to the character sets. I read somewhere that the OS does a checksum verify when the computer boots, and if it doesnt match, you get the self-test.

Any help would be greatly appreciated. I have written a small program in ML using Atari Assembler editor cart that does these changes (7 bytes!, compared to my 8K compiled basic program that did the same thing :) I'm not the greatest with ML (my heart is with basic) but I can to the basics like LDA, STA, INA.

Hmm.. thinking about it, it would be cool to put a 4K binary load game in the unused OSROM :) maybe that would be my new self-test screen!! First things first :)

I've been an active Classic atarian since almost day one of the
computers, and I must say I've NEVER heard of those systems! Michael
Current should add those to the FAQ!

S-100 Bus... Was that not what the Altair used?

Didn't some of the chips that were supposed to end up in a souped up
generation of 8-bit computers wind up in the 7800 game system? I
remember reading somewhere that the 7800 could display 256 sprites
without resorting to interrupts or similar chicanery. I do know the
games for it looked a damn sight better that the original 2600 titles
and they often exceeded 400/800/XL/XE titles in appearance. The 7800
Asteroids and Xevious were VERY good and Tower Toppler had INCREDIBLE
graphics. I would have loved the chance to play with that hardware
in a personal computer form.......

Help! I need a modem program that will work on the Atari SX212 modem hooked up to my 800xl through the standard Atari I/O port. Someone recently sent me a variety of programs, but I can't get any of them to work. An 850 modem handler was also included, but I suspect it may not be loading correctly.

Does anyone have a modme program they know will work on an SX212? I will gladly supply a disk and mailer if you can send me one.

Please answer via email

| an Atari 800-D (Developers Bus System)
| several Atari 2600 developer S-100 bus cards
| and the only 2 known to exist Atari STylus STpenOS touch pads
|
|
Do you have any facilities to digitize pics of these and upload them to
an ftp site?
-
How about a brief rundown on each (especially the 1600XL prototype, which
I do not recall hearing of before). The STylus is likely the only item
most folks have even seen pictures of. As to the 800XL-F, is this simply
an 800XL with a built-in floppy drive (a 3.5", I assume)?

>Thanks,
>David Falcon

David,
One way I use frequently is to use a null-modem cable and a
communications program on both the PC and Atari. Both must be able to
use the same transfer protocol, such as Y-Modem Batch. Bobterm is good
for this on the Atari side. You must have a real RS232 port available
on the Atari (such as that on an Atari 850 interface, ICD's P:R:
Connection, MI/O or CSS Black Box). If you don't have one of these,
Move the files into .ATR/.XFD images for the emulator (I'll e-mail you
a copy of IMU to aid in this process) Then use SIO2PC and the
SIO2PC/APE cable to move the image data to your Atari. I personnally
like the former better, but either should work. Another thought is to
find a friend that has such a setup (if you don't) and do either
process on their system.

That's true.

This is what I do in XL-it! to disable the checksum-verify:

```
/* Disable ROM-CRC */
osrom[0xff86-0xc000]=0x18; /* CLC */
osrom[0xff87-0xc000]=0x60; /* RTS */
```

I hope this helps.

From: ejh7678@isc.rit.edu
Message-ID: <55qd97$6tr@news.isc.rit.edu>
Source record: 78958

Greetings, atari folks,

I am a student at RIT currently in a computer artch. and organization class. Now, for %40 percent of our grade, we have to compile a paper describeing the orginzation of a comercial computer. Now, while everyone else in the class was declairing that they were going to do aptiva's and pentiums and compacts, ect, ect. I boldly stood up and announced I was going to do the atari 800XL. Naturally this shocked the herd of technogeeks in the class into silence, and set me up for an ordeal.

Now, I was wondering if the combined resources of you 8bit wizards could hlp me find sources of information, or could answere the questions here, my main concerns are:

what is the orginzation of the CPU? does it have multiple excucation units, does it have a long pipeline?..ect

What is the orginzation of the computers main memory? what type of memory? how much can be used by the cpu? how fast is it?

What is the orginzation of the computers secondary memory (storage) what type of interface? storage? throuput?

what type of bus?

Come on people, help me out here. Give the atari one last wheeze of breath. :) once my paper is finished and turned in, I also hope to release it to the web as sort of a secondary FAQ extension.

Also any sites our resources are greatly helpful.

3648. WTT: Atari 2600 & carts for other Atari HW

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-06 00:00:00 UTC
From: dras@rasmussen.telco.stratus.com
Message-ID: <jlobudaaomy.fsf@rasmussen.telco.stratus.com>
Source record: 78960
Cross-posted to: rec.games.video.atari,comp.sys.atari.8bit

Hi,

I have the following that I would like to trade:
(warning: use fixed width fonts)

1 Working Atarit 2600 w/2 joysticks and these carts...

Mattel: Atari:
Super Challenget Footbal, Pole Position (2)
Kool-Aid man Yars Revenge
ET (2)
Parker Bros: Vidoe Olympics
Qbert Casino
Frogger Pac Man
Sky Skipper Jungle Hunt
Video Pinball
Sears: Star Raiders
Arcade Pinball Ms Pacman
Night Driver Kangaroo
Space Invaders Galaxian
Maze Craze
Imagic: Dodge em
Fathom Combat (2)
Riddle of the Sphinx Asteroids
Dragonfire

20th Century Fox: Activision:
Worm War I Freeway
Keystone Kapers
Coleco: Decathalon
Donkey Kong Mage Mania
Kaboom
Sega: Pitfall (2)
Congo Bongo

All the carts are used and untested (I did try a couple of them
and they worked fine). Most show what looks to me like typical
ware. Most of the Activision carts look pretty beat.

What I want: One of these Atari machines in good working order:
400, 800, 800XL, 600XL, 1200XL, 65XE, 130XE,
or the XEGS (XE game system).

Plese send offers to dras@sw.stratus.com

Thanks very much.

Dan R.

3649. computer/tv cable for 800xl

I think there's some confusion here. No "pin-outs" are needed, because the RF output on the computer is just that one hole in the back that accepts a standard RCA type patch cable. There's no need to involve the port for a monitor cable when using the old switch box. It wouldn't even work that way.
BUT..... if the TV involved does have direct video and audio inputs, you should think about getting a monitor cable and do the old "direct connect". Much improved video quality with this method. The Radio Shacks around here stopped carrying them in stock a while back, but B&C Computervisions still has them, I think. They're at 408-986-9960.

I don't know if you really *finish* that one, unless you just retire
at an old age (like in 1540?). I've played into the 1520s several
times, winding up with fleets of 400 ships, 1200 men, and a lot of gold
in reserve. It's amazing what some Incas will give you for those
el cheapo European trinkets...

I can't see any major busts happening in the peddling of obsolete
"warez" which are not commercially available.

I don't really condone software piracy--after all, I write software
for a living--but if a publisher was going to damages for copyright
infringement, what actual damages would there be? If the work
is no longer produced, and no longer for sale...the publisher has no
"real world" financial loss from the piracy. There could be the
matter of punitive damages apart from actual damages, but I doubt
that many juries would look at someone who owned a legit copy of a
game which he/she owned, and who downloaded a pirated "cracked" copy
of that software for backup purposes, and order them to pay anything
at all.

The fact that the disk is physically copy protected, and therefore
not conducive to legitimate backups for archival purposes, suggests
to me that there is little chance, legally, that those who do have
the "cracked" versions of physically copy protected software would
be prosecuted, much less found guilty and ordered to pay out the nose.

With software that has no physical copy protection, it's another story.
There, duplication and distribution is clearly piracy. But again,
if the software involved is no longer for sale anywhere (in a form
where the publisher/author would collect royalties), it's just not
worth their time...they are far more concerned with keeping their lawyers
after those who copy more current, commercially available software
for more contemporary systems.

At worst, pirating games lo longer available is akin to stealing a
5-cent stick of bubble gum at 7-Eleven. Not the right thing to do,
but hardly a major sin and not one which those impacted are going
to waste their time prosecuting.

If you're Origin, for example, are you really going to spend legal
resources busting someone posting ATR's of Ultima III when you have
people pirating your *current* software which sells for 50 bucks off
the shelf? They would be *incredibly* stupid if they did. And you
don't become successful in business by being stupid (with a few rare

exceptions).

Actually, it's easy to do with some on-line newsreaders. If you're
someone who pays by the minute/hour and downloads stuff, don't know
how it works.

I, for example, use YA-Newswatcher for the Macintosh as my standard
news reader. It has very powerful killfile capabilities. I can (and
do) specify the KILL for anything crossposted to at least four groups.
There's a preference setting for just about any aspect of the header
for any level of the newsgroup hierarchy.

For example, if I don't want to hear a lot of OS flame wars, I would
place "*.advocacy" on the Newsgroups line in the "filter" at the
"comp." level. That kills *any* article crossposted into an advocacy
newsgroup, anywhere within the "comp.*" hierarchy. It's *very* cool.

You can killfile morons, tired threads, crossposts (using regular
expressions you can specify your tolerance as to *how many* crossposted
newsgroups are too many, as I said my maximum is 3), old articles,
and just about any other line in the header. You'd be amazed at
how many times it reports 200 new articles in a newsgroup, only to be
left with 25 after the noise is filtered out...

As to the "HOT COLLEGE BI-MALES," I'd like to see how well these
images would display on my 800XL. :)

>around here stopped carrying them in stock a while back, but B&C
>Computervisions still has them, I think. They're at 408-986-9960.

Right. My advice for the best quality picture would be to get the
monitor cable from someplace like B & C or Toad Computers (their
number is 1-800-448-8623) and hook it up to an RGB monitor (like
the old Magnavox or Amiga 1080/1084 models...I've seen the 1080's
go for $50-60 over in comp.sys.amiga.marketplace!) Also, you can
hook your VCR into the 1080 for dual entertainment! Have fun! :)

Was your chip a standard part? I have a TONG revision MB with a custom
ASIC for the Voice Synthesizer in a gold and ceramic 40-pin package. I
was told by Bruce at B&C that the TONG revision MB's speech chip was not
compatible with the prototype version (the 1450XLD with the add-on
disk controller).

> - Had two Epson made double-sided, double-density disk drives. Both drives
> worked. They were mounted in the case and had a piece of sheet metal molded

Almost word-for-word descrtiption of mine, but on mine the screw heads are
poking out, sitting on little washers.
>
> - The voice synthesizer didn't work on this machine. I don't know if the
> SSI-263 chip was bad or if the two prototype 40 pin chips were bad. These

> the chip package.
>

Hmmm...I was under the impression that one of those was the speech chip.
Our 1450XLD's must be near-identical.

Here is the lis of 40-pin IC's on mine:
U25 C014795 6520
U26 C012294 POKEY
U39 CO14806 6502C (Sally)
U40 CO12296 ANTIC
U41 CO14805 GTIA
U45 CO61922 FREDDIE
U44 Prototype "B"
U43 Protytype "C"
U16 Intel 8040 (modem???)
U19 WD2797 Disk Controller

> - There was a small breadboarding area on the board for the engineers to add
> any additional circuits.
> - There was a area for a 48 pin chip. This spot I was told was for a

Same.

Did yours have an additional IC? I have run them all down and I can only assume by default that one of the two prototype ASICs must be revision 2 of the speech chip. This is the version that the TONG boards are supposed to have, and it is incompatible with that used on the pre-TONG machines.

Does that sound right to you?

Cross-posted to: alt.games.video.classic,comp.sys.atari.8bit,comp.sys.computers.marketplace,rec.games.video.classic,rec.games.video.marketplace

I have the following Atari items for sale (or trade), all are clean and in working condition with accessories as specified. All offers to buy or trade hardware and cartridges will take priority over offers for just the cartridges alone.

Hardware
-Atari 800XL With Power Supply, RF Cable
-Atari 600XL With Power Supply, RF Cable
-Atari 130XE With Power Supply
-Atari 1050 Disk Drive With Power Supply and connection cable
-Atari 1050 Disk Drive Without Power Supply
-Atari XF551 Disk Drive With Power Supply and connection cable
-Indus GT Disk Drive Without Power Supply and connection cable
-Atari XMM801 Printer With manual and Atari Writer Plus (unit has built-in power supply)
-Atari 520 ST Missing all accesories
-Atari XL/XE Paddles
-2x Suncom Tac Controllers

Cartridges
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Miner 2049er
Missle Command
Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football
Robotron: 2084
Star Raiders
Tennis

Books and Manuals
-Atari 800XL Manual and conection guide
-Atari 1050 Manual

-Consumer's Guide "The Users Guide to the Atari"
-Compute's "Third book of Atari"
-Compute's "The Atari Basic Source Book"

If you are interested in any of these items, please make me a offer in US funds (buyer pays shipping), as far as trades go, I am interested in the following types of items...

Intellivision - Rare Hardware and cartridges, Shrink-wrapped cartridges, Bilingual boxes released in South America
Vectrex - Hardware and cartridges, on screen Multicart(s)
Atari Lynx - Hardware and cartridges
Mattel Electronics - Handhelds (especially Backgammon and Spead Freak), Aquarius computer items, etc.
Coleco - Handhelds, Total Control 4 carts, tabletops, as well as some ColecoVision items
Microvision - Hardware and cartridges

B-Key was an add-on full stroke keyboard for the 400. Once you've attacked
the original 400 keyboard, even the xe keyboard is an improvement.

Not true. The SX212 has BOTH SIO and RS232 ports, thereby making it
useful for both 8-bit and ST users. I had one, and it served me well
for several years on both machines.

The XM301 and SX212 were both popular modems in their day (circa 1987);
they are not considered rare.

: Oh yeah? My Atari 400 had keys for the entire alphabet. And numbers too.

: (Obviously I don't know what a B key is)

A "B-Key" was a replacement keyboard made by a local company, Inhome Software.
They used to come to our Users Group the H.B.O.A.U.G. (Hamilton, Burlington,
Oakville).....we were H.B.O. before there was a "Home Box Office"....we should
have sued em! Anyhow, this keyboard was a full stroke replacement, but they
were very low keys....the touch was OK, but not excellent. There were
better keyboard replacements for the 400, but NONE of them fit as well, or
looked as if they were part of the orginal Atari 400. I remember seeing
one which sat right on top of the old membrane keypad. It was something like
4 inches above where one would normally keep their hands while "typing" on
the Atari 400.....kinda clumsy looking. The B key was great. I sent
one to Holland on an upgraded 400. Marius Diepenhorst bought it.

There was also a midi interface made by Wizztronics, called the MidiMax. Unlike the MidiMate, it had not jacks for external sync, but it did have an additional SIO port so it could be chained. It contained the same optoisolators generally used in midi keyboards, and the case was riveted steel -- real rugged. It came with Lee Actor's MMS software, some sample songs, a program to convert AMS to MMS files, and a couple of six foot midi cables. Gary Levenberg wrote the manual for the software. In addition, Wizztronics sold a dozen or so double-sided disks of MMS songs that had been converted from AMS.

I have this interface and I use it quite often to demonstrate what an 8-bit can do. The interface will work with MidiMate software as well as the MMS software.

Bob, that is sad news indeed.

We on Long Island lost Alex Pignato just a few short months ago, and we know what the loss of someone of Jim's stature can be.

Although I've never met Jim, I know of the dedication he showed to the community through reading the SLCC Journals over the years. His willingness to pick up AC after Ben Poehland had to give it up was another result of that dedication.

I've spoken to both Jack Gedalius, president of The Ol' hackers Atari User Group and Pat Mulvey, president of the Long Island Atari User group, and both have asked me to please ask you to express the sincere condolences of these groups to Jim's family.

Thanks.

Can anyone tell me what kind of power supply is required for an Indus GT disk drive? I recently acquired one and tried to use the standard 400/800/810/1050 power supply on it - it looked alive for about 3 seconds and then died. I'm afraid I may have done some real damage if I used the wrong power supply. Does anyone have any ideas or suggestions (regarding both the proper power supply and what I might have killed in the drive?).
Thanks,

11.5 Volts AC output, same as a Atari 5200. Atari Part # C018187.
On the main board of the Indus there are two voltage regulators. Replace them.
Hopefully that's all that blew out. I picked up an Indus about 6 years ago that
someone had done the same thing and that's all that was wrong with it.

Good Luck; Rich Mier

If you're in the midwestern USA and looking to buy, sell or trade
anything Atari, be sure and come to:

S W A P F E S T '9 6

presented by
the Atari Computer Enthusiasts of Columbus

Columbus, Ohio U.S.A.
Saturday, Nov 9 1996
1:00pm - 4:00pm

Location: Chemical Abstracts, on Olentangy River Rd
at the corner of Ackerman and Dodridge

Admission is only $2, plus $3 if you sell more than $30 worth of stuff.

See you there!

-Tony R.

(to those outside of the midwestern US: sorry about the bandwidth but my
crap newsreader can't set distribution limits)

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the
Atari 8-bit family of computers. These include the 400, 800, 1200XL, 600XL,
800XL, 65XE, 130XE, and the XE Game System.

Users of comp.sys.atari.8bit actively maintain the following four Periodic
Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current
-------------------------------------------------------------------
This posting contains a list of Frequently Asked Questions (and their answers)
about Atari 8-bit computers.
Regularly posted to comp.sys.atari.8bit comp.answers and news.answers

I just bought an Atari 800XL with Pacman from the Internet today!

I am filled with glee!

Anyone know where I can find a nice cheap copy of Ms. Pacman Cart?

The B Key was an add-on/replacement keyboard that gave you real keys. It was one of two companies that made such a thing (I have one from the other company). My system is much like the one that Bill Moeller described above. I never bothered to upgrade my video either.

3679. Old Digest Replies

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-08 00:00:00 UTC
From: t.andrews16@genie.com
Message-ID: <199611122221.WAA08452@relay1.geis.com>
Source record: 78769

I've just downloaded some Info-8 Digests from Genie and decided to reply to some of the messages I found there. These Digests are a good month behind, and I'm replying to several, so please bear with me if parts of my message are no longer timely. I don't remember many of the names of the people I'm replying to, and there are too many of these digests to go back through to find them, so I'll use a short description instead. I'm subscribing to the Digest myself tonight, so with any luck any future replies I might make will be more current.

To the person with a couple of chapters to a "manual": You have portions of the infamous "De Re Atari" in your posession. While it was written for the 400/800 OS, most of it is still valid for the XL/XE systems. As for where you can get a complete copy, I can't help much there, not being current on such things. Hope this, at least, helps.

To the person urging me to "get a life": I have one, thank you very much, and it suits me, for now. This may come as a shock to you, but my life doesn't require the approval of you or anybody else. Only my own approval is necessary. If I ever manage to fully explore the capabilities of my chosen platform (no one has done it yet, to my knowledge), I'll consider your suggestion.

To the people discussing an XE that only shows the Self-Test with bad RAM: Last spring a friend of mine gave me a stock 130XE with the same problem, except that only a few RAM blocks show as bad. I asked around about it, and received different diagnoses. This, however, begins to make sense. I know the 400/800 powerup sequence includes a zeroing of RAM and a check for the amount present. Am I to understand that the XE OS does much the same thing and jumps to the Memory Test if it finds bad RAM? It sure sounds like it.

I have 16 64k chips that were pulled from 2 800XLs when I did Rambo upgrades on them. They worked when I took them out, and I have no reason to think they don't now. (The XLs were both socketted) Any reason why I couldn't replace the chips in the XE with these and get it going again? I'd really like to install sockets if there's room, too.

To Bob Wooley: Good to hear AC is still alive. I was beginning to wonder a bit. Judging by the date of the message, and if my calculations are correct, the latest AC should be out any minute now. I'll be watching my mailbox. If it comes soon, I might even consider renewing my subscription...

To Ian Chadwick and Bill Wilkinson: Good to see you guys are still around, even if the 8-bit is no longer your machine-of-choice. Ian, like most serious Atarians, my copy of Mapping the Atari is the most-used 8-bit

reference I have. I saw the serialization of Robin Sherer's Memory Map in Analog, and it was ok, but I like your book better. Bill, I was sorry to see Compute! drop all Atari 8-bit coverage, and even sorrier that your Insight: Atari column ended with an April Fool joke. They could have at least given you some warning so you could say goodbye properly.

To the Alchemist: I'm glad to see you still have some interest in the 8-bit, even though you've moved on to another platform. That was not the sense I got from our last email exchange, back in May. We need to keep hearing your irrascible comments lest we start to revere our machines too much. Pray do not desert us.

To the guy with the Okidata 82 ribbons for sale: These ribbons will also work with the Atari 1025 and Star Gemini printers. I used each one of them for years. The 1025 was essentially an Oki 82 modified for direct connection to the Atari. The last time I looked, though, the ribbons were about $1.50 at Office Max, and less than $1.00 each from American Ribbon Co. of Ft. Lauderdale, FL. (Shipping extra, of course.)

Tom Andrews The 8-bit Farmer

Hmmm... This reply didn't get through like it was supposed to the first time. I'll try again. However, my subscription to the digest DID get through, and I have my first one. Things will indeed be more timely from now on.

3684. Looking for Atari DOS 1.0

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-08 00:00:00 UTC
From: ernest@pi.net
Message-ID: <328302e2.2536885@news.pi.net>
Source record: 78846

Is there anyone who has a copy of Atari DOS 1.0?
I have all the other DOS's that Atari made (I think) but this one
seems to be so old, that nobody has it anymore. If possible, I would
like to get an original master disk, but at this point, a copy will do
just as well. Is there anyone here that ever actually used it?
Or do you know someone who might have it in the attic?
We would like to add it to our pooldisk CD-rom.

3685. Re: Indus GT drive questions

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-08 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <55v7u1$t7j@login.freenet.columbus.oh.us>
Source record: 78847

Janice in NYC (Sapphire@innonyc.com) wrote:
: Hi, I just recently acquired an Indus GT disk drive, but I have a few
: questions, I didn't get the Dos XL manual, I'm wondering how the
: Syncromesh thing is supposed to work. It's supposed to speed up disk
: access, and when I boot Dos XL, it executes a line GTSYNC ON, but
: subsequent disk access doesn't seem to be any faster (it just makes a
: different sound when reading sectors).
: I figured that maybe it would need a special disk format, so I tried
: formatting a double density disk with the syncromash on, but disk
: speeds still seem normal.
: Does anybody have any idea what's going on?

Yes,you need a special format.Doesn't the format command have a option for
Synchromesh?

: Also, since the GTSYNC requires a command line parameter to activate,
: I can't use it with a regular DOS like Mydos or Atari Dos, are there
: any device drivers I can download to activate the Syncromesh with
: these operating systems (I don't really plan on using DOS XL, it seems
: rather poorly designed to me, I mean, come on, the command for copying
: files isn't even built-in to the command processor?)?

I've never seen a driver for Synchromesh.But SpartaDOS X re-programmes the
drive for ultra-speed.But (aparently) only SDX can take advantage of this.
(Ultra-Speed increases the baud rate of the disk drive from 19200 to 53200)

: Anothe rthing. Inside the drive enclosure, on the main circuit board
: (beneath the bare drive), are two pin-type connectors on the edge of
: the circuit board that aren't connected to anything, one is a big
: double-row connector (like 40 pins total or something), and the other
: is a singel row of five pins, does anybody know what are these
: connectors used for?

That 64k upgrade would've been nice for implementing DOS with-in the disk
drive like Commodore does.(and with many disk buffers!)

: Lastly, can this drive backup my protected disks
with the
right : software, or would it need some sort of upgrade like for the 1050s
: (tho I've not seen any for the Indus GT)? I mean, I figure since it's
: got a Z80A processor and all, it must be intelligent or
: something......

I don't know.All Atari drives are "intelligent",you can just upload Z80
programmes into the drive controller memory to change the drive's
behaviour with the INDUS GT and Happys (and others?).

I know that's how the Happy drives were "modified" to read PC disks.
The uploaded controll-programme actually added extra SIO commands to
access MS-DOS sectors.

Brad Rogers (brad@pianosa.demon.co.uk) wrote:
: Whilst reading the usual rubbish I find here, The Hurdy Gurdy Man wrote
: something interesting to All about Two Atari 800 questions.:

: Hello The,

: THG> Ok, I lied, here's a third question. What the hell was the right
: THG> cartridge slot for? What did it actually do from you, technically

: It was originally intended for use with stuff that couldn't be put in a 8k
: cart. Then somebody "discovered" bank switching, so effectively making it
: redundant.

huh?!?
16k is the limit before you have to go to bank-switching,not 8.
The right cartridge port is useful for making upgrades to other people's
programming languages.

: There are one or two carts that need to be placed in the right slot, though.
: One of them was called Monkey Wrench II, which allowed the user to access a
: basic monitor, and added one or two hacks to the Atari's OS. Funnily enough,
: I've just completed negotiations for the sale of MWII.

There's also the R-Time8 cartridge.

I have a couple on floppy. I have to get a bit of time to copy them to
the PC so I can u/l them/e-mail them to various sites and users. One I
have is very small and has been around since 1980. Works great! It is a
little autorun.sys file that reads the directory, looking for .exe
files, then presents them in a list with letter choices to run them. As
soon as I get it/them copied I'll e-mail them to Bill Kendrick and Yogi
to post in their respective file sites. In the mean time, e-mail me if
you need a copy of one or more of these loaders.

>Please check out the site (listed below in my sig) and participate.

Er, don't take this the wrong way, but I think some people may have
been turned off by the way the site is set up, i.e. everyth9ing is
inline graphics and there isn't any way to comprehensibly view the
site with a text-only browser or with a graphical browser with
graphics turned off.
At least, that was my situation, and unfortuantely I'm on a dial-up
connection and it was just taking too long to load the images so I
never really got to take a good look at the site.

Just my 2 cents......

dklugh@freenet.columbus.oh.us (Daniel Klugh) wrote:

>Yes,you need a special format.Doesn't the format command have a option for
>Synchromesh?

Yes, I finally managed to get Syncromash to work. The driver needs to
be loaded with the ON command (GTSYNC ON) and then either one of hte
format programmes (depending on single or double density) used to
format the disks, the disks would then be in Syncromash format and
disk access is about twice as fast.
Unfortunately, it's pretty much useful only for non-booting data disks
since Syncromesh needds to be activated after loading DOS XL and
accessing a Syncromesh disk with Syncromesh deactivated takes about
twice as long as accessing a regular formatted disk. :(

I can't imagine why they didn't just make Syncromesh a hardware thing
on the drives, so that the drive could boot Syncromesh disks without
having to load DOS and a device driver first. Can't US Doubler drives
boot skewed sector disks without loading a driver first, or is it the
same as the Indus GT?

>I've never seen a driver for Synchromesh.But SpartaDOS X re-programmes the
>drive for ultra-speed.But (aparently) only SDX can take advantage of this.
>(Ultra-Speed increases the baud rate of the disk drive from 19200 to 53200)

Well, one of the reasons the Syncromesjh driver from DOS XL won't work
with regular DOS's (Spartados excepted) is that it needs to have a
command line parameter given to enable it (GTSYHNC ON), so altho the
programme actually runs under other DOS's, it never activates teh
Syncro cos it never gets the ON command. I tried the driver with
Sparatados 3.2g (since it's a command-line DOS), but it crashes the
computer.

>I don't know.All Atari drives are "intelligent",you can just upload Z80
>programmes into the drive controller memory to change the drive's
>behaviour with the INDUS GT and Happys (and others?).

Are you aware of any programmes or techniques to allow uploading to
the drive's CPU?

>I know that's how the Happy drives were "modified" to read PC disks.
>The uploaded controll-programme actually added extra SIO commands to
>access MS-DOS sectors.

I wonder if this would work on the Indus GT, too.

As I recall, one of the advantages of the Commodore disk drives was
their flexibilty, they could easily be programmed to read other
formats and even copy protected disks (I think).......

A real 1450XLD (the one from Atari) had no screws sticking out... There
were internal brackets that held the two drives in place. Bob Brodie has
one that is like that. Mine have holes in the case on one and clean on
the other (but, I don't have brackets for either).

They look like big PALs to me. I doubt that Atari would have done an ASIC
at that point in time - mine are not sealed either....

Now I'm confused....you'r etalking about making copies of the original
protected program disk? It can be done with the .PRO (ape) format
also, but the Mule .ATR in Yogi's archive is cracked I believe so you
don't have to worry about protection.....

I have waited a while to check out the site because of his
constantly promoting how JavaScript is required in some sections...

I finally checked it out, and boy was I unimpressed... Frames don't do anything
for me, even though I use the latest version of lynx, which can "understand" them.

I didn't turn away from the page right away just because of frames, I plunged
ahead... wow, even if I was using netscape here at work (which I do at lunch), I still
would be annoyed because of the large number of graphics... my work shares a 56k
line for the whole building, and graphics are slow.

Blackat, have you ever heard of ALT tags? They really take only a minute or two longer,
and go a long way towards making your site more accessible. When people leave them
out, it only smacks of laziness and/or arrogance to me.

I would think that a page devoted to the 8bit, would at least be accessible to someone
running a terminal program and using lynx.

Yes, that's exactly what I mean! If somebody registers my name with
Chris Lam for a _unique_ copy of Rainbow, that's worth $23 in trade for
my stuff.

From what I've seen in the demo version, Chris has done a great job on
Rainbow. If only I knew what it _sounds_ like, before I get a registered
copy. I'm craving a perfect Atari 8-bit emulator!

Yes, you can modify the ROM image directly. To make life easier, I wrote a program to deal with this. I would write new ROM code in MAC/65 and assemble it at the appropriate ROM address. Then I would run my Action! based program which figures out where in the ROM image to place the new code.

And yes, you are correct that the OS performs a checksum and dumps you into the Memory section of the Self-Test if that checksum does not match. You can recalculate the checksums and change them, or you can simply NOP a couple bytes in the OS to disable the checksum routine.

> I have experience with burning new operating systems into
> EEPROMS because I've upgraded my 130XE to 4 OS's, switchable.

What method are you using to switch between OSs? I'm in the process of building an electronic circuit that might interest you.

> shakes the ground.

It's not an error, rather the game was incomplete. And it's not Montezuma's Revenge II -- it's Robert Jaeger's original (I guess work-in-progress). The commercial version is watered down version that Parker Bros. released.

However, there is a trick to that level that lets you get some extra points. I haven't played the game in a long time, but if I recall, it has something to do with standing on far right in the middle tier. When you jump to left, you appear in your inventory section. You can grab more swords, etc. Then jump back to the right. Just don't get extra keys or torches, because you don't need it and it wastes space since you can't get rid of it. Obtaining the extra swords lets you kill off everything else in the game that you may have missed. It's a tedious process having to go back and forth like that, but fun for the high scores. I used to get over 100,000+ points from this.

B> Nice anti-spam setup there... what do you use to do it?

A piece of software called NetGate. One of the keywords is ANTISPAM, which
searches the newsgroups line. It takes a number as a parameter, so you can
choose what level of cross-posting you will tolerate. Any article that exceeds
the limit, doesn't get transferred to my machine.

As this software runs on an Amiga, & not PC, not only is it off-topic here, but
is of little use to you. Unless, of course, you run an Amiga. :-)

: Thanks,
: _/InfoMan_

There's a schematic for building a 5200 power supply in the 8-bit FAQ (it's for the four-controller version that routed the power down the RF cable).

The 7800 takes a little work, but it's pretty easy. Just get a 9-volt power supply from Radio Shack or a similar place. (The original is 9V, 1A; but anything close like 800mA should do fine.) Then you'll need to solder a connector to the two power pins on the 7800--I think Radio Shack calls it a coax connector or something along those lines. Whatever it's called, it fits the plug on the PS...

Oh, you can tell the polarity of the pins by looking at the circuit board. A couple sections of foil are labeled + and -.

Actually someone E-Mailed me and informed me about them... =) That was one
attribute to the IMG tag i had forgotten tatally about... the ALT='bla bla'
tags will be added...

> I would think that a page devoted to the 8bit, would at least be
accessible to someone
> running a terminal program and using lynx.

It will be soon... right now I am working on a really neat JavaScript based
atari console type thingy... (it's only local on my HDD now... but will
hopefully be online sometime soon... possibly at the same time as the
text-based pages)

Hmm.. I did not realize just how limited some ppl were with their access to the internet... I *DO* test the pages online from the server to me... I seem to get the pages quite quickly on my 28.8/33.6kps connection... but if there seem to be problems I will see what I can do to make a text-only based version...

3715. Atari Emulation on Windows PC

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-09 00:00:00 UTC
From: "Gregory A. Lovekamp" <genius@eosinc.com>
Message-ID: <01bbcdf8$b63daf60$676c1dce@genius>
Source record: 78778

I have an old Atari 800, an Atari 1200, and an IndusGT disk drive. I don't have an 850 interface. I have one of the emulators on my Windows PC (don't remember which one right now).

My question is: How do I get the Atari files from this machine transferred to my PC to run under emulation? I have read about a cable from Atari SIO to IBM 9 pin serial. How do I make one? Where do I get the software for each end?

Thanks for any help anyone can provide.

Message-ID: <3284B959.1F103F19@donet.com>
Source record: 78779

Hi all,

I have created a new system for storing knowledge about anything and
EVERYTHING.

The database is publicly accessible via the WEB. Anyone can add
topics/subtopics/messages/notes ...

Give it a try(please), and ADD some information on ATARI 8bits(or
whatever else).

http://www.donet.com/cgi-bin/dmahurin/notes2html

There is also a search utility.
The database is not that big now, but it should start to grow once
people use it.

```
All Together Now - Huge classic video game auction

Over 1000 cartridges and 50 pieces of hardware!

Everything must go - In one LARGE bunch
--------------------------------------------------------------------------------

I have enjoyed collecting classics over the past 6 years, but now it is
time to move on. I am moving early next year and expect it to be into a
small place. So I will not have room for this collection. I now hope to
pass it onto another collector who can enjoy it.

I am selling everything below together in one large group. Bidding is open
now through January 1st, 1997. Updates and the current bids can be found
at:
http://www.iquest.net/~jscott/alltogether.html or by requesting regular
e-mail updates from me, jscott@iquest.net.

This collection is a great way to start collecting if you are just
thinking about getting started. Or, it is a great way to bump up your
collection and give you a bunch of traders or items for an auction.

This collection includes hundreds of items, so I can not list each item
individually. The collection is made up of the following:

Used cartridges (unique for each system - no duplicates)
--------------------------------------------------------------------------------

- My collection gathered over the past 6 years and a few things I had left
from when these systems were new. There are quite a few common carts
(most of them I would guess) but with 359 Atari 2660 carts, they can't all
be common.

Atari 2600 ------------------- 359
Atari 5200 ------------------- 63
Atari 7800 ------------------- 50
Atari 400/800/XL/XE Computers 38
Arcadia 2001 ----------------- 8
Colecovision ----------------- 77
Intellivision ---------------- 100
Vectrex ---------------------- 4
Super Nintendo --------------- 6
---------------------------------
Total 705
```

Used Duplicates - (May be duplicates for each system)

- While there are quite a few common carts, there are also some not so common ones in these duplicates.

Atari 2600 ------------------- 171
Atari 5200 ------------------- 22
Atari 7800 ------------------- 8
Colecovision ----------------- 11
Intellivision ---------------- 35
Atari 400/800/XL/XE Computers 14
Misc others

Total 261

New / Like new boxed cartridges (May be duplicates for each system)

Atari 2600 ------------------ 54
Atari 5200 ------------------ 4
Atari 7800 ------------------ 41
Atari 400/800/XL/XE Computers 4
Lynx ------------------------ 1

Total 104

Used Hardware

- At least one of each system was in working condition recently, others probably do work, but may not.

Arcadia 2001 - 1
Atari 2600 - 4
Atari 5200 - 3
Atari 7800 - 1
Atari 800 - 1
Atari Floppy Drive - 2
Atari Tape Drive - 1
Atari XEGS - 1
Colecovision - 3
Commodore 64 - 2
Commodore Floppy Drive - 2
Intellivision - 1
Intellivision II - 1
Misc. Controllers - A bunch!
Misc. Power Supplies - A bunch!
Monitors: Commodore 1702, 1802, Apple Monochrome
Super Nintendo - 1 complete
Vectrex - 1

New Hardware

- in boxes, etc.

Atari 7800 - Minus power suply
Atari Trakball

Misc.

- other stuff

2 shoe boxes of manuals for all systems
Misc plastic cases for carts, etc.

Terms:

Minimum bid is $500.00 (US). [Less than .50 / cartridge!]

Buyer is more than welcome to resell parts or all of this collection.

Buyer may request that some of the items be dropped off at Goodwill if
they do not wish to pay for shipping (like the monitors for example).

Shipping and Handling (packaging) will be paid by buyer.
All items must be shipped to one address.

Payment must be in the form of a Postal money order or certified check.

Collection is available for viewing in Indianapolis, Indiana.

Address phone number available upon request.

Please direct any questions to me at jscott@iquest.net.

Thanks, and let the bidding begin!
Jeff

Two 3-pole 3-position switches on the right rear of the computer to switch them, and four LED's on the along the top left of the computer under the 130XE logo that shows me which OS I'm using. I did the UG about 5 years ago... Would you be interested in seeing the schematics I used? Its a piece of paper I could probobly scan and send as a GIF or something (monochrome).

How does the circuit you are building work? Software selectable OS? (hey now that would be cool!) :)

Ryan.

The Indus drive is the only one with a Z80 processor. The Atari 810 and
1050 used a 6507, and the Happy upgrades added more ROM and RAM to it.
The XF551 used an 8048 or something in that family.

3723. WTB: old Atari 8-bit games on disk

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-09 00:00:00 UTC
From: magnus@x-net.net
Message-ID: <328508e3.67347047@206.74.59.105>
Source record: 78786

I'm looking for old software games for the Atari 8-bit computer.

I do not want carts.

I am esp. interested in old Infocom games, Electronic Arts games, and
any Ultima games.

Games must include box, documentation, disks, and anything else
original to it.

I will make exceptions in the case of any Ultima games.

Thanks!

magnus@x-net.net

3724. 320x192, 8 colors

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-10 00:00:00 UTC
From: davepat@total.net
Message-ID: <5636k1$nib@newsfeeder.total.net>
Source record: 78787

Looking through my archives, I found the following... think it may be of some interest...

Date: 4 Feb 91 13:53:22 GMT
From:jbuhl@arizona.edu (Jesper Buhl)
Subject: HiRes+8Colours for the 130(65)xe ...

Okay, upon an infinity number of request, here's the first program, supplying the Atari 130xe with 8 colours/greyshades in 320x192 pixels resolution (or 4096 in 80x192).

I made a little interface, allowing the routines to be called from BASIC, but those of you who can see what's going on, shouldn't need it. Anyway, IF you want to use BASIC at the same time, do not use the normal graphics statements, and do not press the 'Reset' key, since the fast & efficent Atari BASIC will overwrite both image and mcl storage.

To activate the utility, run "RUNME.480", and when ready, use
DUMMY = USR(19984).
Hereafter you can switch back to the normal screen by typing
DUMMY = USR(20018), or plot a point with the (constant!) function
DUMMY = USR(20040, X, Y, C), 0 <= X <= 319, 0 <= Y <= 191, 0 <= C <= 7,
where 'C' is given by

C | color | R | G | B

0 | black | | |
1 | blue | | | +
2 | green | | + |
3 | cyan | | + | +
4 | red | + | |
5 | violet| + | | +
6 | yellow| + | + |
7 | white | + | + | +

The colors R, G, B are located at 12290, 12289, 12291, and will have to be changed on a NTSC TV set (I believe). If you want more colors (= less resolution) try POKE 623, 64*N, 0 <= N <= 3, but note that this takes no effect on the plot routine.

Leave out the quotes, and use a comma between the filenames. Filenames
must be in upper case in Atari DOS. Other systems like Mydos or Spartados
might allow lowercase names, but the D: still has to be uppercase.
You don't use quotes in Atari DOS, only in Atari Basic, and then it would
be "D2:GALAXIAN.EXE" (but, you can't load an EXE file from Basic anyway).

>
>P.S. How the heck do you get into the pub in IBM emulated MULE? No matter
>what I just sit on top of it!!!

#
PRIZES & DISCOUNTS:

This is the start of many auctions that I hope to have in the coming
months ahead (this Auction is actually my 4th). Because of this, I will
be starting this first one with prizes which will be given to the top
three bidders in this auction, in an effort to makes thing a little more
competitive and fun. A description of these prizes is given a little
further down.
#
As an added incentive, I have decided to discount off the cost of the
shipping to 10% off the total cost for each time the bid goes up $10.00
starting from the minimum bid on up, to a maximum of 70% off the shipping
cost. This is noted at the bottom of each system package write-up below,
as the "Shipping Cost Savgs: xx%". I guess you could say, "The more you
spend, the more you save." or have I got that backwards :).
#
#
SHIPPING INFORMATION:

All shipping will be via UPS Ground. If you prefer US Mail for
whatever reason, you must specifically request this (for more info, on
US Mail shipping, read the end of this section). Please note that UPS
is NOT be able to ship to any Post Office Box numbers.
#
The aproximate weight of each system is noted at the bottom of each system
package write-up. This total weight along with the buyers zip-code
location, will be the criteria used in determining the total shipping cost
for UPS Ground. The 10% savings will be taken off of this total shipping
cost.
#
The winning bidders will be notified by email of the total shipping cost
(minus your savings), rounded to the nearest .50 cents (ie: $5.25 = $5.50,
$5.24 = $5.00, etc), at the end of the auction.
#

Most of the systems will be mailed in one box, except for maybe a couple
at the most. If 2-boxes are used, the total shipping cost will be the
cost of sending both packages via UPS Ground to that zip-code location.
Each 10% savings is based on the total shipping cost of both boxes.
#
All systems will be wrapped and packed with foam peanuts, paper, and so
on, to insure its safe delivery to your door. UPS automatically includes
a $100.00 insurance on each item mailed. If an item is sold at more than
a $100.00, I will add an extra $100 insurance on it at no extra cost to
you.
#
By specific request, I will ship via US Mail, but this will increase your
shipping cost somewhat. Also, this increase will vary depending on if you
request 1st class or third class. Aside from the increase, I can only
mail US Mail on Saturday mornings. All this means that it may take a lot
longer for you to receive your items, so please be a little more patient
if you are requesting US Mail shipping. Thank you.
#
Shipping to Canada and other places outside of the continental US will
be shipped via US Mail. This will greatly increase the shipping costs,
for reasons described in the previous paragraph. Please read it before
you bid, if this applies to you. Thanks you.
#
#
SYSTEM INFORMATION:

Most of these systems are far from bare and I believe the minimum
price on each system to be more than reasonable. If the minimum price
is not met near the end of the Auction, I reserve the right to pull it.
#
Each system package write-up will include a brief description of the
system itself, its condition, and all peripherals and software that may
be included with the system.
#
The minimum bid and the current bid will always be shown along with the
per-cent savings at the bottom of each write-up. Hopefully, this will
aid you (and me) in figuring the savings a little more easier.
#
At the bottom, you will also find the total shipping weight, an aproximate
shipping cost range (to be more accurately determined when the zip-code of
the winners are received), and the bidder name of the person who owns the
current bid. The "Shipping Cost" price ranges shown are aproximate and
are there onlly as a reference for you to use. The actual cost will most
likely be on the low end and will be determined at the end of the Auction.
#
#
TESTING... ... ... TESTING...:

All systems have been tested and are in good working condition (or better)
unless otherwise noted. A system not tested or not working will be noted

as such in the write-up. Each write-up will have an inventory list of
what is included with the system. Any items not tested or working
properly will be noted by an "@" symbol at the beginning of that item.
Usually, items were not tested mainly because the equipment to test it was
missing or I just didn't have the time to test it or it was something
that I believe should be working (RF cord, RF switch, Some Disks/Tapes).
#
#
EASY RATINGS FOR SYSTEMS:

A ratings flag for each system will be shown to the right of the package
number. These ratings indicate the overall condition of the computer
itself and have nothing to do with how well it works or whether it
works at all. Either it works or it doesn't, and if it doesn't, then
it will say so at the start of the write up. To use the ratings flag,
see below:
#
* .... Piss-poor shape - (don't think you'll find any here).
** ...... Will have a few dents, markings, discolorations, etc.
*** ..... Average unit with some defects, maybe 1 or 2 minor dents.
**** .... Very good shape - may have very minor defects - very nice.
***** ... Excellent shape - close to new condition - sharp looking.
#
NOTE: The ratings given are of my own opinion which may not be the same
as yours. I have included them here for your reference only. If
you don't agree with its rating when you receive the package,
please remember that first sentence :). If any case, I believe
you will find that it is in better condition than I have rated it.
#
#
RULES NOTICE:

RULES WILL BE LISTED AT THE END OF THE SYSTEMS WRITE-UPS EVERY THREE OR
FOUR UPDATES (INCLUDING THE 1ST AND LAST UPDATE). IF AT ANY TIME. YOU
WANT A COPY OF THESE RULES, JUST LET ME KNOW AND I WILL SEND YOU A COPY.
#
#
NOW FOR THE FREE STUFF:

>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>><<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
*** FREE STUFF ****** <<PRIZES>> ****** FREE STUFF ****** <<PRIZES>> ***

The following 2600/7800 Games will be awarded to the TOP Auction Bidders.
All games are shrinkwrapped. Bidders totals will include everything
that was bid on and won, which means totals can be combined from system
to system. May the one who spends the most money be rewarded :).
#
TOP Bidder Prize #1:
(3-2600 Carts)..... Defender II, Jr. Pac-Man, Solaris
(3-7800 Carts)..... Meltdown, Midnight Mutants, Tower Toppler

#
TOP Bidder Prize #2:
(2-2600 Carts)..... Gravitar Venture
(2-7800 Carts)..... Ballblazer Barnyard Blaster
#
TOP Bidder Prize #3:
(1-2600 Cart)...... Dark Chambers
(1-7800 Cart)...... Mat Mania Challenge
#
NOTE: Most of the above boxes are in great shape with only a
couple of them having slightly squished corners. These
cartridges cannot be tested for obvious reasons. If one
does not work, remember they were FREE.
#
****
NO EXTRA SHIPPING will be charged.
****

Pkg #15: Non Working Items: A5

Other misc non-working items (PLEASE BID AS ONE LOT):
#
- Radio Shack TRS-80 Micro Color Computer - Complete (Box, Ins, Docs).
---> I can't get this to work - don't know why.
#
- Atari 7800 (This is just the 7800 game machine - nothing else)
---> This works! The problem is that the carts go into the slot
at an angle. The right side will not allow the cart to be
inserted all the way in. This doesn't seem to affect it,
as all of the carts that I tried, worked on it anyway.
#
- Tournament 2000 by Unisonic (Original Box - No Instructions)
---> DOES NOT WORK! This looked like a real good system at one
time, but unfortunately, it's had more downs than up's.
Unit is white and includes Tennis, Table Tennis, Hockey,
Soccer, Squash, Practice, Targets, and Skeet. It also
includes a Tiger Electronics machine gun and rifle, but
unfortunately again, the rifle part is missing. It also
has one knob broken.
#
- 2-Super Pong IV Tele-Games (Sears) units:
---> Uses 2600 Power Supply (NOT Included). These units does
work, but all I could get were diagonal lines. Units
are black and grey and appear to be in very good condition.
#
- Atari 400 (NOT TESTED) (NO Power Supply)
---> This system looks like it has been really used.

#
#
RULES:
#
1- Auction ends on 11/24/96 at 9:00PM EST.

#
2- When auction ends, it will go into a 24-hour mode of bidding
for those bidders who have made at least one bid during the
start and end times of the auction. Bidding will continue
as long as someone places a bid higher than the current one,
within 24-hours of the last previous bid. This will allow
someone the opportunity to rebid on the package, in the event
that somebody else enters a bid at the very last minute.
#
3- I must have your full name and address with your first bid.
If you wish to use an alias, tell me what it is. Otherwise, I
will use the first portion of your email address.
#
4- Bids will be entered on a first bid/first get basis. If your bid
does not show up and someone else's does, that means that your bid
came in after and was disregarded by me. I will take straight bids
only on this package. NO conditional bids will be accepted.
#
5- Minimum Bid Increments are:
$ 5-$19 = $1.00
$20-$49 = $2.00
$50 &UP = $5.00
#
5- See the start of the Auction for shipping rate information.
#
6- If you bid, you MUST pay. I cannot enforce this, but if you
cancel or refuse to honor your bid, I have the right to bar you
from bidding in any future auctions that I may have.
#
NOTE: In the unfortunate event of a cancellation, I will refer
the current bid back to the previous bidder who had it.
#
7- All items and carts are working unless I specifically stated
otherwise. If something was stated as working and does not work
when you receive it, please let me know right away. Thank you.
#
8- I will accept either a Check or Money Order. If you send a check,
I will wait 7-10 days for it to clear, but if I've already had some
dealings with you, I will mail them within 72-hours. If you send
a Money Order, your items will be mailed within 48-hours of when
I receive it. I prefer a Money Order if at all possible. If you
have to send a check, it may take a few days before I can cash it,
therefore delaying your package that much longer.
#
9- This is a request, not a rule. If you find any errors in my post,
please let me know about them, so I can get them corrected for the
benefit of everyone concern. Thank you.
#
****
***** Good Luck to all those who will place bids *****

Don't forget that each pair of Atari paddles plugged into one joystick port. You could have up to 8 paddles working at once on the old 400 and 800s. Anyway, it looks like your pad uses the paddle senses to show x and y position of the stylus on the pad. If using the paddle in a basic program, the paddle values would have to be scaled to whatever you'd want to use it for. Do the values change from 4 as you press on the pad? If not, then wait for another responce from someone who knows what he's talking about :).

I just picked up a Suncom Animation Station Computergraphics Sensor Pad for
50 cents at a flea market.
It didn't come with any software and I was wondering if anyone has any
specs or software for this thing.
The buttons on it correspond to STICK(0) and both paddle 0 and 1 are at 4
in basic. It only plugs into one
joystick port..... Anyone???

Thanks Marc.

Toad Computers has them even cheaper:

Atari 8-Bit Computer Systems

Atari 800XL (64k) $59.00
Atari 800 (48k) $39.00
Atari 1200XL(64k) $49.00
Atari 65XE (64k) $49.00
Atari 130XE (128k) $99.00
Atari XE Game System (64k) $59.00

They can be reached at http://www.ataricentral.com:80/st/

3736. Atari Explorer XE System ad

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-10 00:00:00 UTC
From: Richard.Douwes@hcc-lwd.idn.nl
Message-ID: <3a0_9611101804@idn.nl>
Source record: 78799

A while back, Christopher Brett Strong asked about the 65XEM. I typed a part of the article from Compute!, April 1985, which mentioned some specs.

All this talk about the XE vaporware stuff reminded me of an ad from "Atari Explorer" from about 1985. It showed a complete XE system, complete with XE style color monitor, ditto printer, diskdrive (and modem?). I have been searching my "archives" for it, but to my unpleasant surprise, I haven't got it anymore!

Is there anybody who knows what I am talking about? It was on the back of the, I guess, Summer 1985 edition. Is this ad "available" on any WWW page? Can anybody scan it and put it on some WWW page or Email it to me?

Someone should start the official "Atari Vaporware" site, there's plenty of it (not) around :)

Gregory A. Lovekamp (genius@eosinc.com) wrote:

: My question is: How do I get the Atari files from this machine transferred
: to my PC to run under emulation? I have read about a cable from Atari SIO
: to IBM 9 pin serial. How do I make one? Where do I get the software for
: each end?

Chances are, the software is already available via anonymous ftp from
ftp3.cyberspy.com, in the /atari8 directory.

Otherwise, the best prospect would be an APE/SIO2PC cable. You can find
information at http://www.nacs.et/~classics. (The schematic for the
cable is there.)

There's also a really simple cable you can build that connects the PC to
the Atari's joystick port, but transferring is quite slow (about 6
minutes for a single-density disk).

Do you know how I can make this cable and find the driver for it? I only want to transfer single files from my ST, hooked to the Internet, to my 8-bit.

I think I've seen something like that on the box of the 130XE that showed
the "complete" XE system. Except for the computer and printer, I never
even seen any of that other stuff. I guess they only used the matching
pieces for the photo, XL style stuff would clash! :)

Anyone know what's up with FIDOnet? Seems the are either modifying or dropping the Atari sigs due to low traffic. But I saw somewhere that the two sigs, 8-bit & ST, will be combined as a single sig.

Any FIDOheads out there?

Whilst reading the usual rubbish I find here, Daniel Klugh wrote something
interesting to All about Two Atari 800 questions.:

Hello Daniel,

DK> 16k is the limit before you have to go to bank-switching,not 8. The

Okay, okay, so I was a bit out. I'm getting old, the 'ole grey matter ain't
what it used to be. Cut me some slack, eh? :-)

DK> There's also the R-Time8 cartridge.

Ah, I wasn't sure whether the R-Time was available for the 800 right slot.
Cheers.

I stand corrected then. The SX-212 did have connection to 8-bit
SIO. I never had one so I'm sure you're all correct and I was wrong.
I went with the P:R:Connection myself, and 2400bps back then. And
later got the MIO which also has the RS-232. All of which now sits
unused for lack of time (and lack of interest I guess) to play with it
anymore. And I can't seem to bear to give it away since I spent a ton
of money on all this 8-bit Atari equipment and software. I understand
the 8-bit Atari was quite popular in parts of Europe. Is this still
true?

While they may be good in some cases, what I dont like about them
are when they are only used to animate graphics. Those and server
push animations bother me, simply because:

1. They make my HD do more work than it needs to
2. Its hard to tell when the page is done loading
3. It is difficult to do anything else becuse the CPU is being used

Adding in an extra PIA is relatively easy (you need one chip for logic
select, and a line to the CPU for the address). Write a little patch for
all the OSes that's "aware" of the chip, and use it to swap them.
Theoretically, you could get 65536 different OSes soft-selectable. But
where would you fit all those EPROMS? ;)

Doesn't anyone care about old computer?!
Find out in the new magazine of computer history nostalgia -
"Classic Computing" magazine

Historical Computer Society
3649 Herschel Street
Jacksonville, FL 32205
Contact: David Greelish, President and Founder
E-mail: historical@aol.com
On the World Wide Web - http://www.cyberstreet.com/hcs/hcs.htm (under construction)

JACKSONVILLE, FL, November 10, 1996 Some people collect stamps, baseball cards, dolls and even cars. But did you know that there is a group for people who collect computers! This group even has some members with over fifty computers in their own private collections! The Historical Computer Society is an international user group for old computer enthusiasts (old computers and/or old enthusiasts). HCS has over thirty classic computers in it s own collection; important older machines which most people have never seen before, much less heard of, like the IMSAI, Osborne, PET and more. The Society is dedicated to preserving older and classic computer hardware, software and literature while educating and helping it s members as well as the general public. Their new quarterly magazine, Classic Computing is all about personal computer history as well as computer history in general! In only twenty short years, there is much history to be shared just about personal computers. The Society and it s magazine were started in the pioneering spirit of the early computer clubs (like the Homebrew Computer Club). Even with today s impressive technological breakthroughs in computing, that fresh, exciting, pioneering spirit doesn t seem to be a part of it all anymore. HCS hopes to rekindle some of that excitement and to share it.

Many people have fond memories of their early computing days. Never has another device evolved so rapidly as to produce nostalgic artifacts in less than a quarter of a century! Classic Computing is a forum for these people to meet and share their stories.

The Historical Computer Society intends to become the authority in the community of retired personal computers. Hundreds of old computers are thrown out everyday by Americans as junk, but HCS believes that these outmoded machines have value. HCS can help owners find answers about system operation, peripherals, software, books, magazines and service.

Classic Computing is the central forum for members and is ready to become the premier circular for information, classifieds and trading of outdated equipment, etc. New subscriptions in the U.S. are only $14 a year

or try an issue for only $3; subscriptions in Canada are $16 and $24 international. Classic Computing is sold at The Computer Museum in Boston, the American Computer Museum in Bozeman, Montana and at Smithsonian Book Stores, Washington, DC.

HCS is beginning a local meeting chapter in Jacksonville, Florida! Meet once a month with others who share in the passion. If you live in North/Central Florida or Southern Georgia and would like to attend, please write David Greelish by e-mail for more information of the first meeting.

Let's take a look at the _included_ documentation:

"-lock50" Lock the emulator at 50Hz (=PAL)
"-lock60" Lock the emulator at 60Hz (=NTSC)

That's from the command-line. You can also use the user-interface
(if it works on your computer ;-).

Bye,
Markus

Not in the image.
The image starts at 0 and the original ROM at $c000. Therefore
you must subtract the starting-address of the ROM first.
Of course it's something different if you patch a "ROM" that
you copied to the underlaying RAM.

OOOOH!!! I had the software for this on the C64. Don't know what I did
with it though. Damn.

If memory serves, though, this little device came out much, much later
than the Koala Pad, at least for the Atari.

I have a few questions regarding the 8-bit. I want to upgrade my 800XL to Rev C BASIC (it currently has Rev B). Rather than going the simple route of using a Rev. C cartridge, I would like to keep the BASIC internal. Can I use the ROM from a Rev C cartdridge, or is BASIC part of the OS ROM, which will have to come from another machine?

Also, is anybody selling an Assembler/Editor cartridge and the book "Mapping the Atari"?

Hmm.. Has anyone ever considered a Flash-ROM? That would be VERY
cool.. just load up a rom flasher APP, list off all the ROM images on
the disk, and it will flash that Image to the ROM :)

Try adding -modex to your command line (e.g. atari -nobasic -modex
dos25.xfd). This might help a little.

How about that? An emulator that runs too fast. Is it really possible?

> were internal brackets that held the two drives in place. Bob Brodie has
> one that is like that. Mine have holes in the case on one and clean on
> the other (but, I don't have brackets for either).

Actually, the message that you replied to was not from me. My 1450, like that of the author, had a sheetmetal bracket. Mine did not have the screws sticking out, although it has the screw heads visible. I was told that the versions for the shows had the internal brackets, while some of the in-house prototypes did not. Mine does not have a textured case or anything; it's obviously an early test molding. I suspect my (Tong) board belonged to someone working on the drive code. The drive EPROM has the latest date on the sticker, and the socket shows signs of frequent use.

> They look like big PALs to me. I doubt that Atari would have done an ASIC
> at that point in time - mine are not sealed either....

That could be. I suspected ASICs as many companies had sort of an "off the shelf" ASIC-like service where you can get semi-custom chips stamped out. Kind of like the Xilinx PGA's, but one-time mask-programmable.

> the 8040 is the microprocessor that runs the drive interface. same device
> as in the XF551...

Ah. That one I did not know. I never bothered to look it up.

Check out the merit software archives at:

gopher://gopher.archive.umich.edu

Under atari/8bit, there's SIO2PC (somewhere). It has cable plans, and
software that lets you use the PC for storage. It saves disks in the .ATR
format used py most of the emulators.

Well, I've seen the replies for the correct syntax to copy files, and
yes they are correct. In the DOS menu you type :

C<enter>, and it responds "COPY FROM, TO", and you respond with
D2:GALAXIAN.EXE,D1:GALAXIAN.EXE

(just putting in my 2 cents worth).
As for the problems with Mule, it sounds like the collision detection
not working properly. Probably cause it's an emulator- which in my
experience cannot run more than 50% of ATARI software, or less!
My solution- get a real ATARI, then you can run anything U want!

Good luck finding Crystal Castles. It's become a very rare cartridge and anyone who has one should get a premium price now. Maybe Yogi can help.

3771. Ape 1.10 & Ape Warp+ OS Now Available!

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-12 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <56920g$h3p@freenet-news.carleton.ca>
Source record: 78884

The long awaited version 1.10 of the Atari Peripheral Emulator is now
available at the APE Home Page http://www.nacs.net/~classics.

My sincere personal thanks to everyone who sent bug reports, comments,
and of course those who kept APE alive by registering! :) You all know
who you are and your help is greatly appreciated.

All registered users should contact me for an upgrade to 1.10, all beta
users, including beta 2 should also upgrade.

Upgrades to this version of APE are free. See the end of this message for
a list of new features and bugfixes.

Also available publically for the first time is the Ape Warp+ Quad OS upgrade!

Average increase in load times is 320.5%, see the InfoPage for specific
benchmarks and a complete features listing.

Some info from the Ape Warp+ OS Infopage http://www.nacs.net/~classics

- The APE WARP+ OS is replacement operating system for the Atari XL/XE
computer that provides high speed I/O and power user features not
available in the standard XL/XE OS.

- The Warp+ OS is a direct hardware replacement for your existing OS,
so clumsy drivers and OS patches are never required!

- Your high speed I/O and power user features will always be available,
even when playing games and using software that would make patches and
drivers impossible!

- The APE Warp+ OS is not required to use APE (APE has actually been around
much longer!) but once you try it, you will wonder how you ever used
your Atari without it!

- Features

- Ape Warp+ 3X SIO: Built-in support for APE Warp+ 3X SIO at ALL TIMES. You
will no longer need to use special DOS systems (i.e.
Spartados) or OS patches to get the highest possible
speed from your Atari. This means your disk images
will boot at 3X APE+ SIO, ALL images, even games!

- Ultraspeed compatibility: The APE Warp+ OS is also capable of full
ultraspeed operation with all Ultraspeed compatible devices, such as
US Doubler Enhanced 1050's. These devices will boot at full speed,
and disks formatted with Ultraspeed sector skew will enjoy full
ultraspeed performance at all time, even in games!

- Backward Compatibility: The APE Warp+ OS is backward compatible with all unenhanced devices, and will dynamically switch between enhanced and unenhanced operation if you mix such devices on the SIO chain!

- Coldstart on Demand: We all know that turning your Atari on and off every time you need to reboot will shorten the life of your computer over time.

Now you can turn on your computer once, and never cycle the power again until you are really ready to turn it off! Just hold down SELECT while pressing RESET and your computer will COLD boot, just like turning the power off!

- Reverse BASIC: Tired of holding down OPTION to disable BASIC? You only need BASIC 1 out of every 100 times you boot? Now you can hold OPTION to enable BASIC! BASIC is by default DISABLED with the Warp+ OS!

- Compatibility: The Warp+ OS upgrade includes 4 complete operating systems for the ULTIMATE in XL/XE speed and compatibility!

1. APE Warp+ OS
2. Your standard XL/XE OS
3. A public domain Atari 800 Compatible OS for running those 800 only disks and cartridges
4. Your Standard XL/XE OS w/ Reverse BASIC Feature

For a complete feature listing and ordering instructions go to http://www.nacs.net/~classics

---

Ape 1.10 Enhancments since 1.09 beta

FTED32G.ATR contains the Shareware version of Spartados 3.2g. Spartados is an advanced _high speed_ DOS system from Fine Tooned Engineering.

APE_WARP.ATR contains: MyDos 4.53 System
3x Sio APE+ OS Patch for any Atari DOS
MyCopier High Speed (upto 3x sio) sector copier

The .PRO images in this distribution are example PRO System images to showcase APE's ability to emulation complex copy protection.

Changes since 1.09

11/11/96 1.10. Added or improved since APE 1.09:

* Added initial ATR-FAST code.
* Buffers are allocated earlier in the initialization for computer with low memory.
* ATR FAST system now supports multiple call methods and keystroke activation
* Setting the framing threshold sometimes caused an infinite loop, fixed.
* The TILDE character used in Windows95 long filenames caused

filenames in the PC MIRROR to be garbled. Files now use the
underscore character for long filename translation
* While writes to the PC mirror under spartados are not supported,
trying to do it caused a crash instead of a warning. Fixed.
* SpartaDOS X cartridge support for floppy formatting added
* SpartaDOS X cartridge support for PC Mirror added
* SpartaDOS X cartridge now sees the PC mirror and can read it.
* SDX COPY command now compatible with PC Mirror.
* Problem with last path used in ATR file selection fixed
* Ultraspeed and Ape Warp+ 3x SIO now compatible with more software,
Top Mag, Superdos, etc
* ATR FAST now displays ATASCII comments properly
* ATR FAST system now responds to shift driven option
* Extra SIO commands added for more support of the 1050 Speedy
upgrade. Bibocopy 1.5 now works at 56k
* Some functions optimized to allow faster performance with the APE
Warp+ OS
* Configuration menu totally revamped
* New configuration options: Safety Margin, Sio Control Method, file
selector choice.
* Cursor was sometimes left visible after a pick box was displayed.
Fixed.
* More robust configuration file checking installed
* Many new features added to the Win95 file selector
* APE sometimes left stray characters at the right margin. Fixed.
* Write protect no longer clobbers byte 15 of ATR header
* APE fully supports CRC32 ATR Authentication. ATR Authentication
standard and documentation available at the APE Home Page.
* Warp_453 from 1.09 now obsolete due to new driver in APE_WARP.ATR.
3x SIO patch for MyDOS/Atari DOS now much more reliable.
* New versions of MyCopier included on the APE_WARP.ATR. Old version
was also corrupted.

-

Changes from Ape 1.09 BETA --> Ape 1.09 Full Release (5/24/96)

Ape now includes an XFD conversion utility in addition to an improved
and hopefully now complete DCM conversion utility. Image conversion
is available to all users and is invoked with the 'A' keystroke.

Many users asked for APE to handle commands sent by the Sio2PC program
REMOTE.OBJ. Ape now handles these requests, but obviously you must
use APE keystrokes. Keystrokes accepted for registered users only.

REMOTE.OBJ was created by and is the property of another software author and
is therefore not included in this software package. I'm not aware of
any restrictions on its use, but if it requires some type of payment
for use of course please register it.

You can now select a new ProSystem emulation mode for any image
directly from within APE as of 1.09. This _greatly_ speeds up the

PRO image testing process. Registered users only.

Sometimes the screen was left 'dirty' from previous menus, little dots
at the right edge, etc. Fixed.

The shareware version of APE could crash in the Atascii/Ascii viewer. Fixed.

The file selector has again changed and you should note a significant
change to the usage of the 'Additional Extension' option of
configuration menu 3. This option used to specify the extension of
the files to be displayed in the file browser.

This setting _no longer_ performs this function. It now specified an _extra_
extension to be displayed in the file browser. ATR and PRO extensions
are now automatically displayed at the proper times. If you have this
option set to '*' I suggest you clear it so you dont have to wade
through tons of useless files to get to your disk images.

No, get rid of the quotes. With Atari DOS 2.x, on the DUP.SYS menu, hit C [return] GALAXIAN.EXE,D2:*.*

That will copy the galaxian file from D1: to D2:.

3781. Atari BBS List: 96-11-12 (refresh)

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-12 00:00:00 UTC
From: oscar@justified.com
Message-ID: <MPG.cf1eecb80408f96989769@client1.news.psi.net>
Source record: 78894

Well, I've gotten a few mail messages requesting this list lately,
so I'm reposting it eventhough there haven't been any updates.
I'm not currently active on the newsgroup since I've got quite
a few other things going on, so if someone would like to take this
list over, please let me know.

--

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was
checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

```

I have a photo copy of the Starfleet manual ... it is about an inch
thick!!! By the time I got to the end of the manual, I forgot what
they said in the front of it!

Bill

Cross-posted to: comp.emulators.misc,comp.sys.atari.8bit

Announcing VSS (Virtual Super System) V0.60
an Atari 5200 emulator

copyright 1996 by Daniel Boris (dan.boris@coat.com)

VSS is an Atari 5200 Super System emulator for MSDOS. The current version runs about 80% of the
ROM images I have almost flawlessly, and at a reasonable speed even on a 486DX2/66. On a Pentium
system the emulator gets close to, or better then full speed on a lot of games. To use the emulator you will need a copy of the 5200's 2K BIOS ROM, and 5200 ROM cart images. Due to copyright reasons, I cannot provide these.

The following games run almost perfectly:
Pac-man,Ms. Pac-man, K-razy Shoot Out, Frogger, Frogger II, Jungle Hunt
Astrochase, Berzerk, Blue Print, Centipede, Defender, Gorf, Gremlins,
Kaboom, Missile Command, Super Breakout, Star Raiders, Space Dungeon

What's new in V0.60

-Ported to DJGPP (32-bit DOS protected mode) for increased speed.
-Real joystick support in analog and digital modes.
-Fixed bugs in frame skipping. (Some games did not work with frame skipping on).
-Fixed bugs in video emulation.
-Fixed bug that locked up Star Raiders.
-Added new integrated debugger with more features.
-Dual joystick support through keyboard.

Note: I you used version 0.50 be sure to read the documentation because some \
of the key assignments have changed.

The current version of the emulator supports:

- 16K or 32K ROM images.
- 2 joystick emulated through the keyboard
- 1 joystick emulated thourgh the mouse or joystick.
- All keypad and trigger buttons on controller are emulated.
- Configurable frame rate.
- Integrated debugger and disassembler.

The current version does not support:
- GTIA modes 16,17,18 (Title screen to Ballblazer)
- Horz/Vert fine scrolling (Games still work, but the scrolling is not smooth)
- Sound.

You can find the emulator on my homepage at:

http://www.geocities.com/SiliconValley/9461/emulate.htm

Oscar, SELECT BBS finally went offline on November 2, 1996 after 12 continuous years of operation. And I do mean continuous! From August 15, 1984 - November 2, 1996 the BBS was only down ONE day. I'm not aware of any other Atari BBS which can make that claim!

Anyhow, the remaining Atari-lovers in Sacramento and on the Carina-Net will miss it dearly.

That's not unlike the method I considered using to be able to non-fatally switch between OSs. However, I didn't (and still don't) see the need for software selectability, so I didn't bother with the extra PIA.

But even if I were going to do something like that, I'd still only use one EPROM. I've got a 4MB EPROM that can hold 256 OSs. But at last count, I think I only had about 19 different OSs for my Atari.

Tell ya what, you come up with the other 65,517 OSs and I'll build the hardware to switch 'em! ;)

3787. SILIconvention´97 Party

```
================================================================================
SILIconvention'97 - Germany//Bremen - http://www.siliconvention.com
OFFICIAL INFO TEXTFILE v1.0
================================================================================

The Organizers of the FRIED BITS I-III, BB SYMPOSIUM'96, YELLING JAM PARTY
and INTERCON'96 Party bring you the biggest computerparty at easter 1997.

--------------------------------------------------------------------------

The Organizers are: Absence (Atari + PC), ADM (Atari), Fairlight (C64),
Icebird (Acorn), Inter (Atari), Oxyron (Amiga + C64),
Plush (C64), Talent (C64), TSCC (Atari)

Where and When?!
--------------------------------------------------------------------------

Buergerhaus Obervieland
Alfred-Faust-Str.6
28277 Bremen//Germany

Begin: 28.03.1997 12:00 CET
End: 31.03.1997 12:00 CET

All Systems are welcome! That means we have lots of Competitions for the
following computers: ACORN, AMIGA, ATARI, C64, PC.

Entrance Fee:
--------------------------------------------------------------------------
The entrance fee ticket will cost you 30 DM. Please pay in DM only!
If you want to reserve your coming, you had to pay only 20 DM for each
member. More informations are on our homepage or dial this number:
+0049-421-8498236. From 19:00 to 23:00.

How to reach the SILIconvention'97?!
--------------------------------------------------------------------------
by car: Drive to Bremen over the highway and exit at
"Bremen - Brinkum". Then follow the signs that will show
you the way to SILIconvention'97 Party. If you are in
trouble by finding the partyplace, just call this number:
8498329.

by train: Get out at "Bremen Hbf" (main station) and take the tram
number 1 way "Arsten" and get out at "Kattenturm - MITTE"
and follow the signs... If you are arrived after 23:15
then call this number: 8498329.
```

by plane: When you have reached the Airport Bremen call this
number: 8498329. Please give us the number of people who
arrived - thanx!

There will be the following competitions on the SILIconvention'97
---

1) AMIGA Demo Competition
2) C64 Demo Competition
3) PC Demo Competition
4) ATARI Falcon Demo Competition
5) ACORN Risc PC Competition

6) AMIGA 40Kb Intro Competition
7) ATARI Falcon 96Ktro Competition
8) PC 64Kb Intro Competition
9) ACORN Intro Competition

10) Coding Competition (all systems)

11) Grafik Competition
12) C64 Grafik Competition
13) Render Competition

14) 4 Channel Protracker Competition
15) Multichannel Music Competition
16) C64 Music Competition

17) Wild Competition
18) Surprise Competition
19) Netwave Competition
20) Fake Demo Competition

Many competitions - lots of prices. Our sponsors will spend lots of
prices and money to this party. Be sure!

Check out the best partyplace you've ever been. What about a big building
complex with showers, kitchens, lots of party halls and rooms and a nice
presentation hall with the greatest video beam and brainblasting sound
equipment!

Yeah! On the SILIconvention'97 is place for about 2.000 people including
their equipment plus seperate sleeping rooms.

There is a seperate disco-room on the partyplace. There will be a great
RAVE-Act and SID-Act during the SILIconvention'97! Entrance for party
guests is free. Have a nice Rave?!

You wanna Party T-Shirt's - You gotta Party T-Shirt's!! The best T-Shirt
printing techniques you've ever seen. The Shirts will be FRUIT OF THE LOOM
T-Shirt's.

Please note this: - smoking is allowed. In some rooms, smoking is
absolutly forbidden (sleeping romms a.e.)

- alcohol is allowed. If somebody makes trouble
he will be kicked out.

- please don't park your car at the entrance door
or emergency escape.

/// contact us for more information about SILIconvention'97 ///

> (hey now that would be cool!) :)

What are you switching with those toggles? Vcc on each of four EPROMs? CE? Address pins? Do your switches assert or deassert the selected line? Do you switch it directly or use a pull-up resistor?

The one I'm building uses a single button (and four LEDs). It uses logic hardware to electronically cycle between four OSs within a single EPROM. I can't see any need for software selection, but I have been toying with the possibility of non-fatal switching (being able to switch OSs without crashing the machine).

As I approach the end of the semester, it's getting more and more difficult to find time to work on it. Plus I need to dig out one or more 27512s, and I'm not sure I have any more blank ones. I've got it all set up and tested in my logic simulator. I just need to sit down and wire it up. Maybe I'll get a chance to work on it over Thanksgiving break.

Ok, the problem seems to be that the files have to either <L>oaded
from the DOS menu, or placed on a disk with a Bootsector menu.
If you want to you can visit my WEB page, and download 2 disks
which contain ARCADE GAMES (IE Star Raiders, Defender etc),
I have used these disks with Xformer and the games work fine
straight from the disk.

>"Mapping the Atari"?
>
>Stephen Anderson
>justin@imperium.net

From memory, the ROM in a cartridge should be the same as what is
placed in the 130xe- separate from the OS ROM. The only problem you
might have is if the Basic ROM in your computer is soldered in or
Socketed. If it is socketed, then you should be able to just pull out
the old chip and drop in the new..
As for the Assembler/Editor, I could send you a Binary file of the
program. That will work loaded direct from DOS, of course if reset is
pressed then you lose the work.
Hope I've been a little helpful for you..

Steve.

I'm looking for old software games for the Atari 8-bit computer.

I do not want carts.

I am esp. interested in old Infocom games, Electronic Arts games, and
any Ultima games.

Games must include box, documentation, disks, and anything else
original to it.

I will make exceptions in the case of any Ultima games.

Thanks!

magnus@x-net.net

3795. 6502 binary format & xassembler

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-13 00:00:00 UTC
From: fachat@physik.tu-chemnitz.de
Message-ID: <56cbdp$at6@narses.hrz.tu-chemnitz.de>
Source record: 78907
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.programmer,comp.sys.apple2.programmer

Hi there!

After the discussion has been going on for a while in the cbm newsgroups,
I decided to ask other people what they think about it.

I have designed a 6502 relocatable binary file format binary. This
format is preliminary and I'm still collecting ideas as how to
make it more useful.
I also have an assembler (written in ANSI-C) that can produce this
format.

But first I like to here your comments, esp. what you think about
the usefulness for an 65816, as I don't have any info on this one.

Thanks
Andr&#65533;

----------snip----------

6502 binary relocation format V0.9, as of 02nov1996

(c) Andr&#65533; Fachat (a.fachat@physik.tu-chemnitz.de)

0) What it's for?

With some new 6502/C64/C128 operating systems comes the need for a new
binary format that allows relocating an assembly language program to a
different location.

This text tries to find a) a good solution to this problem for the 6502 CPU
and b) an assembler source format to use this format in a general manner.
It doesn't try to define or discuss object file or library file format,
which can be implemented differently by different assemblers.

1) 6502 specifics

The 6502 has the special feature of a 'zeropage', i.e. a very limited
memory address range used for special addressing modes. So the format
should not only provide a means to relocate absolute addresses but also
zeropage addresses.

The stack is also very limited. A binary format should provide a measure
of how much stack space is needed for the application.
An issue still to be discussed should be if stack addresses should
be relocated and how. The C64 basic interpreter uses a lot of the stack, for
example. But I tend to leave the (limited) stack for its real purpose,
as stack!

Such limits should be defined as 2 byte values, even if the 6502 only
has a range of 1 byte. But the 65816 behaves differently (?).

Another problem is, that an address can be 'split', i.e. you can just use
the high byte or the low byte separately in an opcode. This gives need
to a special relocation table format, that can cope with half-address
references.

2) assembler source format (as of xa-2.1.0d, 02nov1996)

As already used in other formats, the assembler uses three different
segment types, i.e. text (the actual program code), data (initialized
variables), and bss (uninitialized variables). In addition to that, the
6502 format also includes a zeropage segment type, to allow zeropage
variables to be relocated. This zeropage segment is like a bss segment,
in that only the length, but not the data is saved.

In 2.1.0 there is a way to temporarily disable the creation of relocation
table entries. This way absolute code can be inserted into a file. This
code should then be copied to the right location at runtime.
(Later versions will also provide a way to 'embed' relocatable files
in an absolutely addressed code. At least I want to build some operating
system ROMs with that...)

2.1) allocation of data segment/zeropage segment address space

The assembler switches between the different segments by the means of
".text", ".data", ".bss" and ".zero" pseudo opcodes.
The text segment contains the program code. Data holds the initialized data,
while bss and zero segments contain uninitialized data for normal/zeropage
address space.
Everything that is between one of these segment opcodes and the next segment
opcode gets into the corresponding segment, i.e. labels, assembled code etc.
The text and data segments are saved in the file, while for the bss and
zero segments only the length is saved in the file.

2.2) referencing data/bss/zeropage addresses

One problem with the 6502 is, that it cannot load an address within one
step or assembler opcode. So an address is loaded with standard byte
opcodes, like "lda #<label". But how do we decide, whether "label"
is an address or not, and what do we if we get something like
"lda #zp_label + 12 * label2"?

The assembler is now intelligent enough to evaluate such expressions
and check for:

- no address label : ok, absolute
- one address label, only add to label : ok, relocate
- difference between two addresses : If addresses in same segment, compute
diff and set absolute, otherwise bail
- everything else : warning

This way there is no change in syntax. Address labels are distinguished
by using the "label:" syntax, as opposed to "label = value". Well, my assembler

can also use the first syntax without the colon, as here everything is a label
that is not an assembler opcode.

3) binary format

I have seen three ways to handle the relocation problem so far:

- tables: have a relocation table for a text segment
if relocation table is put in front of code (as braindead MS-DOS does)
you have to save the table in a side-storage
if table is behind, you still cannot relocate 'on the fly'.

- deassembling: go through the code, deassemble it and change all absolute
addresses. Problem: needs to know / have hints about where some
data is in the code.

- relocation info in the code: Here each address is preceeded with an 'escape'
code and is relocated when loading. But this disallows block oriented
transfer from storage media to memory.

I therefore prefer the first method, with the table after the code/data.
So I can use block oriented transfer for the text/data segment. And while
reading the relocation tables bytewise, the relocation can be done without
the need to save the table somewhere.

The proposed standard extension for the described format is ".o65".

The binary format is the following:

```
------------------------------------------------------------------
header
.byt $01 ; version
.byt $00 ; non-C64 marker
.word tbase ; address to which text is assembled to
; originally
.word tlen ; length of text segment
.word dbase ; originating address for data segment
.word dlen ; length of data segment
.word bbase ; originating address for bss segment
.word blen ; length of bss segment
.word zbase ; originating address for zero segment
.word zlen ; length of zero segment

{ ; optional options, more than one allowed
.byt olen ; overall length (including length and type
; byte
.byt otype ; option type
[ .byt option_bytes ]
}+
.byt $00 ; end of options marker (i.e. option len=0)

text ; text segment
data ; data segment
```

```
reloc_text ; relocation table for text segment
reloc_data ; relocation table for data segment
external ; list of external references
globals ; list of global variables
-----------------------------------------------------------------

The header options currently defined/proposed are:

- Filename
type=0; len=[variable]; content=string,0

- Adrlist
type=1; len=[variable]; content= address pointer list
The addresses are relocated as if they point to the text segment
An OS might use this as general jump table (may be for libraries?).
But It's better to have an own jump table for each OS; that would even
allow one binary for multiple OSes (like OS/A65-Adrlist -> init adr,
Lunix-Adrlist -> init-adr, list of exception vectors etc...)
(Should I drop this one?)

- StackSize
type=2; len=4; content= data word describing the minimum needed stack size.
The OS should add an appropriate value for it's IRQ routines and stuff.

-----------------------------------------------------------------

The text and data segments are just the assembled code.

The relocation tables are (each):

{ [255,...,255,] offset of next relocation (b), typebyte|segmentID [, low_byte] }+

where typebyte is one of

WORD $80 2 byte address
HIGH $40 high byte of an address
LOW $20 low byte of an address

and segmentID stands for the segment the reference points to:

0 absolute value
1 text segment
2 data segment
3 bss segment
4 zero segment

The offset is a one byte value only. If the difference between the last
relocation address and the next one is larger than 254, a 255 is put
in the offset byte, and 254 is substracted from the difference, thus allowing
to continue without a zero offset byte.
A zero offset byte ends the relocation table. The first offset is computed
from the segment base address-1, to avoid a 0 value in the first entry.

-----------------------------------------------------------------
```

A format for the external refernces list (i.e. a list of undefined
references) is not (yet) defined

The global list is:

{ "global_label_name_in_asc",0, segmentID, value.w }+
.byt $00

This approach allows

a) using BLOCK transfers, as no relocation info is hidden within the
code or data itself;
b) It needs no (not much) side-storage, as a segment can be read using block
transfers and then, while reading the relocation table, being
relocated on the fly. The only side-storage is the list of segments
with corresponding memory offsets. See the provided basic 'loader'
code.

Possible Changes to the format are:

- put the minimum stack size into the file header, not into an option

- have an additional byte to flag that the relocation table only allows
pagewise relocation. Well, this would insert a word at position 2
(i.e. after the initial .byt 1,0 and before the text segment base address.)
The flag would then be one out of 16 possible databits.
[This change has a high probability, I think....]

- Have possibly multiple objects in one file

- add a "static data init" function address header option that gets
called after loading but before the thing is executed. This could
make runtime linking easier, when each object is one function and not
a whole program.

Use SX Express by Keith Ledbetter (I may have misspelled the last
name). It should be readily available here on the net or via GEnie.

>the disk, and it will flash that Image to the ROM :)

Right here in this very newsgroup, between three and six years ago (I'm
not really sure), someone posted that he was building an interface to
connect the Atari 8-bit computer's cartridge port with one or another port
(I don't know the hardware) on an Atari ST. The purpose of this was to be
able to store ROM images on the ST and then either download them
into the 8-bit's cartridge memory space, OR to redirect all 8-bit-
cartridge-memory address references to a ROM image on the ST, or
maybe both. Obviously my memory of it is a bit vague.

I remember distinctly that the guy who was building this thing
sent me a PostScript document -- which at the time I could JUST
BARELY HANDLE -- of the circuit diagram for this thing; I don't
believe it was finished yet.

I see no reason why something similar couldn't be done between the
8-bit's cart slot and ANY other platform, given the proper
combination of hardware and software. As PCs et al get faster and
faster, it will eventually (maybe even SOON) become possible to
redirect 8-bit-cartridge-space address references to a "remote
host" in something approaching the "realtime" response of actual
ROM -- particularly since it is ALREADY TRIVIAL to map a complete
Atari cart -- even the BIG ones like 128K -- into remote-system
RAM. That leaves only the hardware interface and a relatively
simple (even if it includes bank-switching handling etc.)
"ROM-image access driver." I think something like this would be
clever and cool -- although with emulators of the ENTIRE ATARI
getting better and better all the time, this gadget's prime
"window of opportunity" may have passed.

Comments?

Oscar,
Just want to have you add JACS to the list.

JACS The Jersey Atari Computer Society
The BBS is run on a 1040ST using <Fnord>adel 3.51
<Fnord>adel is a Citadel network compatable BBS and is networked in the US and canada.
It is a 24/7 BBS at 14.4kbps at (609) 346-1224

JACS is mainly a general discussion BBS, but has on-going support for Atari 8-bit, ST/TT/Falcon and all game Atari game systems. The SysOp and club president is Mike Hopkins. The board is open to all with instant access to all public rooms and files. There is NO u/l,d/l ratio or minimum u/l restriction. Files are added regularly and the discussions are rather wide in scope. There are over 125 topics to choose from and most are networked with other BBSes local and wide area. JACS is located in Somerdale, NJ USA.

Enjoy!

Yes, you need the module that replaces the RAM (6510 ?).
It is actually 2 of the RAMs, piggy-backed with a few wires added. Also,
you may have to change the jumpers on J1 thru J4. Depends on if PROM
or EPROM is already in it and which you are changing to.

Rich Mier

You have to double the on-board ram as well. Depending on your drive,
there are certain jumpers you may have to add too.

I had an idea a few years ago about connecting several Ataris together
so they all shared the same ROM cartridge space. I was thinking it
would be a neat way to get into multi-processing, but I didn't research
it that far!!

Atari Computer Schtuff For Sale

I really don't know much about Atari computer
stuff, so forgive my ignorance. I got this stuff
in trade (with lots of other stuff) from a friend.
Even though I don't have power supplies for the
computers, we plugged them in at his house, and they
seemed to work ok. However, this is not a guarantee.
I can't guarantee stuff that I don't understand, but
everything looks to be in really good shape. I mention
positive tests I've done on each item.
They've been sitting in a box in my (dry) basement
for a few months. The wife wants them gone. I do too.
Anyhow onto the shtuff. Prices do not include shipping,
and are price listed or better offer.

(2) Atari 130 XE computers.....$10 a piece
(1) Atari 1050 Floppy Disk Drive w/PS
and assorted floppies
Light comes on, drive spins up,
light goes off, drive quiet.
(seems ok.).....$10
(1) Atari 1050 Floppy w/o PS (same
as above, no PS).....$8.00
(1) Atari 410 Tape Recorder
w/manual.....$5.00
(1) Atari 850 Serial Interface
w/850 manual,
Telelink II software,
and 830 modem PS.....$10
(1) Atari 810 Floppy Disk Drive w/
PS (seems to be the PS for it)
and owner's manual
Light goes on, Drive spins up,
light stays on. (seems ok?).....$10
Software Pack #1 (carts)
includes K-Razy Shootout,
Frogger, Ducks Ahoy!,
Story Machine, Linking Logic,
Time bound, Pac-Man, Atari
Basic (can't test these, look
OK though).....$10
Software Pack #2 (Tapes, Manuals)
includes Atari Word Processor
w/ binder and disks/tapes,

touch typing manual, Atari Dos
II manual, 400/800 manual, 825
printer manual, effective
writing tape, juggles
rainbow tape.....$5.00

OR, take it all for $50 plus shipping.

Thanks,
Johnny5!

Multple execution units? Long pipelines? You are aware, I assume, that the Atari 800XL uses a 6502 CPU, and you should consider yourself lucky that you have THREE 8 BIT REGISTERS to work with; only one of which can be pushed or popped (unless you use a 65c02).

3824. Getting .ATR files to work with XL-it

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-14 00:00:00 UTC
From: ramsmich@cwis.isu.edu
Message-ID: <56h16r$98f@cwis.isu.edu>
Source record: 78737

I can't seem to get these things to work. I have managed to get to the point where I can look at the directory of a .ATR file on a virtual D2: from DOS but when I try to binary load them I get an error-164. After error-170 (File not found) my memory is rather hazy on error codes... Please pardon if this has been answered before as I just discovered the existence of 8-bit emulators and the FAQ seemed to focus on .XFD files (which seem to work well). Any help would be appreciated.

1. Win95 makes your HDD do more than it needs to... mind you the average HDD (that is one of GOOD quality and standards) should last forever and if your HDD is doing alot of access then simply increase your memory cache in Netscape.

2. Javascript is active AFTER the page is loaded so you always know when the page is done loading (the status bar says "Status: Done").

3. Not if the code is written correctly it isn't...

You'd have to have DOS in the disk image and rename PENGO.EXE to
autorun.sys. This will auto run the program. However, it is probably
better to have multiple games in the image file with a menu/loader and
DOS. The other way is, at the DUP.SYS menu, use L then D1:PENGO.EXE.
This should also run the program.

Error 164 is a bad file. Either the file is incomplete, making it look
bad or there is something wrong with the image data at some part of the
file. 164 has 2 meanings, 1) bad file, it can't be executed or
something doesn't match that DOS is looking for to transfer the file in
sequence. 2) the file is write protected when you are trying to
overwrite or delete it. Try downloading the file again from a different
archive or recreating the .XFD/.ATR disk image from scratch.
Some programs will only run on specific versions of the OS (800 or
XL or 130XE), but you're not even getting this far with this file.

You need a DOS to load the program.

E.g. atari -nobasic dos25.xfd pengo.atr

Cross-posted to: rec.games.video.marketplace,rec.games.video.classic,rec.games.video.atari,comp.sys.atari.st.tech,comp.sys.atari.advocacy,comp.sys.atari.8bit,alt.atari-jaguar.discussion

Hi,

I have several accumulated Atari items that I'd like to sell.
The reason is not only growing disenchantment with the
support of Atari products by not only the 3rd party developers,
but also a seemingly loyal secondary and primary retail market.
I just can't make the things do what I need them to do anymore.
But, I guess my lose is your gain. I have 8-bits, Jaguar stuff,
ST stuff, and just some other stuff and remember: THE PRICES ARE
NOT CUT IN STONE...if you have an ideal price (not free!) then we can talk.
All items work as of Friday at 8:00 in the morning!
Shipping is extra.

ST stuff:
Whoever buys these will get half of my software collection
including a ram disky thing from ANTIC, ST Word, etc. Quite a deal
at no cost to you.

1040STf works perfect and is a cosmetic 9.0! Disk drive perfect, etc.
Includes working mouse and some docs $50

520 ST upgraded to 1 meg...you know the story! Includes mouse and
some docs $40

SF314 (2) disk drives with cables and docs and connection cords $25 each

SC1224 (?) the colour monitor with box. No burn-in works well.
I've never had a problem with it. Docs included. $45

SC124 (?) Mono high res monitor. No docs or box but still works
like a gem. $35

SF204 HDD 20 meg (can you dig it?) hard disk drive. Works well
comes with all software preloaded to make it go once attached to
your Atari computer. $50 (I paid $90 :-()

8-bit computers. As above, all work well and are cosmetically
near mint...at any rate they have been well maintained. All
items come with cords and power supplies, and some come with the
original docs and boxes.

400 you know the story. Includes docs for 400/800. Can I
pay you to tow it away. Cosmetically, this is about as perfect as they come.
$ 20

800XL works nice, just not my cup of tea. Even comes with original box...
hey, it's America! $40

65xe works well. comes with original box. I;'ll include the docs
if I can find them in my closet. $40

130xe How can Toad charge $100 for these things? No box but looks
and works like day 1. $50

1050 disk drives. Nothing fancy, but power supply included. One of
them come with a box, the other...does not! $45 each

835 modem...viva 300 baud! perfect condition! $15

I also have some carts for the 8-bit like Assembly Editor,
BASIC, and some games. Will include with first purchase for
$2 each.

2600 works well but no power supply or docs. Several games.
$15

Jaguar game console plus 3 controllers. All cables, cords, etc.
two controllers are the regular black ones and the other is
a rare prototype grey one with blue buttons (available separately
for $25). I'll includew with the purchase of the Jag several carts like
Alien Vs. Predator, Checkered Flag, Power Drvie Rally, and...CYBERMORPH!
Jag comes with box and most game come with boxes...not all mind you.
whole package...minue proto controller $60

That's all...thanks for looking!

karl.

and indus supplied word proccessor docs.

can anyone help ??
is DOS XL a good dos for atari use ?

3836. sio2pc for ST

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-15 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <56iogm$g8s@usenetp1.news.prodigy.com>
Source record: 78749

Just curious here. Are you looking for a connection between the 130XE and the ST, or the ST and a PC? I'd think the standard SIO2PC would work to connect an ST to an XE with only new ST software required to emulate the 8 bit drives. I don't understand though if you're asking to connect the ST to a PC with something special, since they both use pretty much the same 720K floppy format and both have RS232 ports that could use a standard null modem. Am I lost?

What do you expect? No one supports Atari users but themeselves alone, along with Apple II users, Commodore Users, Adam users, TI/99, and a whole host of others......the Atari is not unique. "COMPUTER"="IBM or CLONE" is reality now.

: Jaguar game console plus 3 controllers. All cables, cords, etc.
: two controllers are the regular black ones and the other is
: a rare prototype grey one with blue buttons (available separately
^^

This is nonsense! If it is a "Rare Prototype", I have 4 of them. The Blue button Jaguar Controller is merely the controller included with NEWER Jaguars.....there is one with each new Jaguar you buy, and Atari sent me one for "free" when I bought my Jaguar, which had "regular" black buttons.

: for $25). I'll includew with the purchase of the Jag several carts like

```
================================================================================

SSSS tt lll lll
SS SS tt ll ll
SS tttttt eeee ll ll aaaa
SSSS tt ee ee ll ll aa
SS tt eeeeee ll ll aaaaa
SS SS tt ee ll ll aa aa
SSSS ttt eeeee llll llll aaaaa

Version 0.5 for Linux, MS-DOS, OS/2, Power Macs, Unix and Windows

================================================================================
A Bradford W. Mott production in association with Aaron Giles,
Seunghee Lee, Jeff Miller, Darrell Spice Jr., and Keith Wilkins
================================================================================

Stella is a portable emulator of the old Atari 2600 video-game console
written in C++. It is still a work-in-progress, however, you can play
most Atari 2600 games with this release. There are five distributions:

* Binary distribution for Linux (stella-0.5-linux.tar.z)

* Binary distribution for MS-DOS (stella05.exe)

* Binary distribution for OS/2 (stella-0.5-os2.zip)

* Binary distribution for Power Macs (stella-0.5-mac.hqx)

* Binary distribution for Windows 95 & NT (stella-0.5-win32.zip)

* Source code distribution for Unix & MS-DOS (stella-0.5-src.tar.z)

There are two 2600 ROM images (.BIN files) included with each of these
distributions. One of them is a very simple test program, TEST.BIN, and
the other one, ELK.BIN, is a playable prototype of a game called "Elk Attack"
by Mark R. Hahn (see elk.doc for more information). BEYOND THESE TWO
FILES NONE OF THESE DISTRIBUTIONS CONTAIN ANY 2600 ROM IMAGES (.BIN FILES)
AND PLEASE DON'T WRITE ASKING FOR ROMS BECAUSE THEY'RE COPYRIGHTED!
If you own any of the Atari 2600 Action Packs by Activision you can use
the ROM images from it with Stella. There are several property files
(.VCS files) included with each distribution, however, you cannot play
a game with just a property file you must also have the corresponding
ROM image file.

New in this Version
===================
```

* Faster than version 0.4 for most games

* Sound support has been added for most systems

* Several games are now working: Haunted House, Frogger, Defender II

* New cartridge bank switching methods added: F8SC, FASC (CBS RAM+)

Supported Systems
=================

The following systems are currently supported:

* Linux (SVGALIB, X windows)

* MS-DOS

* OS/2

* Power Macs

* Unix (HP/UX, Solaris, etc...)

* Windows 95 & NT

Distribution Site
=================

The Stella distributions can be obtained from the Stella home page at:

http://www4.ncsu.edu/~bwmott/www/2600

If for some reason you are unable to connect to this page please try again
later. Sometimes the AFS sever goes down and the HTTP server can't access
my home directory :-)

Acknowledgements
================

The following people have had a big part in bringing version 0.5 to you:

Ron Fries - Author of the TiaSound library
Aaron Giles - Maintained the Power Macintosh version
Jeff Miller - Maintained the Windows version
Bradford Mott - Maintained the core code, Linux SVGA version and X version
Darrell Spice Jr. - Maintained the OS/2 version
Keith Wilkins - Maintained the MS-DOS version

Theorectially, one could use the same cable and write software on the ST
side. But maybe SIO2PC uses ports that aren't used on the ST, because
it's not exactly like the on eon the PC.

The closest you can get is to use a Xformer cable on a 8-bit drive and use
ST Xformer.

If someone knows where I can still get this, then *please* let me know. :)

I'm looking for an Atari User named Sloopy Malibu. He's been an Atarian
for a Long time. He even used to write articles for Atari Magazines. I
Remember one in AIM Magazine. I have some unfinished Business with Him.
We were in the middle of a Trade and after I received my part of the
Trade, I lost touch with him. And I still need to complete the Trade.
If anyone can help... An E-Mail Address, a Phone Number. Direct any and
all Replies through E-Mail to: bensmith@teleport.com

==Thanx==

3848. Problems with my 130xe

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-16 00:00:00 UTC
From: an6@pgstumail.pg.cc.md.us
Message-ID: <848105751.27142@dejanews.com>
Source record: 78759

I am having a serious problem with my 130xe. It seems that when I turned it on, nothing shows on the screen, the power is working, but nothing else. I tried my two adapters on the 130xe, same type. The adapters work for my 800xl, but not for the 130xe, what could be the problem and how can I fix it.

Thanks for the updates - keep 'em coming!

Oscar

########

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was
checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

An asterisk (*) next to the board's phone number indicates that entry has
been updated since the last version of this list.

What would be the benefit of having multiple computers share the same ROM space? They couldn't write to it, so it wouldn't allow any kind of communication between them.

3857. VisiCalc unprotect

I got this info (know known to be erroneous) from a FIOD sysop.
I downloaded a listing of available conferences from another BBS
and I noticed one named ATARI instead of separate 8-Bit and ST
conferences. The description said "Everything about Atari" and
showed Larry Black as the moderator. You can see how I assumed
some things. Of course, when you "assume" things...

I am looking for Lord of Karma, a text adventure from Avalon Hill Microcomputer games. Please UUEncode this file and mail it to me if you have it. I have been looking for this program for years, ever since I had it for the PET.

Getting my Atari a little while later, I still could not find it as early as 1982-83

It WAS written for the Atari 800 though.

I don't have a copy of Visicalc, but if you could send me a `sector
copied' ATR file, (don't worry about the protection), I can try and
Unprotect it for you. I will go through my disks to see if I have a
program that can unprotect it, and if I have one I'll send it to
you...ok?

Atari XE game system, good condition, manuals included.
Atari 800 computer, works, fair condition, has owners guide.
Atari 1050 disk drive, good condition with owners manual.
Atari 410 program recorder, works, fair condition, has owners guide
Atari 1025 printer, good condition, with owners guide and dust cover.
Covox voice master, sound digitizer and playback, speech recognition, with
owners manual diskette and microphone/headset.
3 joysticks, 2 standard Atari 1 aftermarket
Atari remote control joysticks, 2 joysticks and receiver, owners manual
and universal power supply, good condition. (originally designed for 2600
but works good with computers)
2 standard power supplies
1 XEGS power supply
3 books Atari basic, Inside Atari basic, Atari in wonderland.
misc interface cables etc....

The Grey/Blue controller is a a Prototype controller. What do you
mean "NEWER" jags? The ones they just sent out to every store that
are now selling at $50?

By the way, does anybody know if the Cybermorph units they are selling
now are the ORIGINAL ones, with poster inside and original box
with the unreleased games on it?

My thinking was that the 16K address space of the cartridge port would
be seen as the same by all the computers connected in this manner. (I
like my 8-bit, but I'm not really up to speed on the hardware!)

So if I would change a byte in that address space, all the computers
would see the change.

As I recall, visicalc dosent have a protection scheme on the disk. It depends on
ones needing the manual jto use the program, and the manual was so thick,
that copying was damn near as expensive as buying it.

Have the following non-functioning computers FREE to a good home (you pay shipping). None are completely dead, and none have been cannibalized for parts with the exception of one. All are in great cosmetic condition, ie no cracked cases, missing keys, etc. No power cords/supplies. Read on if interested:

HP MODEL 86: Circa 1981 or so, this is one of the first desktop computers HP produced. (I think the 85 was the first). The keyboard has been removed, but it powers up to a cursor. This one has the three Centronics-looking connectors at the rear compared to the single HP IB of the model 86B.

COMMODORE 64: Have two of these, both display garbage instead of the *** Commodore Basic ... start-up screen. Also have a 1541 disk drive which flashes the error light when accessing the disk.

TRS-80 COLOR COMPUTER: Same problem as the Commodores above. 16k and extended BASIC.

ATARI 1010 DATA RECORDER: Looks new. Tape reels don't turn.

DEC LA50 PRINTER: This one may work, but I don't have a 25 pin cable to test it with, so we'll call it broken. The front panel controls work, though (line feed, form feed, on/off line). Small, but heavy.

If you are interested in any, or preferably all, of the above, please e-mail me. I'd hate to throw any of these away, esp. the HP. It's so 70's looking.

It's a little foggy, but I seem to recall a program which would take a
copied VisiCalc disk and both unprotect it and make it run under
SpartaDOS.

There is a way to get messages to and from Fido from the Internet. I'm
not sure if it's uniform across all Fido BBSs.

"Echoes" are message bases, or sigs, within the Fido system.

There is a program like ST/XL Link, which runs on an Atari ST.
With the Sio2PC interface you can let your ST emulate a 1050
diskdrive.

Bo.

3877. Help in identifying cartridge

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-17 00:00:00 UTC
From: Bob Ryan <ryanr@one.net>
Message-ID: <328FDA71.352A@one.net>
Source record: 78690

I recently picked up a bunch of stuff. I need help in identifying a cartridge. It is in a black case and has no label. The inside of the case has Deico Electronics, Sunnyvale CA. embossed on it. The circuit board doesn't have a chip on it, just a small (1.2 in. square) blob of epoxy. It also has Deico Electronics on it.

I've plugged into both the right and left cartridge slots with no luck. One of the 800s in the lot has the "Pill" modification. I am unfamiliar with this mod. I know it copies cartridges to disk, but other than that I've no clue.

Is this cart part of the Pill system? Any help will be appreciated.

Thanks,
-Bob

The grey/blue jag controller is called a Power Pad and was intended
for the Atari STE series of computers which support the Jagpad. The
color scheme matched the color of the STE better than the black one.

A real proto jag stick would be one of the square ones or the one of
the original hack jobs consisting of a 7800 joypad with extra buttons
wired together with a Star Raiders controller for the 2600.

Although, you could argue that the unique nature of page 0 is like getting 256 more registers (Heck, they're just one level removed from X and Y, in some ways).

John Dullea's (jxd230@psu.edu) PC Atari Emulator 1.3 has been released!

New in this version:

.. Better sound, using sound routines instead of samples
.. Works in a W95 DOS window, but the sounds don't play right
.. Player 2 keyboard keys are now I, J, K, and L
.. Partial Starpath Supercharger support
.. Fixed display problems in Space Invaders and Asteroids
.. Much better debugger
.. Support for Video Touch Pad
.. Support for CBS Booster-Grip (e.g. Omega Race)
.. Very small download, since no sound sample file

Find the MS-DOS Binaries at the site below.

regards,
mattconte

3886. Lots of stuff for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-18 00:00:00 UTC
From: "host name"@earthlink.net
Message-ID: <56ovgf$jsr@kirin.wwa.com>
Source record: 78696

I have the following for sale

2 Atari 800's
1 1200xl
1 600 xl
1 800xl
2 810's
1 Percom
2 850's
1 sx212
lots of joysticks
Axlon 128 and 32k modules
mpp 300baud modem with cart
1 color and one green monitor

All of the above work and have power supplies and SIO's ets.

I have tons of books (Most of the important ones) Lots of software. Too much to list (I did it once, and lost the file)

Carts:
2 basic
centipede
star raiders
defender
pac man

lots of antic and analog disks too...

Can't stop typing! Allright, thats it, promise.

I am looking for 175 plus shipping.

Anybody out there looking to sell their used SIO2PC cable? Maybe you're moving or looking to make some quick money. I will pay you for your cable or possibly be willing to negotiate some sort of trade. Please reply if interested. Reasonable offers only, please. I will buy a new one only if I absolutely have to.

Did this emulator have STEREO? It is not a joke. Second POKEY is situated at
the addresses: d210..d21f. Many computers are upgrated to STEREO, but I do
not know any STEREO emulator. I think that it is simply to make on emulator,
because the second POKEY don't generate the IRQ interruptions. From now will
be more and more STEREO musics, because i wrote new program:
Theta Music Composer. It is first (I think) program for STEREO computers.
You can download it from serwer yoshi.meil.pw.edu.pl subdirectory atari8bit.
Version 1.00 have only polish instruction, but the next version will be have
an english instruction.

Sorry, but maybe you could upgrade your XL-it? I think that it is very good emulator (only on this emulator works the best demo on atari XL/XE: AssKicker). But not works (for example) my zin: Energy. Why? Did your emulator not emulate my SIO routine? Energy turns off ROM after loading first 3 sectors.

Hi,

The sale has gone quite well, but there are a few things left to sell, and now
I'm pulling out all the stops!

Buy my entire collection of 8-bit stuff for $175 plus shipping!
This includes all power supplies and necessary connectors
to make the machine do what it needs to do! All items are in
perfect working order!

-1 65 xe
-1 130 xe
-1 400
-1 800xl
-2 1050 disk drives
-1 835 modem
-1 xm301 modem
-1 410 tape recorder...how do you make those damn things work?
-various cassettes and disks and carts to make the 8-bit go!
-FREE...2600 with carts to purchaser!
-anything else I can dream up!

I can't do any better than this...if you think the
prices are too high, please try to find half of this stuff
at this price. Additionally, for shipping cost, with purchase,
I will toss in a colour monitor and connecting cable to
attach the 65/130 xe to it...these cables are a pain in the
ass to find.

References upon request!

thanks.

karl.

as i am sort of new to this group,
i have a question regarding software
available through yogi's and umich.
i have a real 800, and 1200xl. before
i go through the trouble of building
a sio2pc cable, are the software - cracked
or otherwise the same that used to be available.
in otherwords, are these the 'real mccoys'?
do they have the same graphics say in donkey kong
as the cartridge did?

i'm so glad to find out atari is alive and well on the net.
my first machine was an 800.

cheers

>are now selling at $50?

About the Grey/Blue controller being a Prototype controller, EGM magazine did an interview with people from Atari awhile back(when they still covered the Jag) and the Grey/Blue color scheme was one of the TEST colors they were using. They had a couple different color schemes they were working on, but the Black/Red won!! They have a picture of an Atari employee (I can't remember who) that had a Grey/Blue Jaguar unit with the Grey/Blue controller.

3901. FUJIBOINK for 8-bit atari

Newsgroup: comp.sys.atari.8bit

Ummm... I think you have the 2600 confused with some other computer.
The 2600 didn't have a POKEY, and it sure as hell didn't *ever* have
anything approaching stereo.

Or are you trying to tell us that you've somehow soldered two POKEYs
onto your 2600 board in such a way that they can be addressed by the
CPU and written a cart image for it?

3903. Infocoms and other various SW for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-18 00:00:00 UTC
From: slackey@slackey-sun.lightstream.com
Message-ID: <SLACKEY.96Nov18163008@slackey-sun.lightstream.com>
Source record: 78713

Well, folks, here it is... my full Atari software collection for sale.
Games and a few utilities like Print Shop, Newsroom and Visicalc.
Except for my carts - I'm keeping them, with my hardware. I guess I
could sell my disk drives, too, then, but NO!

Many are still in orig. packaging.

Prices are negotiable. If you take a lot, they're even MORE negotiable.

Infocom Text adventures. Except for Sorcerer, which is in the original
(creative) packaging, they're all in the bookshelf-style packaging.
"Hint" means I have the hint book. To my knowledge, all the original
items are present.

Price is $10 for each with hint book, $7 without.

Comedy sci-fi:
Leather Goddesses of Phobos Hint
Hitchhiker's Guide to the Galaxy Hint
Planetfall
(don't have Stationfall)

Sci-fi:
Starcross Hint
Suspended Hint

Entertainment:
Ballyhoo Hint
Hollywood Hijynx Hint includes Bureaucracy

Fantasy:
Moonmist Hint
Wishbringer Hint

Enchanter Trilogy:
Enchanter
Sorcerer (orig. packaging)
Spellbreaker Hint

Children's:
Seastalker Hint

Exploring:
Infidel Hint

Mystery:
Cutthroats Hint

Witness Hint
Deadline Hint

Horror:
Lurking Horror Hint includes Stationfall

Romantic:
Plundered Hearts

Other publisher, disks boxed with manual. (I use the term "boxed"
loosely - some didn't come in a box, but in an opening cardboard or
vinyl carrier, like a book.) Pricing listed is a "starting price."
Once again take a bunch and we'll negotiate the total.

AR - Arcade; STR - Strategy; UTL - Utility; WP - Word Processor.

$2 Caverns of Mars AR Atari
$2 Agent USA STR Scholastic
$2 Last V8 AR Mastertronic
$10 Print Shop & Print Shop Companion UTL Broderbund
(Just the Companion box)
$5 Golden Oldies - Adventure, Eliza, Life, Pong
$3 Master of the Lamps AR Activision
$2 Run For It Weekly Reader Family Software
$3 Cut & Paste WP Electronic Arts
$7 Movie Maker Interactive Picture Systems
$2 Murder on the Zinderneuf STR Electronic Arts

: The Grey/Blue controller is a a Prototype controller. What do you
: mean "NEWER" jags? The ones they just sent out to every store that
: are now selling at $50?

Yes, the units which are selling dirt cheap. They changed the buttons
to a blue colour. I don't think you have a prototype, unless you are
talking about something which is totally different from what I am.

: By the way, does anybody know if the Cybermorph units they are selling
: now are the ORIGINAL ones, with poster inside and original box
: with the unreleased games on it?

There are TWO sorts of Cybermorph....one is in a BLACK case, and the
other is in a GREY case. I figure that the Jaguar was going to be the
same black as the 7800 system once....hence the black Cybermorph...
I personally think the unit would have been a lot sharper looking had
they gone this route.

3906. Help with memory address for 130XE

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-18 00:00:00 UTC
From: allentc@eng.auburn.edu
Message-ID: <56qrai$f2k@ultranews.duc.auburn.edu>
Source record: 78716

Does anyone know where to find the exact address of each memory part
discussed below?? I am looking for a free 8 bytes or so to wire
in some D/a converters and I'm new to atari basic programming.
I know this:
(quoted)

$200-$47f
This area is used for operating system database variables. Parts which are not used in some particular programs, such as the cassette buffer or printer buffer, may then be used for other purposes. See the O.S. equate listing for these locations.

Thank you,
Terry

Regular Atari joysticks tend to wear out very quickly. The switches
were nothing more than pop up buttons. I haven't seen any new Atari
compatible sticks in forever. I got hard up enough that I whipped out
the soldering iron and modified some Nintendo compatible sticks (they
were Quickshots) ....worked pretty well.

I believe a sega genesis controller will work with no modifications on
a 2600. I've been using one on my Atari 7800 with no modifications
although its good only on games that require one fire button (which is
all 2600 games).
If you want to use a genesis controller on a 7800 with 7800 games
that require 2 fire buttons there is a simple mod you make to the
controller.

Well, glad to hear another "ex" ATARIan has come back to life.....
Yes, the software you'll find there is the same as you would have if
you bought the game- except that there isn't any protection.
DEFINATELY build the SIO2PC cable, you'll enjoy your ATARI even
more with this! I have, and it's excellent.... up to 16mb disks, and
heaps faster loading times (3 times faster than US 1050), Direct file
transfer to and from the PC (better off using the APE system for
that), Printer redirection, lots of other things to make your ATARI
look like a real computer again......
Have fun.

Hi Richard,

I have a copy of the Atari Explorer issue (I believe it was Summer 1985) which had an ad on the back cover titled: A New Edge On Computing which showed
what some of the new Atari peripherals were gonna be. I have all of the items that were never released such as the XC1411 color monitor (excellent video!) and the XTC201 color thermal printer, no power supply for it sadly :(

I'll see if a can make an image of the issue and email it to you.

Curt

Currently I'm working on a Web Site called just that:

The ATARI VAPORWARE Site.

I currently have:

2 1450XLDs, 3 1400Xl's, 1 1090XL with 64KMR expansion card, 1 1064 Memory module, 1 Atari 815, 1 Atari XC1411, 1 Atari ATC201, 1 Atari 800-D, 1 Atari 5100 (aka 5200jr), 2 Atari 6402A prototype motherboards (apparently a 3rd generation version of the 1450XLD with disk controller onboard), 3 Atari 2600 S-100 Bus boards, 1 Atari 2800, 2 Atari STylus STPAD touch screen computers, 2 Atari Touch Me games, 2 Atari "ERIC" Laserdisc video systems.

I'm currently working getting the following: 2 Atari ABC 386sx Laptops, 1 Atari ST Book laptop, 1 Atari PC-5 IBM Clone, 1 Atari 80 Column video card for the 1090XL,
1 Atari 1200 (not 1200xl), and a few other odds and ends.

I plan on taking photo's of all items from different angles and inside views as well with as much data as possible. Looking around the new year, I'll post the URL when it goes up.

Curt

You should look for a copy of "Mapping The Atari" by Ian Chadwick,
published by Compute Books. Without checking the book, I know that the
cassette buffer is $400 to $47f, and there is another unused block of
memory from $600-6ff. The Atari's I/O chips use address space from
$D000-D7ff, but a lot of that space is unused. I've heard it's possible
to piggyback a second PIA chip onto the existing one.

Robert,
Simply download the .exe files and you can then run them directly
on your real Atari. Some of these file will only run on an 800 some
only on XL/XE versions and some specifically on the 130XE. Check the
Atari FAQs for more info on running binary files from DOS.

>macgyve3@ix.netcom.com

That's because the Atari formats the disk differently than you PC. It's like the difference between VHS and Beta video tape format. The tape is the same, but the information on the tape is written completely differently. There is a program (AT2IBM.COM) which will allow your PC to read double sided double density (NOT 1050 enhanced density) directoryes, but that's all it does. I suggest you 1) build the SIO2PC cable and get the associated software (availavle at many archive sites) and 2) get at least one version of Atari DOS such as 2.5, MyDOS, SpartaDOS, etc. This second part will allow you to format disks on your 8-bit drives. I hope this helps.

Uh, do you guys know that the original poster was talking about the change
in color of the fire buttons, not the numeric keypad buttons?

The controllers in question are *light* grey with *very* blue buttons.

Hint: The controllers are the same light grey as the Atari Falcon
computer.

Hint #2: The Atari Falcon has a 15-pin joypad controller port.

I think these things are rare, but I've heard enough reportings of them to
make me think they were a small production run, and not a proto.

>
> --
> David A. Paterson
> --

Maybe, but there are two considerations here:

1) All page 0 addresses (save one or two) are generally in use by the
OS/debugger, so you don't really get to make use of them in
well-behaving user programs.

2) You can't perform half the the CPU's register operations on page
zero.

So, is page zero useful? Yes. Is it functional enough to use as
additional registers? Generally, no.

This all depends on what your ATARI disk drives are.
If they are 1050 drives that are capable of double density, I have
found a utility that can READ & WRITE ATARI disks on the PC (it must
be a 5.25 of course).It is limited to only tranferring files, and
cannot write a DOS bootsector. But, if you want some more help with
this just email me, and I'll try do do what I can....

Hi,

Can someone post or e-mail some directions on installing the Happy 1050 Controller Card in a Happy 1050?

I have a unused controller that I want to install into my Happy drive. But don't know where everything goes.

Thanks

Send E-Mail to phantomm@harold.eastky.com

3932. WTB: old Atari 8-bit games on disk

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-19 00:00:00 UTC
From: magnus@x-net.net
Message-ID: <3291f901.8022403@206.74.59.105>
Source record: 78645

I'm looking for old software games for the Atari 8-bit computer.

I do not want carts.

I am esp. interested in old Infocom games, Electronic Arts games, and
any Ultima games.

Games must include box, documentation, disks, and anything else
original to it.

I will make exceptions in the case of any Ultima games.

Thanks!

magnus@x-net.net

3933. 0.16 xl-it sound problem, help!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-19 00:00:00 UTC
From: Keatah <Keatah@worldnet.att.net>
Message-ID: <3292707D.14D9@worldnet.att.net>
Source record: 78646

I'm having a problem getting sound from the xl-it emulator, version 0.16..

I've tried nearly every possible setting and combination of drivers. I'm running this on a dos6.2 system, sb16 (original ct1730!) card. have tried it also under win95 and win31 for the hell of it. Its the ONLY app that I can't get sound out of.

Help!!

Keith

>
> Is this cart part of the Pill system? Any help will be appreciated.

Your guess is probably correct. I don't have a "pill" myself, but I can
tell you how they work. The disk image of a copied cartridge is loaded
into cartridge memory. Then a device (probably the one you have)
effectively 'write protects' the cartridge memory.

Did you get any software with this?

3935. FOR SALE

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-19 00:00:00 UTC
From: bx557@torfree.net
Message-ID: <E14z96.265.0.bloor@torfree.net>

3938. Atari Schematics

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-19 00:00:00 UTC
From: Barry Gordon <bgordon@ecst.csuchico.edu>
Message-ID: <Pine.HPP.3.95.961119215817.11143A-100000@pathogen.ecst.csuchico.edu>
Source record: 78651

This is a shot in the dark, but does anybody have any REAL schematics for the Atari XL or XE computers?

I am NOT talking about aftermarket drawings like in the SAMS manuals (I already have those). I'm looking for some REAL schematics, possibly with more circuit information than is available on an aftermarket drawing.

Any good, informative hardware documentation would also be helpful. I already have the Technical Reference on the 800. I'm looking for XL/XE specific information. Wasn't there a Technical Reference on the XL? Was one ever published (or even unpublished) for the XE?

I'm considering taking on a large hardware project.

3939. FOR SALE

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-20 00:00:00 UTC
From: "host name"@earthlink.net

helmet,

give these two site a try. one of them has a parts list with the actual
parts numbers from radio shack.

the other gives the pin-outs for the sio.

> now screwed up? It sounds perfect in 1.2, but 1.3 has it somewhat
> scrooged.

hmm... the sound method is =completely= different in v1.3... previously
john (jxd230@psu.edu) used sounds sampled from an atari 2600... this
yielded results about the same as the atari action packs- the sounds seem
familiar, but you know they aren't the same as what they were in your
basement 15 years ago... in the new version, the emulator relies on ron
fries' tiasound emulation library to generate the sounds the same way that
the TIA chip did in the real 2600... if you tweak it right, the sounds
sound really good... unfortunately, slow machines, short sounds, and a
host of other things can make some things sound not very prettyhappy. john
may build a version that uses the huge sample file again, but this time use
the samples from tiasound so that you can get the best of both worlds...

late,
matt.conte

The most common 140k mini-floppy format that I know of was the Apple II
GCR format. Technically, it's not double density; the number of flux
transitions matches that of regular single-density 5.25" FM floppies,
such as the SA390 and SA400.

In article <328AAC7A.4581@sinewave.com>, sadu@sinewave.com wrote:

> Ah yes, cassette loading. Makes a 140K Floppy look good!

Look, you had 140k on a floppy. That was one of those new fangled "Double Density" things. I built an interface for a 100k floppy (256 bytes/sector, 10 sectors/track, 40 tracks) but that was on the 40 track drives. The original SA400's only had 35 tracks, so they were only 89.6k floppies. Nowdays that is smaller than the cache memory INSIDE some CPU chips. Times have changed...

>such as the SA390 and SA400.
>
>Tim. (shoppa@triumf.ca)

The Atari 1050 floppy drive used MFM to get 140K on a disk: 128
bytes/sector * 26 sectors * 40 tracks. There were third-party kits to
modify the drive for "true" double density: 256 bytes * 18 sectors * 40
tracks, total of 180k per disk.

3957. FS/T: Atari 8-bit computer items [11/20/96]

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-20 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <56ufsr$be7@dfw-ixnews4.ix.netcom.com>
Source record: 78657

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 11/18/96

NOTE: There are currently 1010 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 9.50 Delta Drawing (Spinnaker)
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers -- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers (14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3 (100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog (32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they are marked) you will have the option of buying a BRAND NEW RF switchbox for $5 that is virtually identical to one sold at Radio Shack for $7, plus tax. It allows for the connection of both 300 OHM and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

To reserve any item(s) listed here, please contact me (please read
the SALES CONDITIONS section first). Thank you!

Source record: 78663

I have received 3-5 responces on these 2 games and I believe there is a misunderstanding about them (maybe on my part). The 2 games I am looking for are actually commercial software. Air Strike was made by English Software and I forget who made Rear Guard (I'll have to look in one of my old COMPUTE! Magazines for that one). If anyone has these games please e-mail me.

From: Richard Forester <forester@blarg.net>
Message-ID: <01bbd707$971ca380$3b9072ce@forester>
Source record: 78666

Hi. I just recently got an Atari 800 after not having one for ages.
Anyway, I was wondering if anyone can recommend a good book preferably one
with all the peeks and pokes listed as well as BASIC error codes.

Also, I have one question that I hope someone can answer. I wrote a
program way back when and didn't document it well. I used GRAPHICS 28 in a
line but when the program gets to that line I get an ERROR - 145. Perhaps
I wrote this program with an XL or XE.

Thanks,
Richard

In a totally irrelevant followup post :), I'd like to add that a couple years back, I converted the Atari 8-bit font to a the char-based bitmap format used by the Sega Genesis. Our beloved font appeared (with a nice drop shadow added) in the following Sega Genesis games that I worked on:

Dinosaurs for Hire
Eternal Champions
Star Wars 32X

It's currently the system font in a Saturn and Playstation game that I'm working on, so we'll see if Atari's little font reaches the 32-bit platforms... :)

Only the bottom half of page 0 is used by the OS; from $80 to $FF is free. But if you're using Atari's ASM/ED cart, then you're already a glutton for punishment. Get Mac/65!

3969. 800XL Memory Problem?

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-21 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <848706846_OASIS_@pcc-uky.campus.mci.net>
Source record: 78519

Well, I've been slowly putting an 800XL system back together (its the very 1st! computer I ever owned) and I've got a problem. I just bought Ultima I from Bravo-Sierra and when I try to run the game, it goes so far then gives me a 3-part error message...

ROM Cartridge Present

Less than 48k available

Bad memory at address A0008 (I think thats the address)

Any ideas? Is this something that I can fix in hardware or is it possible that there is a problem with the Ultima I disk? Thanks in advance for any info...! :)

I once modified a standard one button joystick to be a two button 7800 controller when my sticks wore out. Only two resistors and a Normally Open pushbutton need to be added. Unfortunately, my 7800 is gone now and I lost the trace I made of the 7800 sticks. Anybody got the schematics to one of those laying around?

Date: 1996-11-21 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <57085h$l9j@freenet-news.carleton.ca>
Source record: 78585

If you have experienced lockups with Ape 1.07-1.09 (hard crashes in which the machine will not longer respond, even to Ctrl-Alt-Delete) please contact me. (also present in 1.10 shareware)

I need some people who are having this problem to test a new version of APE that hopefully fixes this situation for good.

Persons waiting for the registered versions of 1.10 will get them as soon as I can confirm the problem is fixed (and does not create any additional problems).

Thanks everyone.

Steve

GULP! <removes foot from mouth>
Whoops... I guess I was just a little to harsh there...
<drops to knees and begs forgiveness>

Sorry, I should have realized then that us ATARIan's need a little
humor too. After posting the message I thought about it, and really
if we ATARIan's can't help each other, Who can?
Oh, the name CyberSteve? yeh I know it's pretty lame, but, I figure
it's one that nobody is going to forget :)

(okay I didn't see the smiley there until you mentioned it, my
newsreader has a very small font)

3978. Screen Noise on 800

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-21 00:00:00 UTC
From: Richard Forester <forester@blarg.net>
Message-ID: <01bbd771$107ca0e0$269072ce@forester>
Source record: 78588

Hi everyone,

I have a little problem with my Atari 800... when it's on, after a while the screen noise gets so bad you can hardly see anything. A thump or two on the machine will clear it up. Although this works ok I would rather fix whats really wrong. Anyone else have/had this problem? Any info is appreciated.

Thanks!
Richard

>I wrote this program with an XL or XE.
>
My list of error codes (from the Mydos docs) doesn't show an Error 145,
but error 146 is "Function not provided by handler (OS ROMS)". I think
you're right about that graphic mode requiring an XL or XE.

3980. WTB: old games on disk

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-21 00:00:00 UTC
From: magnus@x-net.net
Message-ID: <3293e7ea.39224423@206.74.59.105>
Source record: 78590

I'm looking for old software games for the Atari 8-bit or ST computer.

I do not want carts.

I am esp. interested in old Infocom games, Electronic Arts games, and
any Ultima games.

Games must include box, documentation, disks, and anything else
original to it.

I will make exceptions in the case of any Ultima games.

Thanks!

magnus@x-net.net

I have the following items for sale:

1 Atari 7800 Game System in original box, with one joystick, RF switch,
power supply and Pole Position II cartridge. $15.00

Atari 7800 Carts:

Karateka $2.50
Centipede $2.50

Atari 2600 Carts:

Football $2.00
Air Sea Battle $2.00
Space Invaders $2.00
Pitfall $2.00

1 Star Micronics Gemini 10 dot-matrix printer. In bad shape but works OK.
Removable tractor. Uses typewriter ribbon. Make offer.

1 Zoom Internal 24/96 Faxmodem. For PC. $12.00
1 1200 baud internal modem for PC $7.50

All prices are in US dollars. You pay shipping. Payments may be made by money
order only please. I will ship upon receipt of payment. Minimum order: $10.
Email bx557@freenet.toronto.on.ca or an422@dayton.wright.edu.

Justin

Perhaps
>I wrote this program with an XL or XE.
>
>Thanks,
>Richard

I'd recommend these:
Your Atari Computer, a guide to the 400/800 (XL/XE) edition by Lon
Poole.
Mapping The Atari, Compute Books by Ian Chadwick
De Re Atari from Atari
400/800 Harware manual from Atari (if you want detailed hardware
info and system source code)
Compute Books Graphics 1&2
Compute Books Basic programming 1,2 and 3 (especially 3)

With these as references, you shouldn't need any other sources.
However, for programming, you'll need the language's manual and maybe
some other associated books, but these should be the core of your
library. I wouldn't know what to do without these!

I wrote E-Mail to Emulators, Inc., asking if they even received my order.

The response was that they got a lot of orders and that anything that
wasn't shipped by 11/15 would be shipped after the first of the year.

Either they're swamped or don't want to be bothered checking up on things.

Hang in there...

I have both the SAMs and Atari schematics for some of the 8-bit
computers. In SAMs I vave the 800XL and 130XE. In the Atari produced, I
have the 400,800, 800XL and 130XE. I happen to prefer the SAMs
versions. They seem to be more detailed. SAMs also has the pinouts for
all of the chips. The Atar hardware manual only has some. I suggest you
aquire both versions for the best documentation, but the SAMs will be
sufficient for most mods and other documentation.

I've never had a lockup problem, but then again, I've never been able to go beyond the startup screen, since it won't automatically kick into MONOCHROME mode on my MONOCHROME SYSTEM. ...hint, hint, :)

4003. Atari book recommendations

Terry: If you want to add a hardware address (an address that accesses hardware instesd of RAM), you need to use one of the unused address
spaces, not RAM space. You could de-gate memory for a hardware address, but then the checksum would not work, programs would probably croak and
other unnice things. Try up in $D1xx or $D6xx-$D7xx. These are free on a standard Atari.

If it is a disk-based game, have you pressed the option key before
turning on the computer?

4008. what's the best 800 emu for an IBM?

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-21 00:00:00 UTC
From: biverson@ea.com
Message-ID: <5728tj$ej6@ftp1.ea.com>
Source record: 78618

I'm looking for a good Atari 800 emulator for the IBM PC.
It would be great if it was Win 95, but DOS is okay too.
I've tried a couple emulators in their shareware versions,
but each one seems to have problems running some
stuff...So, my question is, which emulator runs the
most software? Do the registered versions run any
better than the shareware versions?

Thanks for any info...

4009. SIO2PC FOR ST 2

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-22 00:00:00 UTC
From: d0052356@worldnet.fr
Message-ID: <572s7f$dks@news.sct.fr>
Source record: 78522

Well,
I must admist that it was not clear!
What I want to do is:
store my little collection of ST programs on the PC's hard-disk
and of course, I want to have the same easy use that I have
with SIOP2PC.
Thanks for your ask Robert, now I know that it's not
as difficult as I was thinking.
Thanks Bo, but it's for the PC... Well, another use for the 130,
why not?...

Maybe someone could tell me how to do to transfert
the Atari ST diks onto the PC? (This is as easy as copying
the ST disk onto the PC with only a null-modem cable
and a ST copier??? I can't believe that is so simple!!!)

All help is more than welcome. Thanks in advance.

4010. Diamond Gos

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-22 00:00:00 UTC
From: phantomm@harold.eastky.com
Message-ID: <572tub$mm8@netnews.mis.net>
Source record: 78523

Does anyone know what the last version of the Diamond GOS cartridge was?
And is the ROM chip still available?

I had Diamond Gos setup on a hard drive, years ago. But I think there is
a bug in the version I have. I would like to upgrade my cart. to the
last version of the ROM chip if possible.

I also still need some help installing that Happy Controller Card.

4011. MIO and printers

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-22 00:00:00 UTC
From: phantomm@harold.eastky.com
Message-ID: <5730ci$nvb@netnews.mis.net>
Source record: 78524

Here is something that might interest MIO owners. You can use a Atari
SIO type printer even if you have another printer connected to the MIO
parallel printer port, by selecting Printer Port None in the MIO config.
menu. This way you can easily switch between 2 different printers.
I don't think this was mentioned in the MIO manual. But it does work.

Also if you have a dead MIO or one thats misbehaving, check that ribbon
cable from the MIO to the computer. That is one of the common trouble
spots. And it's easy to replace.
Phantomm

Avoid junk email. Use an unlisted comm port address!

Hi All,

Does anyone know, what had happend to the xl-it website
at http://www.htw.uni-sb.de/people/mgietzen/atari/xl-it.html ?

Their webserver seemed to be downed for the pass month!

I have the xl-it 1.4 version, but would very much like to get the 1.6
version,
anyone out there knows another site where I can get the 1.6 version ?

Thanks!

"Mapping the ATARI" would probably be the first choice for finding out
all those peeks n pokes.
ERROR 145 is "cursor out of range", so yes GRAPHICS 28 is only
available on XL/XE machines. The older machines are missing graphics
9-12, (I think- I know there are four graphics modes unavailable
around that number). Hope this has been a little helpful.

I have just added 52 new game screen shots for the SNES, Game Boy, Atari Jaguar, and Philips CD-i to my WWW site. This brings the total number of ORIGINAL screen shots on-line to 1195, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore Vic-20 computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES, SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis, Nintendo 64, Atari Jaguar, Philips CD-i, and Game Boy.

More will be added as I have time. Eventually, I will have my entire collection on-line (hopefully before the turn of the century :)

The Sega CD / Sega 32X are probably next in line.

If this is of interest to you, the URL is listed in my sig.

Michael

P.S. And before anyone else asks; if the game isn't on one of my FS/T lists, it isn't FS/T :)

They ar part of the Atari Hardware Manuals. The 130XE issue is
about 20-30 pages long and has a description of the machine, additional
info concerning changes over the 400/800 and XL series and a couple of
schematics. It isn't great. I forget what is in the 800XL one, but I'm
sure it is similar. The original 400/800 hardware/software reference
manuals were rather thick and provided loads of info. All of these are
available from B&C ComputerVisions.

4022. Interfacing 800XL to ST, revisited

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-22 00:00:00 UTC
From: lvt-cfc@cyber1.servtech.com
Message-ID: <5748ir$9m0@cyber1.servtech.com>
Source record: 78535
Body handling: HTML body converted to readable text

Hello, All.

Sometime last week, we were discussing schemes for interfacing the Atari 8-bit to the ST or to other computers, through the cartridge port. I posted to say that I remembered talking with a fellow, here on this newgroup and then in e-mail, "a few years back," who was building some sort of interface between the Xl cartridge port and the ST. He had even sent me a PostScript copy of his then-current circuit-diagram. Unfortunately, at the time I posted, I hadn't seen printouts of our conversation OR the circuit in years, and didn't even remember precisely WHEN it all took place.

Well, wonder of wonders and much to my surprise, while cleaning my computer room a few days later/ago, I found a several-page printout of that very conversation! It turns out that the conversation took place in September-through-November, 1990, between me and David Clear. The gadget he was building MAY have connected to either the XL's cartridge port OR its expansion (parallel?) port, I'm not sure. I still haven't found any remains of the PostScript file or any form of printout of that circuit diagram...

At the time of our conversation, David Clear's Internet address was dac@ukc.ac.uk. That host still exists, but I can find no David Clear there. Likewise I see no mention of him anywhere on Usenet or the Web (according to the AltaVista search-engine). So I'm unable to get "official" permission to reproduce our conversation, but I'm reasonably sure David wouldn't mind my retyping some of the relevant portions and sharing them with you.

Judging from what I see here, David must have posted to comp.sys.atari.8bit looking for technical information about the Atari 850 interface module, while first contemplating HOW to interface the XL and the ST, in September 1990. I wrote him -- probably to say that "I have the Atari 850 Interface Module Technical Manual; what do you need?" -- and seem to have received my first e-mail directly from David on 5 Sep 90:

> But I decided I didn't want the memory used up - and anyway,
<>> when the XL does a bad crash the memory gets shot which would mean a
<>> reload. I'd rather do it all remotely (which would mean I wouldn't have to
<>> save my source code every time I wanted to test my program).
<>
<> I'm not sure I understand what you just said here... you didn't want to
<> put the ASSEMBLER ITSELF on the XL, because then you'd be unable to use the
<> memory occupied by the assembler, for your own programs, hence your
<> decision to cross-assemble on the ST. Is that what you said? :-)

I'd be interested in 800XL, 1200XL, 130XE and XEGS schematics/docs.

Any suggestions as to WHERE to obtain these materials? I assume it is
impossible to obtain anything from Atari itself at this late date, and
I have NO IDEA whether Sams still sells THEIR Atari-8-bit stuff. Any-
body here willing to sell these items USED?

As a last-ditch measure, anybody willing to photocopy-and-mail? I'd pay
photocopying costs and postage...

Chris

4024. WTT: Atari 2600 & carts for Atari 8 bit computer

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-22 00:00:00 UTC
From: dras@rasmussen.telco.stratus.com
Message-ID: <jlod8x6mb1d.fsf@rasmussen.telco.stratus.com>
Source record: 78537
Cross-posted to: alt.atari.2600,alt.games.video.classic,comp.sys.atari.8bit,rec.games.video.atari

Hi,

I posted this message a few weeks ago and had at least a
couple of people that seemed interested but nothing panned
out. So here I am trying again. I'll also consider cash
offers though I'm not sure what its worth. It seems like
it should be worth at least $20 but I may be way off base.
I really prefer a deal for Atari hardware as outlined
below.

I have the following that I would like to trade:
(warning: use fixed width fonts)

1 Working Atarit 2600 w/2 joysticks and these carts...

Mattel: Atari:
Super Challenget Footbal, Pole Position (2)
Kool-Aid man Yars Revenge
ET (2)
Parker Bros: Vidoe Olympics
Qbert Casino
Frogger Pac Man
Sky Skipper Jungle Hunt
Video Pinball
Sears: Star Raiders
Arcade Pinball Ms Pacman
Night Driver Kangaroo
Space Invaders Galaxian
Maze Craze
Imagic: Dodge em
Fathom Combat (2)
Riddle of the Sphinx Asteroids
Dragonfire

20th Century Fox: Activision:
Worm War I Freeway
Keystone Kapers
Coleco: Decathalon
Donkey Kong Mage Mania
Kaboom
Sega: Pitfall (2)
Congo Bongo

All the carts are used and untested (I did try a couple of them
and they worked fine). Most show what looks to me like typical

ware. The Activision carts look pretty beat. The 2600 seems to work fine. It a bit dusty but otherwise OK.

What I want: One of these Atari machines in good working order: 400, 800, 800XL, 600XL, 1200XL, 65XE, 130XE, or the XEGS (XE game system).

Also, I would take almost any classic arcade game PCB's (or other associated HW) in any condition but thats probably not likely to turn up in these news groups.

Plese send offers to dras@sw.stratus.com

Thanks very much.

Dan R.

>Thanks,
>Richard

Yeah, 28 is 12+16, and the 400/800 OS won't go beyond 11. You'll have to go
into graphics 0 and then adjust the display list.

There are no 1.4 and 1.6 versions. You can get the last version
from http://www.people.memphis.edu/~uglmiller/home.htm, in the
downloads area. The author has dropped support for it.

4030. Re: Screen Noise on 800

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-22 00:00:00 UTC
From: Deana Barrett <pwein@umich.edu>
Message-ID: <3296529D.48A@umich.edu>
Source record: 78543

I had that screen noise on my first Atari 800 when it was new (1980). I used to give it some gentle thumps. I used to pull out the ROM cart and put back in the rom cart. I wiggled the RF TV cable. I was very frustrated with it. When the 800XL came out I bought that and traded my 800 to an Atari repair shop for more XL memory. Eventually I bought one more XL and a 130XE. They all get wavy lines with many different TV's. I hope someone out there can give a good suggestion to solve this problem? (Besides buying a monitor.)

Thanks,

After you ;-)))))!!!

One thing I'd like to critisize is that most coders only write demos (hello to all those programmers in Poland BTW :)))) but no games. Personally, I stopped downloading and watching demos A LONG TIME AGO 'coz they're simply too boring! A nice little game instead is much more interesting. Thing about that before you want to write another "GLORIOUS" MEGA-DEMO or whatever!

Ulf

PS: Some guy in Germany wanted to write AR: THE PALACE for the ATARI 8-bit. Does anybody know anything about that?

I have started to accumulate a bunch of Atari 8-bit software for a
CD-ROM. But have seen several already in the process of being completed
or have already been completed.

Now to the Survey.??

If you were to get a CD-ROM for you IBM, What would you prefer?

1. Files strictly for the Atari 8-Bit
2. Files compatable with both?
3. Doc file which forman?
4. Price range?

I have seen CD-ROM for the Atari 8-Bit up to $60.00..??

I can produce them for much less as I have A Rom burner..

I have collected files for months..but without input as to what the user
would like and would purchase have held off in proudcing a pruduct.

4037. [CART] Computer War <-- What is it?

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-23 00:00:00 UTC
From: Scott <sboss@kennesaw.edu>
Message-ID: <3297D548.1586@kennesaw.edu>
Source record: 78424

Good to be Back,

My Atari has been in the closet for a while, and when I was at the flea market earlier I found an old 800xl for sale with a drive & a few cartridges. One of which being a "Computer War" cartridge for the 400/800/1200 computers. The only name I can see on it is "Thorn EMI Video".

What is this cartridge?

Thanks & Good to be back!
Scott Boss

>Steve

The older 800's had the CTIA chip rather than the GTIA chips. The GTIA modes are 80x192 in resolution. Mode 9 is a one hue 16 intensity scale mode, mode 10 (I think) has 10 color registers that can be set to any hue or intensity. Mode 11 has 16 hues at one intensity. Newer 800's have the GTIA chip and the CTIA in older 800's can be replaced. Many of the cooler games such as Koronis Rift used the GTIA modes so it would be a worthwhile upgrade.

I'm looking for a complete Diamond GOS 3.x package, including the box.

I'd also like to find 2-3 Atari 800 32K RAM boards (e.g. Mosaic) with any docs/software.

Thanks, Richard

I've got a TTF editor but TTF is not the real way to go to create a BITMAP
font which would be needed to render TRUE atari 8bit characters. I know as
i've already created a TTF font (partial) and it looks AWFUL!

I need a Windows BITMAP font and/or editor!

I talked with Darek Mihocka at the ToadFest about a month ago. He was
hoping to get it out the door around the beginning of December. He had
over a hundred upgrade requests at that point. The upgrade was taking
more time than anticipated and his time was very limited and spread
accross several projects.

Source record: 78559

If any of you collectors are looking for the original boxes for
commercial Atari software - maybe you want them to keep the software
in or to spruce up a display - I have the boxes, and I have the
cardboard sleeve style packages (for the Electronic Arts games and
the Antic APX software), that I would like to move out of the house.
Send me a want list and we'll discuss a price based on the quantity
you want. (I'm still keeping my XE and 800 so the games and application
software is not for sale - just the boxes.)

The latest version is 0.16, and support IS temporarily (i hope) dropped.
As I still need to get sound working on my machine (which runs everything
else perfectly!) Help!

Keatah

Yes, plus it suppose to allow easy access to Happy 1050 slow and fast speeds, and writing to disk back side. It has two toggle switches and write protect LED. There are two sets of (jumper wires) from the board. I think these go some where onto the main 1050 board where the Drive Mech. plugs in. But I'm not sure where to plug them in at. Also there is a 4 pin connection on the Controller itself. Anybody in 8-bit land know how to hook this thing up?

Send E-Mail to phantomm@harold.eastky.com

In article <571181$m5i@nnrp1.news.primenet.com>,
Robert Worne <rworne@primenet.com> wrote:

>That bites, so when do we see someone who "just came across" a large
>quantity of Jag controllers sell them on the net for $10-15 apiece?

That is what I think. Some tool just bought them all up hoping to double
his money over the next 6-12 months. It's great to think that 4Play or
someone did this as part of a greand scheme that would have meaning...
But if that was the case I think it would have been done earlier. So I
suggest that if there comes a time were a person selling pads is a likely
suspect--boycott them. Even if it means having to pay more for your own
pad (unlikely really). If they had been ProControllers I would have had
my order in when I first saw the post...

michael,

i'm replying to the question regaurding popularity of atari in europe.

i'm sure there are users still out there that might add some more
details, but way back in '81 i was an army dependant in
germany-heidelburg. in the dod high school i went to we used a entire
lab of atari 800's. the german schools in the area also had them.
also the post exchange sold them in their electronics
departments/catalogs. i recall seeing them available in the german
retail stores as well. even bought some software which i had a hard
time using, the instructions were in deutsch.

...ahh for the good old days.

any other army brat atari users??

-cheers

Send a copy of this with order..!

I have some Atari 1050 Disk drives, cases not most attractive!..Semi Clean but have a school name engraved in the plastic case or on the metal band across the front..

This does not affect the operation of the mechs inside..will gurantee them for at least 30days..probably longer..?

Price shipped...$15.00..send a copy of this message with order so I know what to send.

Au contrare! (sp?) Many of us in the US still like to see the latest demos coming out of Europe, BUT, the coders simply like to write interrupt routines that make our 50 htz machines go wacky. After downloading several demos and only having one or two work partially, we come to the conclusion that it isn't worth the effort to download them in the first place.

Why do the Polish, German, etc. coders limit themselves to having their demos run only on PAL machines? If they want worldwide recognition, they need to write worldwide demos.

Hallo !

Here are some projects I think useful to do:

All for SPARTA-DOS filesystem:
XCOPY - a copy program for complete directories (with subdirectories)
DEFRAG - a defragmentation progam - never seen something like that
NC - a Norten-Commander like disk utility for copying etc, that
works not only with D:-handler but with other handlers - too
XEP80 - a good and fast handler for XEP80 (screen handling only), cause
the Atari-one seems to have a lot of bugs
PLAY - a commandline-based MOD-Player (with no DEMO in it ...)
QUICKV - a commandline-based picture-viewer
to be continued
...

Thanx, Matt

4065. how to format a IOMEGA ZIP on a XL/XE ?

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-24 00:00:00 UTC
From: beco@worldaccess.nl
Message-ID: <2092.6902T1027T2900@worldaccess.nl>
Source record: 78428

Here is a Message of a friend of my : Mathy Van Nisselroy,

Howdy folks

I recently bought an IOMEGA ZIP drive which I want to use with my 8 bit ATARI. Problem is, I can not seem to get it configured just the way it should be configured (a textfile I found on the IOMEGA BBS says: 64 Heads, 96 cilinders, 32 sectors, 196608 total blocks.)

I'm using a BlackBox plus FloppyBoard with the required parity pal on my 130XE (plus US+ OS and GUMBY STEREO).

After I configured the ZIP drive, HDFMT tells me:

mode sense failed
70,24 is error code
05 is key

Does anybody know what this means?

I know somebody in the 8 bit ATARI world is using a setup like this (but with SPARTA DOS, and I want to use in mainly with MyDOS.). But I don't know who. Could this person please share some of his (or her) knowledge with me?

Does anybody know how (read: what code do we need) to controle the special features of the ZIP drive, like protection, ejecting the disk via software, setting it to "non-removable mode", etc.?

Now for something totally different:

I just heard on television that some top modem company (the weenies didn't name the company) has just developed a modem that would be so fast (I believe they mentioed 512kBaud) that you wouldn't really need ISDN. They say so, not me!!! I know that the classic ATARI isn't anywhere near fast enough to use those speeds, but I guess I'm not the only one interested in these things.

CU Mathy Van Nisselroy

PS Bernard Kok was so kind to let me send and receive messages. So please don't fill up his mailbox with useless discussions. As long as I don't have my own address, I'm not gonna go into discussions.

4068. Atari BBS List: 96-11-22 Update

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-24 00:00:00 UTC
From: oscar@justified.com
Message-ID: <MPG.d022403d5b43de298976b@client1.news.psi.net>
Source record: 78431

Nothing particularly exciting this time - just
removed the phone numbers of BBS's that have gone down.
I'll remove these boards from the list altogether eventually.

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was
checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

An asterisk (*) next to the board's phone number indicates that entry has
been updated since the last version of this list.

While cleaning up to move, I've noticed that I still have a few
of my Atari XL titles around. My XL has been dead for a few years now,
and I'm not getting use outta this stuff anymore, so I'd be glad to give
these out to a good home. ;) These are all originals... ;)

Fight Night
Hard Ball
Conan
World Karate Championship
Music Construction Set

I would ask that whoever is interested please pay the shipping ;)

Tim

Sometime ago I heard that there was a fix for the PAL incompatibility.
It involved Piggybacking a Antic chip, but I don't have any other details
on doing it. Also there was talk of a software fix like the translator
disk. But I don't know if it was ever done.

In answer to your question, as with US Programers it is a matter of Economics. They program for what they have available to them. Most of the European programers are no different than the US Programers. If it generates revenue for them then they do it, if not?

I am sure if the Atari Comunity would send these programers a donation of any sort you would see a dramatic change in their programing efforts.

4072. Re: Coders

I am not sure if you are totaly aware of what you ask in your posting.
Just how do you intend to compensate these programers for their efforts?

I know of several projects that would be benificial to all of the Atari
8-Bit comunity but personaly I don't have the Balls to ask for any as I
know what time is entailed in developing the software..

Bob

>The latest version is 0.16, and support IS temporarily (i hope) dropped.
>As I still need to get sound working on my machine (which runs everything
>else perfectly!) Help!

>Keatah

Well first a note on XL-IT 0.16. It seems to work pretty good on my machine (pentium 100) but it doesn't run everything, even when I mess around with some of the command line options. One thing that I can't seem to run is the entire Spy vs Spy series. I got PC Xformer 2.5 to run the original, but it was buggy and basically unplayable. <sigh> Also I'm still messing around with the joystick. The program detects it, but the stick seems unresponsive or even confused when I go to use it.

Anyway, regarding sound: have you read the documentation carefully? Sorry, not trying to imply that you're an idiot or anything, but I myself didn't bother to read it carefully and I was without sound for about a week. My problem was that the zip file didn't unarchive itself correctly; it failed to make a directory called Samples to put the .wav files into. As a result of this, sound failed. As soon as I created the directory and moved the .wav files into it, all was well.

-P

I am looking for any Atari 8 bit computers preferably in working condition and Atari hardware... and software... books. Anything to get me started. I want to start programming and experimenting on the hardware. Now heres the catch.. I have little money (Don't we all!)... So I am hoping there are some kind people out there who would donate something to me. I can pay shipping. If anyone has an old atari 8 bit laying around gathering dust, I will provide it with a good home. I will not be reselling the equipment. Thank you all.

Message-ID: <3298A112.A52@tcd.net>
Source record: 78439

I bought the rights to the 130XE interface card from Supra Corp several
years ago and maybe perhaps it is the only PBI card avaialble today?

If you wish to do a 1200XL Wooley upgrade then you could use this
card..if you want to do a MIO to 130XE then you need this card..These
are
new..and will sell them with or without the cart port installed.

Cards are $19.00 with cart port adaptor installed plus $4.00 s/h.

If you want to get your own Cart Port connector and want a bare card
will sell them for $12.00 plus $4.00 s/h..

Attach copy of this message with order..

Bob

Itï¿½s just o.k. - I ï¿½m writing software for the Atari by myself and just know, how much work it is.
I just want to give some ideaï¿½s for those, they want to have. Itï¿½s nice to have a new demo, too, but there arenï¿½t enough coding tools or something like that.
To the question of reward - first some code as a pure hobby, they are glad if their progs will be used.
And then there is the possibility to give your work as shareware.
But IMHO there are some problems with shareware: first: Iï¿½ve no idea how to give some five or ten dollars from Europe to America (without giving a lot of money for transfer.)
Second: the authors should reduce their prices. If they want to have $20 or even more (what is an reasonable price) its too much for such an old machine as the atari and noone will pay. But $10 or $5 will pay a lot of people I think.

Thanx, Matt

Bob,

I think Matt's posting was more of an effort to possibly give
focus to the energy thats already out there in hobbyist coders. I seriously
doubt anyone expects someone to write new software for the 8-bit
with the expectation of turning a profit.

For most of us who still support the platform, its out of
personal desire, or desire to help others enjoy the Atari more. Even
with program like APE, I would have to sell thousands upon thousands
of copies to turn a profit based on the time I put into it.

While I personally am not going to start coding XCOPY for
Spartados tomnorrow, mabey if more people like Matt come forward
to at least let coders know thier work will at least be APPRICIATED, they
will be more motiviated to start working on it.

Steve

Obviously I was unclear on what I intended to say on the first question
of the last servey.

If and when a Cd-Rom were produced for the Atari 8-bit.

1..Would you as a user prefer it to have only Atari 8-Bit files in
anyone of the following:

a. Atari Bootable disks once diskcomed out to the Atari drive.

b. Atari Bootable files period.

c. Include all PC emulated files on the disk..?

Or in other words a CD-ROM for the ATARI 8-BIT ONLY OR INCLUDE PC
EMULATED FILES?

4081. CD-ROM for Atari 8-BIT??

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-24 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <32989C18.758A@tcd.net>
Source record: 78444

From the survey I previously posted had a suggestion that this be a combined effort from all the Atari 8-bit users with input, files ect.

Instead of one person saying what goes on the CD, users send files, be it text (ascii, atascii) if available reguarding upgrades, trouble shooting ect..

I personaly within the past 10 years have notes on problems that I have come across on repairing different componets, computers, drives, MIO's ect..these could be put into a text section along with those of otheres who encountered different problems..? Accepatable Idea? yes no maybe so?

Anyone who I have not previously contacted wish to help/partisipate? Attach your efforts to the reply with a read.me file with giving you credit for your efforts..will definately include any and all not duplicated efforts..

This version has a point and click file interface for Win95. This version has great sound support. This version is the premier atari 8bit emulator, even though the other costs $40.00 or whatever.

This version runs Alternate Reality.

Xl-it 1.6 thrashes the competition.

Source record: 78451

hi!!!

thanx jaskier for your question... if i write demos i test
them on my machines and i havent got a ntsc-machine... so what
can i do to test them???

has anybody any "guideline" to make it possible to test a program/demo
that it is working on both machines (pal/ntsc)?

i think it is not my fault if it doesnt work on non-pals because
i dont know that! my first attempt was to put my demos on the web
so everybody can download them... but i didnt recieved any emails
that they doesnt work on ntsc-machines... some mexican/american
guys or girls send me email that they work perfectly on ntsc-machines...

so here are they:

carpe.com
4ktro.com
8ktro.com
16khiptro.com

avaible on internet

http://www.uni-karlsruhe.de/~Marek.Tomczyk/

and on other pages as well...

bye HeAvEn/Member of Taquart (from germany of course...)

ps. and if some demos doesnt work on emulators... not my problem...
i will not fix any of my demos to run on any emulator...
the one and only machines are "real" ones... not emulated... we
are not in "ms-dos"-land...

there is one thing i want to write... (for today... ;-))

ref. writing programs for the xl...

it takes a lot of time spending for writing a game or a applikation...
or even demos (which i prefer...)

but who REALLY cares of using esp. applikations on xl???
why the hell should we code a "word 7.0" for xl?????
maybe i will spend month in coding a applikation like "word 7.0" or "excel 5.0" (not really...) but who really
cares???? all of you are crying for programs... but when someone will write such a thing then anybody
will look at them and say "oh nice, look it is like word on my pentium..." and then turning back to the real
one...

so tell me... what should users write for the xl???? make a list and
post it here in the newsgroup... let us make a market-research... ;-)

the only thing i write are demos because i like watching "useless" demos (even on my amiga...) and code some
"utilities-for-demo-coding-and-then-
through-it-away-after-using"...

ref. games... it would be easier to code games when there are some guys out there who help in such projects...
but dont cry for wing commander
or tekken... ;-)

bye HeAvEn/Taquart

here is a excerpt of my webpage

"First I want to thank YOU for hitting this page or downloading my XL-Demos ,dentros or whatever you want to
call them...

Why coding on 8-Bit Atari Computers in the era of microsoft, pentium, Win95, ... ????
The answer is very simple... coz. the XL/XE Computers are the best 8-Bit Computers with most flexible
grafic-chips in the
history of 6502,Z80,6510,...

advantages of ANTIC, GTIA (Custom video-chips):

build in 15 text/grafic-modes
this modes are full mixible

full usage of PAL/NTSC- screen (OVERSCAN! without tricks ;-))
own "display-list"-language (see "copper-list" on amiga...)
256 colors (max. 16 on screen without tricks like DLIs)
Display-List-Interrupt
flexible line-width of every scanline possible !
powerfull softscroll-registers build in...
you can create selfmade grafic-modes like CIP, HIP, APAC-Mode
many other which you discover while coding... :)))

Disadvantages of the XL videosystem

4 (5) Player/Missles with max 8x255 (Sprites) resolution
no color-ram (max. 4 colors in 160x200 without "tricks")
too small character-set (128 chars only...)
hmmm... not many... eh?

You will discover the powerfull possibilities of this machine if you start coding demos...

What is "CIP"-Mode?

"CIP" stands for "Color Interlacing Picture" and uses the interlace-technique to display 7 colors instead of 4 in gr.15 (160 x 200). Do you need a Paint-program or picture-disk with examples???

Try ftp-server of the group TIGHT.

What is "HIP"-Mode?

"HIP" was found in June, July 1996 by members of HARD Software, the coders of brilliant demos like "Veronica", "Cool Emotion" and "Joyride". "HIP" stands for "Hard Interlacing Picture" and enables to display 30 (!) shades in a resolution of max. 160 x 240.
further information conc. HIP please read the HIP-Faq.

What is "APAC-Mode"?

The shortage APAC-Mode is taken from the gif-viewer with the called "Apacview". This viewer enables to show iff- or gif-images on small atari with 256 colors. the program itself
uses the interlace technique to display the picture...

1. frame the 16-greyscales of the picture and 2. frame the 16-colors of the image...

Our eyes are "mixing" this two values to a "apac-color", so 16 colors with 16 shades means 256 different colors...

...

hallo herr petersen...

its my personal opinion... not from all of the xl-users around the
globus...

i have written some little games in the past (around 1990) for the xl...
but everyone should do the thing with the xl what ever he wants...

but why not "mobilizing" some guys to code/write some OWN stuff and
not just consuming.... think about it when you play a old game for
some seconds and then turning back to your playstation or to your
new pentium-game... ;-)

its easier to write a megademo than a game ;-)...believe me (or not)...
i have spent some thoughts in coding a "bomberman"-clone on the xl and
for 4 players simultan...but

1. who would play such a game???
2. i will finish my new "shit" mega-demo "hyperion"
3. i have no creativity for such a game...

so:

Please send me your suggestions for such a multiplayer-game!!!!

bye HeAvEn/Member of Taquart

ps. there are demo-coders who made it possible to play modfiles on xl
or the new HIP-Grafic-mode!!!

Personally, I don't see what's wrong with writing applications, although if I had to write one I'd have to give up all other live activities (GRIN!) There is something just as exciting to some of us at seeing a new application as seeing a new demo, especially if it makes life easier on the ol' 8-bits. I've long ago stopped writing on my 8-bit for anything but the club's newsletter because the apps I use on my clone are just more convenient.

Seems to me that with the MAX line of chips we should be headed toward faster communications and I know that some people are working on that right now. I wish them the best, and hope that they can come through with something remarkable. ZModem recieve is already a reality, and I know that ZModem send is on its way. Combine the two and we'll really get 8-bitters on the Intrernet.

But, don't stop those demos! They are wonderful pieces of entertainment and wonderment, and great practice for the coders who write them.

Games? Well, I was never a gamer, but who knows ...

This is the XEGS, and no, it's not rare. In fact, they were moving out of the stores pretty well when first introduced. It's a 64K machine, not too much unlike the 65XE. It was marketed as a game system, and, indeed, came with game carts.

A guy I met was so incensed by Atari's marketing strategy for this machine (they didn't even call it a computer on the box) that he stood outside a big toy retailer and handed flyers to people leaving the store with the system. The flyers stated that by adding a disk drive, the people would have a full-fledged computer.

The flyers left his hand, were read briefly, and most of them wound up in the nearest litter basket.

Now, that would be an interesting and worthwhile contribution!

All the stuff about bootable disks and/or disk images is kind of moot,
because the Schreurs brothers and others have already done a lot of that.
But service hints? That will be most valuable in years to come.

I realize that you probably can't fill up 650 Mbytes of CD-ROM with your
service experience, but any sizeable section devoted to that will make
your CD-ROM unique.

Okay. I have questions:

1. I have an Atari 800XL, where can I get an assembler for it
2. Where can I get graphics / sound books in Assembler for it
2A. And will these books show how to access the joystick through
assembler?
3. If the assembler comes on disk where the hell do I get a
disk drive.
4. If I write something really cool is there a way to transfer that to
the PC so it can be sent over the internet?
5. How do I make the software compatible with PAL machines?

I do have some interesting ideas for some games(no demos.) but I
have no idea how long it will take me to learn the architecture.

I've already done 80X86 Assembler, C, C++ programming and in the
process of learning Visual Basic and Visual C++.

current ideas:

Anime influenced Tetris styled game (Ala Puyo Puyo)
A Zelda styled Roleplaying Game
A port of my all time favorite: Solmons Key

16 colors doesnt sound like alot for this beastie but I bet if your
a great artist thats all the colors you would need.

Thanks for listening

Stephen

Probably the new 56K baud modems (56K provider to you, 33.3K the other way)
which have recently been introduced .. require a provider with a digital
hookup to the telephone connection.

ISDN (each channel) is 64K baud .. though many times you can use both
channels (at twice the per minute fees) to double the rate.

Also, cable modems (hook up to your cable tv company) start at about 512K
and get faster.

This guy has a NetCom account ($19.95/month) and a PC sophisticated enough
to access the internet ... and then he has to BEG for an 8 bit Atari?????
What's wrong with this picture???

That is the Atari XE Game System. They are more plentiful than, say, a 1200XL, but not as plentiful as a 2600. Without the keyboard, it is just a game system, compatible with all the 8-bit cartridges, plus some that were made for it. When you plug in the keyboard, it becomes an 8-bit compatible computer. It has BASIC built in, plus you can hook up all the standard peripherals via the SIO port.

The XEGS also has Missile Command built in. You run it by either (a)
turning the machine on with the keyboard unplugged and no cartridge, or
(b) holding down the Select button when you turn it on.

Yep, the program is loading the wave files from the samples directory. I removed the samples directory for a test, and sure enough, I got the appropriate error. So I put it back :-)

I've never messed around with the joystick too much.. I'll check out spy vs spy and see what I can figure out.. :-)

I have some old 8-bit equipment, software and books, etc., that I would like pass on to someone who could get some good out of it.

Equipment:

Two model 800XLs
One model 800 (I'm not sure this still works)
An RGB color monitor
One 810 floppy drive (with "Happy Enhancer" installed) (This might not work, either)
One 1050 floppy drive
One 850 serial port box
One 1030 modem
One CX-77 Touch Tablet
One 410 Cassette player/recorder
All of the above have cables, power supplies, manuals, etc. Most have original boxes.

Software:

Pac-Man (Cartridge)
Atatriwriter (Cartridge)
Atari BASIC (Cartridge)
Monkey Wrench II (Cartridge)
Donkey Kong (Cartridge)
Centipede (Cartridge)
Picnic Paranoia (Cartridge)
Computer Chess (Cartridge)
Atari Artist (Cartridge)
SynCalc
SynFile+
Snooper Troops
The Goonies
Zaxxon
Canyon Climber
Buried Bucks
Etc., etc., etc.

Books:

Hackerbook for Your Atari Computer (by H. C. Wagner)
The Atari Assembler (by Don Inman and Kurt Inman)
Your Atari Computer (by Ian Poole)
The Master Memory Map (by Craig Patchett and Robin Sherer)
Understanding Atari Graphics (by Michael Boom)
About a dozen or so "Antic" and "Analog" Magazines

I'm not looking to get rich off of this. I'd like$50 for the lot, and for that I'll deliver it to anywhere within a 150 mile radius of Fort Wayne, Indiana. If I have to ship it, then I'd need to add the cost of shipping.

If you're interested, please e-mail to 70717.3041@compuserve.com.

I have the following items for sale:

Apple II+ computer, 64K RAM, works but needs new keyboard. make offer

2 Apple Disk II drives, $10 each

Apple green monochrome composite monitor w/ stand $20

Commodore 1531 cassette drive, for Commodore +4 or 16 $5.00

Star Gemini 10 printer, works but cover is cracked. $15

Okidata Microline 182 printer. Works Good. $25

Coleco ADAM computer system, includes printer, keyboard, 1 joystick,
built-in word processor. $30

Audiotronics 12" amber mono comoposite monitor

Atari 7800 game system in original box, with PS, 1 joystick, RF switch,
and Centipede cartridge. $20

All prices are in US dollars. Prices do not include shipping. You pay
shipping or pick up in Dayton, Ohio area. I will consider trades for Atari
XL software. Email bx557@freenet.toronto.on.ca and/or an422@dayton.wright.edu.

(Talk of ntsc and pal and pal demos/games not working on ntsc
A8s.)
Isn't there a Nir Dary mod in the FAQ? It is a mod for the OS
and uses a PAL Antic chip. Bill Kendrick said he just put
in the PAL antic chip and most, if not all, European PAL
games and demos work fine, even without the OS mod.
Finally, Tom Hunt has offered to 'hack' PAL games to make
them work on ntsc machines. He probably reads this group,
so I definitely don't speak for Tom, but I bet if there's
a really good PAL game or demo, Tom would modify it for
NTSC.

THIS IS THE FAIREST MOST HONEST WAY I KNOW TO SHARE THE WEALTH!

Hello!!

Would you like to make thousands of dollars, quickly, legally, with NO CATCH? Then keep reading.....please take five minutes to read this article- it will change your life, just like it did mine. It's true! you can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested, keep reading; if you're not, I apologize for wasting your time.

Here we go, A little while back, I was browsing through these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars in weeks, with only an initial investment of $5! So, I thought, "Yeah, right, must be a scam".

but I was curious, like most of us, so I kept reading. Anyway, it said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it!

So after thinking it over, talking to a few people first, I tried it. I figured what have I got to lose except for 5 stamps and $5, right? Well, guess what....within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But then money kept coming IN, tripling in size and

multiplying by 10-20 times the amount that I got the first week! In my first week I made about 2- to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!!!!! In the third week, I had over $10,000 dollars, and it's still growing! This is my fourth week (Nov 13) and I've made about $42,000 TOTAL, and believe it or not the money is still coming in.....

Let me tell you how this works and most importantly, WHY it works...also, make sure you print a copy of this article NOW so you get the information from it, and begin making money.

The Process is very simple, and it consists of 3 EASY steps:

STEP 1: Get 5 seperate pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST". YOU ARE NUMBER 4. get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH having a piece of paper and the $1 bill inside.

NOTE: make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this.

This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses.

1. Bruce, P.I. Box 63 4700 Keele St., North York, Ontario M3J 1P3
2. Lars Westin Bjï¿½rkvï¿½gen 3 740 12 Knutby SWEDEN
3. D. Hill, 4280 150 6 Ave. S.W., Calgery, AB, Canada T2P 3Y7
4. Mattias W sernanders vï¿½g 1 rum 535 752 61 Uppsala Sweden
5. Jeff Boldrick, RR#2 Tweed, Ontario K0K3J0

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becoming 3, etc.) editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least

200 news groups (there are around 10,000 of them!!). All you need is say, at least 200. HOW TO DO THIS: If you have netscape 3.0 do EXACTLY the following:

1) click on any news group like normal, THEN click on 'TO NEWS', which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2) Leave the newsgroup box as it is, but CHANGE the subject box to somehting eye-catching, like, "NEED CASH $$$ READ HERE" $$$ or "FAST CASH" !!!

3) Tab once and you should be ready to type. Now, Copy and paste or retype (only once)

THIS WHOLE ARTICLE, word for word, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the same.

4) When you're done typing(Copy/Paste) the whole article, click on FILE in THIS BOX,

right above send, NOT where it says netscape news on the first box. Click on SAVE AS when you're under FILE. Save your article as a Text file to our c: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTILL YOU HAVE SAVED IT. Once saved, move on to number 5 below.

5) If you still have all of our text. send or post to this newsgroup now by simply clicking send, which is right below AFILE, and right above the Cc: button.

6) Here's where you're going to post all 200. OK, click on any newsgroups then click on 'TO NEWS', again (in the top left hand corner of your netscape navigator. Leave the newsgroups box alone again, put your eye-catching title in the SUBJECT BOX, hit tab once you're in the body of the message, and then click on ATTACHMENT, which is below the subject box. You will get another box to come up. Click on ATTACH FILE, then find YOUR FILE THAT YOU HAVE SAVED; click once on this file, and then click OPEN. NOw click on OK. If you did this right, you

should see our file name in the attachments box, and it will be shaded green.

IF YOU USE I.E EXPLORER, IT'S JUST AS EASY: Holding down the left mouse button, highlight this article. Then press the "CTRL" key and the "C" key at the same, to copy this article. Then print this article for your records to have the names of those you will be sending $1 bills to.

Next, go to the news groups and press "POST AN ARTICLE". A window will open. Type in your headlines in the subject area and then click in the large windows below. If you want to edit the article, do so and then highlight and copy it again. Now everytime you post the article in a newsgroup all you have to reat is "CTRL" and "V" and press POST.

7) That's it! Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups. You See? Now you just have 100 to go!! (Don't worry, each one takes about 30 seconds, once you get used to it). REMEMBER, 200 IS THE MINIMUM. The more you post, the more money you will make.

You are now in the mail-order business and will start receivng your $1 enveloopes from various people all over the world, within days! HINT: THE MORE NEWSGROUPS YOU POST TOK THE MORE MONEY YOU WILL MAKE.

You may want to rent a PO Box eventualy, because of all the mail. If you wish to stay anonymouse, you can come up with a name, such as "manager" or " investor". Just make sure all the address that you have typed in for the 4 people plus yourself are correct, please.

LET ME TELL YOU WHY THIS SYSTEM WORKS!

Out of every 200 posting, let's say I ONLY receive 5 replies, which is actually VERY LOW. So I made 5 dollars with my name at #5. Now, each person who just sent me $1 makes, say, only 200 posting, now with your name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. So people send you $1 now-that's $50 you have just made! Next, your new 50 agens each post 200 newsgroups with your name at number #3, or 10,000 POSTINGS (50x200 = 10,000). The average return is 500 at $1

each, so $500. They make 200 postings, which is 5,000 returns at $1 each, which is $5,000 dollars! and finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 BEFROE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE ONLY MAKES 200 POSTINGS, AND IF ONLY 5 PEOPLE RESPOND!!!!!!

When your name is no longer on the list, you simply take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 TO THE NAMES ON THE LIST. PUTTING YOUR NAME AT #5 AGAIN. And start posting again. The thing to remember is, THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY- just like you are right now!!!

So can you aford $5 to see if it really works? I think so.....

People have said, "What if the plan is played out and no one sends you the money?"

So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE who are joining the internet and newsgroups every day and are willing to give it a try?

Estimates are at 20,000 to 50,000 new users, every day with THOUSANDS of those actually joining the internet.

Remember, PLAY FAIRLY, AND HONESTLY, and this WILL WORK, I promise you!!!! You just to be honest. Make sure yhou print this article RIGHT NOW.

Also, try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

REMEMBER: HONESTY IS THE BEST POLICY! You don't need to cheat the back idea is to make money!

GOOD LUCK TO ALL PLEASE PLAY FAIRLY, AND YOU WILL REAP THE HUGE REWARDS FROM THIS-TONS OF EXTRA CASH!!!!

One last note: If you try to deceive people by posting the messages with your name on the list and not sending the money to the poeple

already on the list you won't get much.

Someone I talked to knew someone who did that and he only made $150 dollars, and that's after seven or eight weeks! Then he sent the 5 $1 bills, people added his to their list, and in 4-5 weeks he had over $10,000!!!

THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING US ANYTHING BUT OUR TIME, $5 AND FIVE POSTAGE STAMPS!

I would like to add that even though you have the directory, it doesn't
necessarily mean that you'll have sound. I had to actually install all
the SB16 drivers under DOS for sound to work.
Also, don't expect a high quality sound. International Karate doesn't
give any sound at all, except for the opening melody.
I hope the author will continue working on the emulator, so far it runs
quite good.

Hi !
I'm looking for a filecopy program that works perfect with Mydos - that
means it should work:
- with all densities
- with subdirctories
And it should be as easy to use as Norton Comander on PC

If you have such a program please e-mail me !
Thanx, Stephan

I have been running a SyQuest EZ135 removable media on my 8-bit with a Black Box for over a year. The only major problem that I encountered was with low level formating. I landed up doing it on my STe or Falcon and then doing the high level format with the Black Box software. It then works just fine! The SyQuest carts do come preformated but prefer to low level reformat it. If you have access to a PC or ST/Falcon with a SCSI connection, try low level formating it on that machine and then doing the high level on the Atari with the Black Box.

I am not sure about the SCSI I.D. with the ZIP drives. I believe they may be limited and not sure if that will cause a problem for you.

Take care, Jon

That would be USRobotics and their x2 modem technology... it recieves at
54.6kb/s and sends at 28.8/33.6kb/s!
```

4115. Please Help!!!

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-26 00:00:00 UTC
From: Steffin
Message-ID: <329aec37.69848152@news.inet-direct.com>
Source record: 78478

Thanks for taking the time to read this message! This is about a lady that gave all she could to everyone, including me. Her name is Wendy.

When I was young she became my foster mother after my real mother had abandon me. Never having any kids of her own she became a foster parent. That I got to be in her care was probably the best thing that had ever happened to me. She had other foster children and even ended up taking care of many of the neighborhood kids.

Wendy is a lady that just never gave up and always gave more than anyone could imagine. I no longer think of my real mother as mother but rather Wendy as my only true mother. I know that I�m not the only one that thinks that way either. It wasn�t just kids that she helped it included the elderly, the disabled and the just down and out. What it takes to qualify for a saint is something I never found out, but I know it can�t be more than the things I saw this lady do for anybody. Even people that had wronged her could find themselves looking up at her while she helped them when they were down.

I�m 26 now and many of the things I�m telling you I never really realized until now. Since I was a kid she has helped me with everything from recovering from my mistakes to just being there to say "You can do it... It'll be okay." I've never been able to make a good attempt at trying to repay her for all she's done for me and I'm not alone. Many people just have taken for granted the things she's done for them.

I know by now you're asking yourself why I've posted this letter. Well, to be honest and straight with you it's because I would like your help. If there's one thing that I've learned from Wendy it's that, "We are our neighbors keepers." You know the golden rule, "Do onto others as you would have them do onto you." Anyway now Wendy is an older lady that is disabled and can't do as much as she used to. With the disability sometimes expenses can be too much. I now live in Arkansas and can't be of much help. With no real family I'd like to do something to try to repay all she done for me and many others.

That's were you come in. See if you can think back to someone that helped you no matter how big or small. Maybe it's someone you can't even remember or have lost touch with. For that moment picture Wendy and say, "I'd like to repay that kindness." I wish you would sit down and write a small note saying "Thanks for being the generous person that you have been!" If you could include something to help out. Maybe it's a five dollar bill, a book of stamps, even a dollar. Oh and would you also tell her the Steffin

sends his love. Her birthday is next month on the 27th and I�m hoping
I can make this own a very memorable one.

Thanks for reading and if you choose to help God pless you.
Her address is

Wendy Mcghee

Yeh. I'd love to have one too. Trouble is, there doesn't seem to be
anyone who knows how to do it that has the time to do it. Programming
of this type takes a considerable amount of time to accomplish, and
no-one really wants to spend time programming the OLD :(ATARI. Which
is a real shame. I sure wish that ATARI had spent more time keeping
their 8-BIT section alive, maybe today it would still be in the race.
(HEY, it IS the BEST Computer of it's KIND, isn't IT)
Sorry I couldn't help you with this, but I just had to reply :)

....all previous stuff deleted...

There are game coders still around for the 8 bit. I personally know of one who is quite productive - a member of SCAT (Suburban Chicago Atarians - an Atari only club that still holds monthly meetings for the membership (3rd Tuesday of the month at College of DuPage). (Shameless plug: If in the greater Chicagoland area and looking for an Atari club, check us out.)

But back to our coder, maybe some of you also know of him, his name is Joe Chiko. He has been in the club at least as long as I have (since '86) and has written many games over the years. He started writing games to challenge his very young children at the time and as they have grown, so has the design of his games. He now writes for his older children and his wife and his fellow club members and himself. Joe has really learned over the years how to coax all kinds of wonderment out of the Atari and his demos of his games at our club are always well received.

His games are sold on club disks at very nominal prices (around $3-5/disk) but even at that low price there are few if any takers from outside of our club. If interested in his work, contact me and I'll put you in touch with him.

(I guess another shameless plug: Our club also still runs a bbs - Graceland North BBS. The list of club disks from our 8 and 16 bit libraries is available on the BBS among other things. The BBS is at (630) 545-2554. It runs 14.4 V32/v1.2 - is available 24hr/day, 7 days a week.)

Long live our Atari's, even without the mother company. Wayne

I got a copy off of Yogi's. Basically you move back and forth and shoot cruise missiles as viewed from something like a periscope. Didn't knock my socks off.

Anyone remember War Games? First the movie, then the Atari game? One portion was similar to Computer War, but it had others too, air to air, etc. Another you'll want to try is Final Legacy, one of my fav Atari games.

Maury

Demos should not be fixed for emulators. Emulators should be fixed for Demos.
It is the aim of the emulator writer to make the emulator run anything that
an Atari 8-bit can run.

AE.

PS. It is possible on PCs to change the vertical refresh rate. Do any emulators
take this into account and let you change the refresh rate to 50Hz or 60Hz in
order to get perfect timing? It may not be possible to set it to 50Hz on PCs,
but with some graphics cards, 100Hz can be done. What refresh rates do existing
emulators run at? PC X-Former 2.52 runs at 70Hz on my PC.

>
>This is my fourth week (Nov 13) and I've made about $42,000 TOTAL, and
>
>believe it or not the money is still coming in.......

Lets see, $32,000 in $1 bills in one week. That amounts to 32,000 letters. Since the post office does not deliver on Sundays, that means you received an average of 5,333 letters per day. If you sleep for eight hours a day, and spend the rest of it opening 5,333 letters, you would have to open one letter approximately every 11 seconds all day long without rest or food. You won't even have time to pay your bills or do other household chores. You'll also need to rent a truck to drive all that money to the bank and pick up your next load of mail because it will weigh about a ton. That means you'll need to cut into your sleep time and/or open the mail faster.

This is beside the fact that the bank, police, FBI, and the IRS will become very inquisitive over your repeated large cash deposits. Your home will probably be raided once or twice if not outright seized for probable cause of drug trafficing, money laundering/counterfitting, etc. The postmaster general will be after you to explain why you're suddenly getting so much mail. Somebody at the post office will go 'postal' because of the sudden manditory overtime to sort mail. The garbage collectors will fine you for

exceeding your weekly garbage limit, and much of it will remain on your lawn since they can't haul it all away. That means the city will be after you as well because of all the trash in your yard (not to mension that it hasn't been mowed in some time since you've been busy opening 5,333 letter a day). BTW, doesn't your finger get a bit sore and don't the papercuts hurt?

It goes without saying though, if you spam your message to 200 newsgroups, and only 15 people are dumb enough to respond and spam out another 200 messages per person, you will have ran out of news groups to continue the chain in. This is because there are only 3-4,000 newsgroups, not 10,000, and only about half of those see a significant amount of activity. Max profit for you is $15 income - $7 (investment + stamps/envelopes) = $8 net. Wow.

Your story is just a weeeeeee bit far fetched.

4122. Atari Copyrights??

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-26 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <329B8831.339B@tcd.net>
Source record: 78485

There would not just happen to be a list of all the old Software products Atari put out for the 400, 800, 800XL, 1200's and the 130XE's would there?

If so direct me in that direction. If not then how would you like to see some of that old software avaiable again? Now this is only related to what Atari put out..Not the 3rd party programs like Synapse, VisiCorp, or Borderbund, Datamost ect.

Start shooting Software titles my way need to compile a large list. Then at a future date will tell you what is going on as of this date.

Thanks...Bob

4123. Re: Filecopy-prg. for Mydos wanted...

Newsgroup: comp.sys.atari.8bit

In Poland is available the MyDOS 4.5 with different DUP.SYS. This program
looks like Norton Commander and can copy files with all density and
subdirectories.

Message-ID: <329BB785.1A29@cdsnet.net>
Source record: 78487

All Items have been tested and are in good condtion
unless Stated.

Shipping, mostly by US Priority mail, had excellent
results. $3.00 to $8.00 shipping charges.

Payment, Checks take 8 days to clear, Money orders
are shipped same/next day, COD with $5.00 deposit
only.

1 RamRod board for XL/XE computers, with book. $30.00
1 RamBo XL256K with ram and book. $30.00
1 OmniMOnXL With Doc's $30.00

2 256X1 ram chips for 800/XL/XE (new) $ 4.00 for 8
1 800XL motherboards, fully socketed TESTED!! $15.00
1 810 Atari service manual $15.00 OnHold
1 1050 service manual, Atari's $15.00
1 1050 motherboard TESTED!! $20.00
3 PIA's C014795 NEW $ 4.00
2 Pokey's C012294 NEW $ 4.00
1 5200 OS C019156 NEW $ 5.00
1 850 ROM (Very hard to find!) NEW $15.00

4 Atari Joystick centers (white plastic) NEW $ 2.50
5 Atari 2600/A Switchs, NEW $ 1.50
1 XL Keyboards! TESTED!! $15.00
1 1200XL service manual, Atari's $10.00
1 1025 Atari service manual $10.00
1 800 motherboard NEW $10.00

I have more, and will do another later, If you
need a part not listed, I might have it, ask.

I had Bob Klass username on my PC, then my ISP got screwed up and it got disconnected so now I dont have his user name anymore.

Anyway Bob Klass if you can contact me I would be interested in buying a couple floppy drives along with any blank floppies. I am also looking for Assembler cartridge to use to program some games.

Regards

Stephen

4128. how to format a IOMEGA ZIP on a XL/XE ?

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-26 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <329b45ca@pianosa.demon.co.uk>
Source record: 78491

Whilst reading the usual rubbish I find here, Bernard Kok wrote something
interesting to All about how to format a IOMEGA ZIP on a XL/XE ?:

Hello Bernard,

BK> I just heard on television that some top modem company (the weenies
BK> didn't name the company) has just developed a modem that would be so

The company is US Robotics. The new speed is called x2, and USR have submitted
details to the relevant standards boards(s) with the hope that they become
adopted.

4129. 800XL Memory Problem?

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-26 00:00:00 UTC
From: Brad Rogers <brad@pianosa.demon.co.uk>
Message-ID: <329b4257@pianosa.demon.co.uk>
Source record: 78492

Whilst reading the usual rubbish I find here, Ronald J. Hall wrote something
interesting to All about 800XL Memory Problem?:

Hello Ronald,

>> If it is a disk-based game, have you pressed the option key before turning
RJH> So I gather I'm supposed to hold down the <Option> key before I
RJH> turn the computer on? (for disk-based games?) Hmm...I'll give it

I think you're getting confused with holding the START key down, for cassette
boot tapes. Holding the OPTION key down (on XL/E's) disables the inbuilt BASIC
cart, thereby giving a larger area of free RAM.

Would you like the following?

1 48k 800 with power supplie,dust cover
1 600xl no power supply
1 800xl with power supply and video cord
1 with power supplies and SIO's
2 810 Di1200xl with power supply
2 850 Interfaces sk Drives with power supplies and SIO's
1 Percom1200 Baud Modem w/ps,box,SIO,manual
1 MPP 300 Baud Modem (joystick port),ps,Term Cart
1 Universal Data Systems Modem(Baud? Dunno,never tried)
1 Magnavox 80 Monochrome monitor w/cord. Green
4 Joysticks
1 Axlon 12 Disk Drive (SD) with SIO,manual,dust cover.
1 Broken 1050 (It turns on, but won't spin), ps
1 Atari SX212
1 Axlon 8k Memory Module
1 Axlon 32k Memory Module
1 Broken (I think) 1010 Program Recorder
1 Set of remote control joysticks and control box.
1 Radal Vadic 2400 baud modem (works great, it the one I've been using
with my 800xl), power cord.

Carts:

1 Atari Basic
1 Pacman
1 Centipede
1 Defender
1 Star Raiders

Manuals:(all original,no copies)

Atari 400/800 Technical Reference Notes,with complete
os Listing
Atari 400/800 Hardware Manual
850 Interface operators Manual
Atari DOS II Reference Guide
Atari Basic Reference Guide
Atari Microsoft Basic Instruction Manual

4133. FS/T: Atari 8-bit computer items [11/27/96] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-27 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <57gvpd$op2@dfw-ixnews5.ix.netcom.com>
Source record: 78496

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 11/27/96

NOTE: There are currently 1010 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

Christmas season special

From 11/27/96 until 12/21/96, all Computer item orders over $50 will receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST, Apple][, C64/C128/Vic-20, IBM, Tandy and TI. All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer systems. You can find those FS/T lists on my web site.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very

rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 9.50 Delta Drawing (Spinnaker)
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio
Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

> assembler?
> 3. If the assembler comes on disk where the hell do I get a
> disk drive.
> 4. If I write something really cool is there a way to transfer that to
> the PC so it can be sent over the internet?With a SIO2PC-cable you can emulate a Floppy disk as well as you can put
your files to PC. Assmebler you should get from the umich- archive (?),
the other hardware - look at the postings, sometimes people sell their
equipment here. Have a closer look to the 8-bit F.A.Q. frequently posted
here - It will help you a lot.

> 5. How do I make the software compatible with PAL machines?Thats the most interesting piont to discuss, I think. First of all there
is one REGister in the Graphics-Chips where a programm could find out,
if it runs on a PAL or NTSC-machine.
But where the real diffecences are - I donï¿½t know ...

> I do have some interesting ideas for some games(no demos.) but I
> have no idea how long it will take me to learn the architecture.Structure is not very simple, any experiences with AMIGA-machines will
help a lot 8-), but there are only 4 Custom-Chips you have to deal with
8-)

Good luck, Matt

> will look at them and say "oh nice, look it is like word on my pentium..." and then turning back to the real
> one...O.K. - youï¿½re completely right - but application means also such simple tool as an mod-player for XL (f.e. command-line based for Sparta-DOS or compatible, without showing thousends of effects before playing the sound - IMHO such "simple" program doesnï¿½t exist) an picture viewer (with emulating as much colors as you can ...) etc.

But here are some very strong wishes !!!

Please notice, that we arenï¿½t in the early 80ies, that means:
- RESET-Protection is not nessecarary any more
- there exist larger drives than single density
- there exist more DOS than Atari-DOS 2.0

Please code as long and good DEMOS as you like to, but make them run with Sparta-DOS or BW-Dos or Mydos, so that the user can put them on a Harddrive or a 3 1/2 " Floppy or a 16meg SIO2PC image ...
They could contain a lot of files, but please donï¿½t do everything so disk oriented - and Harddrives also have a loading speed with at least 20 or 25 kB/sec.

Thanx, Matt

4137. Atari Hard Drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-27 00:00:00 UTC
From: Scott <sboss@kennesaw.edu>
Message-ID: <329C6291.2005@kennesaw.edu>
Source record: 78500

Hello,

I just picked up a "SupraDrive - Atari Hard Disk - 20mb", and was wondering what it would take to hook it up to my 800xl or my 130xe? I think I need a "Black Box" or similar device. Is this true? I never had a harddrive for my Atari's before (last evening).

Thanks
Scott Boss

I know of a much more honest way to share the wealth... GET A
JOB!!! Sure you will end up paying some money to the
government, but look at all the wonderful services you get in
return!! And you will feel much better about yourself because
you won't be stuck behind a computer posting to 200 newsgroups!
You may even make a friend or 2!

As for an article changing your life... try giving a read to
the following -
http://www.gospelcom.net/rbc/salvation/index.html

It will take you a lot further and doesn't cost you $5.00

I had similar problems while connecting a floptical drive to a PC. First problem with this drive was that it wasn't detected when no disk was in it. Second, the disks had to be partitioned with MS-DOS FDISK, then FORMATted.

Richard Forester (forester@blarg.net) wrote:
: Hi. I just recently got an Atari 800 after not having one for ages.
: Anyway, I was wondering if anyone can recommend a good book preferably one
: with all the peeks and pokes listed as well as BASIC error codes.

I have the actual Atari-made OS and hardware manuals!

: Also, I have one question that I hope someone can answer. I wrote a
: program way back when and didn't document it well. I used GRAPHICS 28 in a
: line but when the program gets to that line I get an ERROR - 145. Perhaps
: I wrote this program with an XL or XE.

GR.28 is mode 12 full screen (12+16).
Even though the 800 can PHYSICALY suport that mode,the S: handler doesn't.
Error#145 means "bad screen mode handler".
Yuo'll have to go into text mode and modify the display list.
If 12 is the 40x24 IRG mode,then just switch to GR.0 and replace all the
2's in the display list with 4's.The OS will work properly with this since
ANTIC mode 2 and 4 are pretty much the same except how it interprets the
character set.

I am new to group and so pleased to see that there is a newsgroup where I may find the information I am looking for.

Can anyone help me with some simple questions.

I have just found in my bother-in-laws attic an old ATARI 800xl...no games

(1) Where can I buy old software...such as Archon , MULE, Bouty Bob and Miner 249er.

(2) Can I run this ATARI 800xl from PC...It looks like I maybe able to.

Please can anyone advise ?

Thankyou

Hello Atarians,

I am wondering if a certain card game is available for the Atari 800 computer. The game is Sheepshead (a.k.a. Schafkopf). Sheepshead is popular in Germany and south-eastern Wisconsin (Milwaukee). I am looking for my brother, he plays Sheepshead. Also, if anyone knows of an Atari ST version please let me know also. Thanks in advance.

p.s. Does anyone outside of Germany or Wisconsin know what Sheepshead is or how it is played, or have ever even heard of it? <grin>

> Hallo !

Hello. I am interested now in making games for the 8-bit. I have experience in GameBoy, so the only thing I need is a good assembler. I've got the Dis6502 but I don't know if I can program with it also. I am interested in Macroassembler or something like this, with documentation. Who can send it to me?
I have already got the Atari Reference Manual, and I hope it is sufficient to develop software for the 8-bit.
As a last idea, it would be good that the persons who are interested in making new games could be in contact, to interchange hints and help of all kinds.

Thanks.

Supra sold systems for the xl/xe and for the ST. The xl/xe models came with
a PBI interface; Bob Klaas has the rights to the interface and still sells
them. He posts fairly regularly to the newsgroup; he's usually happy to
help.

Q 1-4 deleted - I couldn't help with them.

>> 5. How do I make the software compatible with PAL machines?

The differences with PAL and NTSC have to do with the number of lines
displayed on the screen and whether they are using 50 or 60 Hertz.

If I remember correctly, I believe PAL has 625 lines/screen and they
refresh the screen 50 times a second doing 1/2 the lines each refresh
so they effectively repaint the screen 25 times a second. NTSC is
525 lines/screen with a 60 times a second refresh - again only half
the lines each refresh so a 30 times a second frame rate. This
would change the amount of time available during vertical sync pulse,
and the number of lines that need to be redrawn each time.

Hope that's helpful to those of you trying to deal with the NTSC
and PAL standards. Wayne Booth

Date: 1996-11-28 00:00:00 UTC
From: trythis@money.com
Message-ID: <329dfe60.89532396@news.inet-direct.com>
Source record: 78374

Thanks for taking the time to read this message! This is about a lady that gave all she could to everyone, including me. Her name is Wendy.

When I was young she became my foster mother after my real mother had abandon me. Never having any kids of her own she became a foster parent. That I got to be in her care was probably the best thing that had ever happened to me. She had other foster children and even ended up taking care of many of the neighborhood kids.

Wendy is a lady that just never gave up and always gave more than anyone could imagine. I no longer think of my real mother as mother but rather Wendy as my only true mother. I know that I'm not the only one that thinks that way either. It wasn't just kids that she helped it included the elderly, the disabled and the just down and out. What it takes to qualify for a saint is something I never found out, but I know it can't be more than the things I saw this lady do for anybody. Even people that had wronged her could find themselves looking up at her while she helped them when they were down.

I'm 26 now and many of the things I'm telling you I never really realized until now. Since I was a kid she has helped me with everything from recovering from my mistakes to just being there to say "You can do it... It'll be okay." I've never been able to make a good attempt at trying to repay her for all she's done for me and I'm not alone. Many people just have taken for granted the things she's done for them.

I know by now you're asking yourself why I've posted this letter. Well, to be honest and straight with you it's because I would like your help. If there's one thing that I've learned from Wendy it's that, "We are our neighbors keepers." You know the golden rule, "Do onto others as you would have them do onto you." Anyway now Wendy is an older lady that is disabled and can't do as much as she used to. With the disability sometimes expenses can be too much. I now live in Arkansas and can't be of much help. With no real family I'd like to do something to try to repay all she done for me and many others.

That's were you come in. See if you can think back to someone that helped you no matter how big or small. Maybe it's someone you can't even remember or have lost touch with. For that moment picture Wendy and say, "I'd like to repay that kindness." I wish you would sit down and write a small note saying "Thanks for being the generous person that you have been!" If you could include something to help out. Maybe it's a five dollar bill, a book of stamps, even a dollar. Oh and would you also tell her the Steffin sends his love. Her birthday is next month on the 27th and I'm hoping

I can make this own a very memorable one.

Thanks for reading and if you choose to help God pless you.
Her address is

Hello all,

I have an Atari 7800 ProSystem for sale. It comes w/ 2 controllers, AC adapter, TV adapter, 8 great games including Fight Night, Joust, Mario Bros., Galaxian, Asteroids, Karateka, Pole Position II, and other games. Make me an offer please, will sell! Just make it worth my time to mail it to ya!

Alex

Had the place that sells the controlers for $2.50 only sells in bulk for other businesses to sell to customers, then that's ok.

But this is a retailer that sells to the public, meaning it was ment for the public buyer. But if dealers will buy out stock from another dealer and sell for a higher price, then what's the consumer to do? If the price were barely higher then that wouldn't bother me, $5 would be fine. But for a ridiculous price that's way out of line, forget it! Then it'll be the same as ticket scalping.

BTW, I'm wondering if anyone with a ST computer still would buy a Jag controler with a good reason. I had an idea for a driver to use Jag pads in games that look for a joystick, but with the way the Atari scene is...looks awful bleak :P

Ok, if you can answer these questions, you're a stud.

First off, can SOMEONE hook me up with a copy of Floyd of the Jungle?
I desperately need to play that game.

And second, the really hard question... if you can answer this, I admire
you...

What is an "action wedge?"

I know the answer, do you

1. Look at http://mars.superlink.net/scharles/ (Jellystone park). It has
disk images and binary files from almost everything that was written for
the Atari. For use them, you'll need to connect the Atari to a PC (see
item 2).

2. Look at http://seka.nacs.net/~classics/ . There you'll find the APE
filesystem that manages the disk images (a file that mimic a real Atari
disk), and the instructions to build the needed hardware too (a SIO2PC
cable).

I'm using it for about three months, and it works fine ;^)

Werner
Brazilians have Ataris too!!

Sorry but you're wrong.

They were talking about ASDL. It will use existing phone lines but at
much higher frequencies. At those speeds, you'll be able to watch cable
TV through your phone line.

I have the following for sale in France (preferably, the kit's in Le Havre) or Britain:
- Atari 400 with 16KB, GTIA, original power supply, no manuals
- two BASIC books (can't remember titles off-hand, one of them by Paul Bunn with lots of games) in English, one in French
- BASIC cartridge
- I/O issues 2-4

Any offers considered, please include enough for postage. Also I can provide a Philips TX70 black-and-white TV (the aerial socket is for UK TVs, not French). Everything works fine.

Replies by email...

Stephen

>Supra sold systems for the xl/xe and for the ST. The xl/xe models
>came with a PBI interface; Bob Klaas has the rights to the interface
>and still sells them. He posts fairly regularly to the newsgroup;
>he's usually happy to help.

I am not sure what teh PBI interface looks like. The back of the HD
has 2 ports and one cable. The one port looks like a 25 pin parrallel
or serial port, the other port and the cable are same basic shape but
a few pins shy of 25 (I think). I am not totally sure about the
number of pins, since the harddrive is at home and I am at work.

Thanks for all the help,
Scott Boss

I have right here a flyer picked up at an Atari dealer around 1982-83. It has
full color pictures of various games and the Atari 600xl,800xl,1400xl,and the
1450xld,plus descriptions.
The specs on the xld: all the features of the 600xl AND...
64k RAM
TV & monitor outputs
4 programmable function keys
300 baud built-in modem
speech systhesizer
built-in double-sided dual-density drive.

wow, 300 baud.
randy

You'll have to have COMM's programs running on both the PC and your ATARI. Get a null modem adapter (or a cable which is null modem), and then connect the computers with the COMM's proggies. If you don't have a COMMS program on your ATARI, like BOBTERM or any other TERM, then you'll have to get one for it. If you have a US doubled 1050 disk drive, and a 5.25 disk drive on your PC, then get the file MYUTIL.ZIP from my homepage. This allows you to write directly to an ATARI D/D disk on the PC. I also have BOBTERM there if needed.

Steve.

I guess that "Star Fighter" is "The Last Star Fighter".
Did you know that ATARI released Star Raiders II, and this was almost
identical to "Last Starfighter"- had a few more things added tho.
Anyway, I have both these games if you want me to send them.
But you'd probably find them at Jellystone Park.

http://mars.superlink.net/scharles/

go to his FTP site, and look in the EXE directory. You should find
Draconus under EXEA-J (I think thats right- but you will see when you
get there). Ummm, Last Starfighter- not sure, have a look around.
good luck ATARIan......

In the spirit of the normal minutiae about obsolete systems that is the heart and sould of this group I would like to note that the atari 7800's joysticks were crap.

They were clumsy, non-intuitive, and hard for little kids to use. And they broke easily. The two we had went bad and we barely used the system.

To me the original 2600 joysticks were the very best ever.

Daniel Clinton

4178. Invitation To Join The QWK Net

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-29 00:00:00 UTC
From: tomhunt@bright.net
Message-ID: <329eb56f.7801547@news.bright.net>
Source record: 78391

-----BEGIN PGP SIGNED MESSAGE-----

Closer To Home Enterprises is happy to announce the grand
opening of the IA8N's QWKNET. IA8N = Independent Atari 8bit Network.
This network is ran by a group of volunteers that are dedicated, hard
core 8bit owners.

I am seeking more individuals to join the network.
Individuals who join this network will receive weekly, or biweekly QWK
packets through internet email. These packets contain messages from
member 8bit bulletin boards and from individual members of the
network. These packets are ARCed and UU enocoded. Both ARC and UU
encoders are readily available for almost every type of computer
system, including the Atari 8bit.

Highlights from recent message threads include:

A member's recent pilgrimage to Poland to meet with
various developers. He reports about a new IDE interface
and Sparta Dos X clone for the 8bit.

Discussions about the new HIP graphic format. Announcment
of the release of the new HIP slideshow program, and
where to download it.

Discussion about David Hunt's (no relation) release of
Carina 2.7 into shareware, and where to download it.

Discussions about how to use the 8bit to access the internet,
including hot 8bit places to visit. There are tips about
which lynx servers are the best to use, how to do dns lookups,
and free telnet bbses.

Discussions about Larry Black's soon to be released ZSEND
program.

Message bases that are currently available are:

General
Internet
Programming
Hardware
User's Groups
Whine Base
Recipe
Pets

When an individual sends back a REPly packet to the network,
ARC must be used for compressing the packet. But UU, HEX, and MIME
encoding of REPlies is allowed.

The message bases have thousands of messages, many of which
contain information and references to programs that cannot be found
anywhere, even on the internet. So join the QWK Net today. This is
a FREE service to the 8bit community. Ask about a sample QWK packet,
so that you can see for yourself.

Send inquiries to: tomhunt@bright.net

"QWK Net, an Atari 8bit network, 100% managed, maintained, and
published via internet email on an Atari 8bit computer."

My company, American Techna-Vision has a number of power supplies
available for the Atari 1450 computer (never released). These are
available for $14.50 plus shipping. Atari part number DV1450. Sorry
we no more prototype 1450's available.

For those with a more standard Atari 8-bit, we have the following
power supplies available:

Power supply for 800XL/600XL/130XE/65XE/XEGS . . . $9.95 ea.
Power supply for 1050/810/800/400/1200XL/XF551/850 $4.50 ea.

Shipping . . $6.00

Contact: American Techna-Vision

Im curious to which Atari system has the best graphics (NOT INCLUDING
JAGUAR). I may be looking to buy one depending on whether or not I already
own it. Currently the only thing I have is an Atari 2600, and am
collecting games and playing them purely for nostolgia value.

Hey, I wrote such a program - I adapted it from another one. You can
find it on the UMich archives, under the name FCOPY551.ARC. It works
with one-drive systems (if you have more drives, you don't need it)
Take a try!

4183. 8-bit Computers for Sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-29 00:00:00 UTC
From: Paul Mora <pmora@ibm.net>
Message-ID: <329FB2C3.65AC7AF8@ibm.net>
Source record: 78396
Cross-posted to: tor.forsale.computers,comp.sys.cbm,comp.sys.atari.8bit

Hello!

I've got some various 8-bit computer stuff for sale:

ATARI SYSTEM 1

- Atari 800XL
- ATARI 410 cassette tape drive
- power pack & T.V. RCA cable
- 8 cassettes with various games/programs
- standard Atari joystick
- no manuals, AS IS
- $10 (negotiable)

ATARI SYSTEM 2

- Atari 800XL computer
- Atari 1010 cassette tape drive
- Atari 1050 floppy diskette drive
- power pack & T.V. RCA cable
- standard Atari joystick
- various programs on diskette
- no manuals, AS IS
- $25 (negotiable)

COMMODORE SYSTEM 1

- Commodore 64
- 1541 diskette drive
- power pack & T.V. RCA cable
- Commodore 64 User's Guide
- dust cover for C64
- AS IS
- $30 (firm)

I've also got a VIC-20, just the unit without power supply, for
FREE.

These items are for sale to people in the Toronto area ONLY. If you're
interested, please contact me via email.

Thanks,

pm

4186. CTIA based playfield graphics

Newsgroup: comp.sys.atari.8bit
Date: 1996-11-30 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <57otq3$cvt@login.freenet.columbus.oh.us>
Source record: 78399

Now I've read the actual hardware manual that Atari put out.
(I have pages made to go into a notebook)
I see how ANTIC reads player/missle graphic data and sends it to the
CTIA/GTIA chip registers.I now know how P/M graphics can be done with out
ANTIC.

But how does ANTIC tell CTIa what PLAYFIELD graphics to display.I saw no
registers for the CTIA to display playfield graphics without ANTIC.
(this would be like how the CX2600 does it,since it has no ANTIC,only a TIA)

>any ideas, any 1200xl motherboards for sale??

I am not sure if the chips are soldered to the motherboard or
if they are in sockets. If they are in socket, try to take them
out one at a time, put them back and check if the computer
works. I remember doing this to a TTL circuit on a 600XL computer
once, and voila, the fault was fixed.

Anders

If anybody has any Atari 8bit (or 26/52/78) hardware boxes that are in an okay to mint condition, I am looking to purchase them. I am particularly looking for XL boxes with the styrofoam inserts. I have so many XL systems that I'd like to store them they way god intended to. =)

Also looking for the 1200XL owners manual in mint condition.

Please email me.

Karl

Source record: 78405

If you have the drive with 25pin coming out the back you have a drive that was made for the St not the 8-bit..

An Supra Atari 8-Bit drive..for the 800XL or 130XE would have a 50 pin ribbon cable coming out of it along with a small 2 wire power cord that goes to the Interface.

Reguardless it should have a Scsi board inside, either and Adaptec or an Omti Scsi controler along with the hard drive.

bob

```
: I have the following Atari XE Game System for sale:

: - Good physical and working condition
: - XG-1 Light Gun
: - Keyboard
: - Joystick (same as an Atari 2600 CX-40 joystick, but Grey in color)
: - XEGS unit with built-in Missile Command..
: - RF switchbox
: - RCA cable
: - AC adaptor

: ** $125.00 which includes shipping ANYWHERE in the continental U.S.A. **

Whew! That's more than the $99 Atari was selling them for new at
one point. Saw one of these setups in my local value village for about
$20 a few weeks ago. Similarly, saw an ST system with a disk drive for
under $100. Gotta love the net for price gouging!

Hi! I've added a bunch of new software to the Atari Archive at UMich.
Most notably, SIO2PC v.4.10 and a LOT of the Atari 8-bit emulators!

I've also created an "Education" subdirectory. If anyone has any good
educational software, please upload it! (In the "New" directory at the
FTP site, or simply e-mail it to me!)

Thanks!

Brian Robinson (brobin@freenet.columbus.oh.us) wrote:

: Im curious to which Atari system has the best graphics (NOT INCLUDING
: JAGUAR). I may be looking to buy one depending on whether or not I already
: own it. Currently the only thing I have is an Atari 2600, and am
: collecting games and playing them purely for nostolgia value.

Well, I would imagine it was one of the later ST's....

Atari 2600 graphics was 128 colors, 160 wide by up to 192 high (or so).

Atari 8-bit graphics is 256 colors, 320 wide by 192 high (number of colors
reduce with resolution, and it's paletted - 320x192 is 2 colors, 80x192 is
16 colors, all out of the 256 color palette - for more info., read my
FAQ: http://zippy.sonoma.edu/kendrick/nbs/new_and_emu.html)

I'm sure the ST had some ~1000x~1000 or so graphics, with up to 16.7m colors?

phantomm@harold.eastky.com wrote:

: Sometime ago I heard that there was a fix for the PAL incompatibility.

Actually, all you need to do is replace your ANTIC with a PAL ANTIC.
The output from your video port will be wacky, but all you need to do is
adjust your Vertical-Hold on your monitor/TV (if you're lucky enought to
have one.)

One problem, though, is some PAL demo coders test your NTSC/PAL status
by checking a bit in the OS. SO, you need a PAL OS (which contains this
bit, and also had a slightly faster key repeat value since the VBI's are
occuring less frequently) to run THOSE. >:^/

I wouldn't trust a software OS patch to get demos to run. Demos are
pretty much software TANKS. :) They usually ditch the OS anyway. :)

: long time..Reason? Well to be honest, there just isn't anyting in it
: for the programer.. No money why should they waste their time writting
: projects for something that will not return revenue.???

Actually, my excuse is lack of reasonable ideas and a lack of time.
I started a new game called "Bombi," but dropped it (I've still got some
cool 3D rendered 'posters' up on my walls, though. :))

My problem with ideas is blamable on my PlayStation. :) "Wow, wouldn't
a game like Twisted Metal RULE on the Atari!?" Well.. actually, Bill.
Since you kinda suck at programming the Atari, it WOULDN'T rule. :)

I'm actually interested in 'hiring' talent. Albeit, I would never make
commercial software, for exactly the reasons you describe above (no buyers),
so I don't know what type of compensation I would give the 'employees.' :)

Anyone interested in doing a game?

Marcin Lewandowski (jaskier@mat.uni.torun.pl) wrote:

: P.S. Tell me what kinds of fx don't work. Maybe I wont use they in my next
: programs. It is only I can do.

Just be sure your VBI routines end within 1/60th of a second. :) On your
PAL machines, you have a whole 1/50th of a second for code, but on NTSC
machines, the VBI ends before your code is done, so bad things happen:

Routines don't even work
Music gets messed up
The screen jumps (often in sync with the music :))
The computer crashes completely

If you REALLY can't afford that tiny slice of time in your VBIs, at LEAST
make your demos more menu-driven. If there are 8 parts to your demo,
and part 2 doesn't work (but parts 1, 3, 4, 5, 6, 7 and 8 DO), then I'm
missing not just part 2, but also parts 3 through 8! :(HARD SOFT did
this in some of their demos.

Hold SHIFT-CONTROL-OPTION-3, for example, to get to part three of the
demo. (Do this while booting.)

Very cool of them. :)

Good luck!

ALSO, I can't emphasize this enough (see my last post :))... DO NOT CHECK
THE O.S. TO SEE IF YOU ARE RUNNING ON AN NTSC MACHINE! I have a PAL 800XL
but it has an NTSC O.S.! :(PAL programs run fine!!! But if your program
sees the "NTSC" bit in my O.S. and says "Too bad!", I get pissed off! ;)

: but dont cry for wing commander
: or tekken... ;-)

: bye HeAvEn/Taquart

DAMN! DAMN DAMN DAMN! I love Tekken! :) I'd love to see a Tekken game on the XL, even if it weren't really 3D. Tekken is the best fight game ever. (If all you've ever seen was Street Fighter or Mortal Kombat or any of those other 2D games, they all suck in comparison).

Also, speaking of 3D, what ever happened to those "Doom" clones? The best I've seen is a relatively fast 3D maze DEMO <ARGH!!> with NICE Texture-mapped walls... BUT, complaints:

(1) No enemies
(2) Low res. (probably hard fix to ask for :))
(3) Maze - no real open areas (like in Alternate Reality)
(4) TURNING was smooth, but you could only WALK on 90-degree lines! :(
(5) No up/down (DOOM has up/down. This demo was more like Wolfenstein)

It's been a while since I loaded this demo, so.. sorry, I forget exactly which one it was. :(A very new (1996) one though!

It has been about six years since I last used my Atari, but after stumbling across some emulators recently I long for the good old 8-bit days.

A few years ago I remember talk of the existence of some Atari games that were never released, but were rumoured to have been written. For example, "Elite" and "The Last Ninja" (and surely manny more). Does anyone know if these games actually exist anywhere?

I have the following Atari Hardware and Software available as of
12-1-96

Antic Magazine Software Disks

BOOKS:
Advanced Programming Techniques for Atari by Linda Scheriber(orig
price $19.95)

Atari Programming with 55 programs by Linda Scheriber(orig price
$21.95)

32 Visicalc Worksheets by Ted Lewis (orig price $26.95)

Take any of the above books for $5 & SH or
Take all three books for $10 & SH

SOFTWARE:

Most include manual/instructions

1. THE NEWSROOM (5 disks with lots of clipart)
this is an excellent publisher $20 & SH

2. THE PRINT SHOP - a excellent bundle including:
The Print Shop
The Print Shop Companion
Three Graphic Disks
Holiday & Special Events Graphics Disk
No Frills Software Fonts & Borders 1

7 Total disks $20 + SH

3. TYPESETTER by Xlent Software $5 & SH

4. MAGNIPRINT by Alpha Systems $4 & SH

5. a 3 disk bundle by HI-TECH EXPRESSIONS include:
CardWare
AwardWare

AwardWare Graphics $8 & SH

EXCELLENT GAMES AVAILABLE:

1. KARATEKA by Broderbund
excellent Karate game $5

2. MICROLEAGUE BASEBALL(1984) $5

3. LEADER BOARD - Dual Pack
Excellent Golf Game includes
Double sided disk with the LEADERBOARD
on one side & Tournament on other $5

4. HACKER
a simulation games that forces a player to
hack their way into a system. This
game purposly comes with no instructions $4

Take ALL the above software in a disk case for $50 & SH

---

40 Blank 5 1/4 Disks $10 & SH
with disk case $13 & SH

Money order or personal check (with stuff being sent out when check
clears).

Buyer pays shipping.

Make offers including shipping.

Hi Leute !

Ich verkaufe eine 1050 Floppy in Originalverpackung mit SIO Kabel und
amerikanischem Netzteil gegen Gebot. Selbstabholer (Berlin) bevorzugt.

CU !

Freddy.

4222. WTB: All issues of Atari Classics

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-01 00:00:00 UTC
From: kheller2@ix.netcom.com
Message-ID: <57sde3$l7@dfw-ixnews2.ix.netcom.com>
Source record: 78418

If the back issues are still available from some "official" person/place, could someone give me the name and price for the issues. If not, would someone be willing to photo-copy me all the old issues? (I have several issues myself, except most of them are damaged.)

Thanks,

Karl

From: "Konrad M.Kokoszkiewicz" <draco@mi.com.pl>
Message-ID: <32A33F46.33CE@mi.com.pl>
Source record: 78269

I've recently downloaded a thing called GOE. It is supposed to be
a demo version of a graphical operating system for 8-bit Atari.
Unfortunately, the main file GOE.COM has a CRC error.

Does anybody know, where I can get the working version?

Many thanks

Draco

Bill,

don't be so nervous :)) As far as I know, there's no such flag inside
the XL
OS ROM. There aren't PAL or NTSC versions of the XL OS - the XL OS is
the
same for both machines. The only difference is the PAL register at the
$D014. It is definitely not in the OS ROM. It is a GTIA hardware
register.

Bye

Draco

I'm looking for a 8bit computer wargame that is similar to Eastern Front but takes place in Western Europe and Britain. It was made by Avalon Hill I think and was called something like"Third Reich". It came out after Eastern Front. I read a review for the game years ago and have been searching ever since. Can anyone tell me the name of the game and where I can get it?

Message-ID: <57tpsm$a0a@ccshst05.cs.uoguelph.ca>
Source record: 78341

: Im curious to which Atari system has the best graphics (NOT INCLUDING
: JAGUAR).

Well ... the answer is Jaguar, but seriously:

I may be looking to buy one depending on whether or not I already
: own it. Currently the only thing I have is an Atari 2600, and am
: collecting games and playing them purely for nostolgia value.

Are you talking about consoles or computers? With regards to
consoles, it goes 1) Jaguar, 2) Lynx, 3) 7800, 4) 5200, 5) 2600

Computers:

1) Falcon/TT, 2) STe, 3) ST, 4) XL/XE with GTIA chip, 5) 400/800
without GTIA chip.

The wedge for Action is a set of auxilliary programs (macros) to help you program. SpartaDOS also had a wedge set for adding additional commands.

As for the game, I don't know.

This is one way, but the SIO2PC/APE would probably be better. For the
null modem, all you have to have is a comm program on both machines
have one in originate (probably on the Atari side) and the other in
answer (PC side). If you have Bobterm, originate is dome with G from
the main menu. Be sure to have both systems set for 19200bps and ascii.
(actually the PC side could be on ANSI BBS.) Then upload the files on
one machine (y-modem batch is probably the best you'll have for x-fer
protocol) and download on the other. No big deal. I do this all the
time.

It seems to me that the site is up and down. I've managed to
connect to it using a Web Browser whenever ive been able to connect with
a normal FTP client. It appears to be sporadic at best. There is a
mirror site off of my 8bit homepage, located at
http://intrepid.mcs.kent.edu/~clisowsk/8bit.html.
The files are GNU gziped to save space.

The 1029 printer was only available overseas. Much like the 800XE and
XC-11, XC-12 tape recorders.

John

4268. WTB: Dragonriders of Pern (Epyx) with box and docs

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-03 00:00:00 UTC
From: marcgfrank@aol.com

I'm looking for a copy of Dragonriders of Pern by Epyx with box and docs, preferably shrinkwrapped. If anyone has one for sale or knows a vendor that does, please let me know. Originals only please.

Thanks!

>I'm sure the ST had some ~1000x~1000 or so graphics, with up to 16.7m colors?

Depends. The ST, as in 520/1040/Mega, had 320x200x16, 640x200x4, and 640x400 B&W. The TT had 640x480x16, 320x480x256, and the ST resolutions. The Falcon had 16-bit modes at limited resolution (I think the highest was 640x400 interlaced), and 8-bit at higher resolutions.

If you want a mode like ~1000x~1000 with 24-bit color on any ST, you have to get some form of add-on graphics card. As far as I recall, these were only available in the form of a VMEbus card; the TT030 and Mega STe accept such cards. (There may well have been cards for other models, but if there were I don't remember them.) The main problem with such cards is that a lot of software doesn't work with them. Only GEM programs will. Most games (especially those from the glory years of the ST) require the original ST modes.

Erm, we are talking about the same 8-bit Atari, right? The one that has a ~1.8 MHz 6502? That sort of puts 3D graphics on the level of Spectre or Twisted Metal right out of the picture.

ATARI XEGS

- Good physical and working condition
- XG-1 Light Gun
- Keyboard
- Joystick
- XEGS unit with built-in Missile Command..
- RF switchbox
- AC adaptor

Our used store up the road does have one I believe for $60.00 or so,
and I'd be willing to throw in an extra Atari 1050 Disk Drive with
cables and as many game disks as I can find blank 5.25" disks around to
put them on for an extra $60.00, add in an ATARI SX-212 1200 baud modem
for an extra 20.00 and I'd cover price of shipping in the U.S.

Is anyone interested in a DOS called "Happy-DOS II+/D"? I haven't seen this on any archive site for the 8 bit yet. It was published in the 3/86 issue of "Happy Computer" magazine in Germany (I got that one right here ;) and was declared "Listing of the Month" back then. According to the info accompanying the program, the concept is based on OS/A+ DOS, but developed from scratch.

If there is interest, I can translate some of the documentation and upload it to an FTP site "near you".

Bye,
Thomas

4281. HELP Troubleshooting 1050 drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-03 00:00:00 UTC
From: Brian Burns <b_burns@ix.netcom.com>
Message-ID: <32A4787B.756@ix.netcom.com>
Source record: 78294

I just purchased a 2nd hand Atari 800 computer and 1050 floppy drive. I connected everything as soon as I received it. The Atari works fine, but when I turned on the 1050, the power light came on, but I could not boot from a diskette. I know the cable is OK, because I am able to boot from my Rana Systems floppy drive. I have tried every drive select, and still nothing. When I try to boot up, the drive does not spin and the busy light does not light up. When I received the drive, there were no screws to the cover. Should I assume the PCB is dead and try to order another, or is there a way to troubleshoot it? Can anyone help? Thanks

Brian Burns

Just got a MIO (used). Version 1.1 ROM, 256k. I've heard of a hard disk cache program that's available; are there any other neat little tricks etc available for this? I'm running a 256k 800xl with SDX 4.21 and RTime8; no hard disk (yet).

Are there any prototype 80 column cards out there? Any docs on what the three sets of jumpers inside are for? Inquiring minds want to know!

As the DOC said, everyone needs this knowledge. Myself, though, I'm looking for detailed info on Happy commands that are available. So far I've been trying to reverse engineer the Happy Backup software, but if anyone already has the answers, it would make my job a whole lot easier. Any help would be greatly appreciated.

Is any of this included in the 7.x docs?

Ron Fries
rfries@tcmail.frco.com

P.S. Please e-mail me the 7.x docs either way. Thanks!

: came out after Eastern Front. I read a review for the game years ago
: and have been searching ever since. Can anyone tell me the name of
: the game and where I can get it?

Third Reich came out for the ST, but NOT the 8 bit. It was a computer
version of their very popular board game, developed in 1974.

The ST version is no longer supported, and they have just released the
PC version about two months ago.

Eastern Front for the 8 bit was the first War game simulation which
I saw on any computer. It caused me to buy the Atari 400 in 1982. I
don't think any better wargames came out for the 8 bit Atari.

I for the past few months have seen postings as to see my Sight with all the directions to receiveing Copyrighted Software.

I personally own the Copyrights to about 400 items..and would honestly like to know how different individuals can put up software that they and we all know is Copyrighted by someone?

I have been negocating legaly with different owners of Software to obtain those right to copy, re-produce ect..and many say they are not interested yet the same titles appear on different sights.

Does this mean that it is not necessary to obtain the right to the software and anything goes, or are these sights letting themselves open to Copyright infrindment and Suit?

While the Internet is relativly open to all, I am also aware of an Individuals rights to a Copyright for thier efforts..Does anyone in fact realise what they are leaving themselves open for in the event of a complaint?

Inquiring minds would like to know.

I have been on the Internet for over a year now and have seen many requests for Copyright infrindgments, any where from send me a scanned manual to actual files.

Those of you that partisipate in this practice make it damn hard for those of us that contact original Owners of the Copyrght to negociate terms for making these items avalable legaly. Sooner or later Congress is going to get into the act and restrict all of our efforts in this area and where the hell will we end up?

I sincerely hope none of you I have been associated with in the past year will be on the list of those being sued for Copyright infrindgments, I personaly cannot afford this nor do I believe you can either.

I know I want you want ect..perhaps a collective want will achieve the same effort without the ramificatons if persued in the right directon?

4308. Rocket Rush! in Donkey Kong Country 3 (Caverns of Mars)

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-04 00:00:00 UTC
From: fseipel@freenet.columbus.oh.us
Message-ID: <fseipel-3010962334570001@ts18-3.homenet.ohio-state.edu>
Source record: 78221

Has anyone played Donkey Kong Country 3?

I find the Rocket Rush! level strikingly similar to Caverns of Mars, with some graphics enhancements (15 years makes quite a difference).

First the player's barrel-ship drops, collecting fuel. Left and right thrusters are used to avoid the walls. If the player runs out of fuel, the barrel-ship drops and a life is lost. There is no provision for firing at enemies.

At the bottom of the pit, your ship contacts a barrel (bomb?), and then you begin to ascend the chamber. Unlike Caverns of Mars, you ascend the caverns along a different path than what you came up.

Of course, Caverns itself was very similar to the arcade game Scramble, as was Air Strike from English Software.

From: Ian Roberts <IR@WPO.NERC.AC.UK>
Message-ID: <32A575C3.3931@WPO.NERC.AC.UK>
Source record: 78227

Hi folks,

I've been looking for a while now for an old game I used to have on my Atari called Twilight World. I found an .exe copy of it on Yogi's site and got it into atr format but I think the original exe must be at least slightly corrupt because there are major problems with it - namely, that after you finish level 1 it simply goes back to the start of level 1 with a corrupt palette. This happens in both XLit and Pokey.

So if any has a working copy of this game in atr format I would be extremely gratefull.

Cheers

Ian

You're absolutely right. "Turbo Basic XL" also was "Listing of the Month"
in Happy Computer (no S!) magazine. The compiler was published in an Atari
XL magazine special in '86.

Bye,
Thomas

4318. Assembler question

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-04 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <5844le$ts0@usenetp1.news.prodigy.com>
Source record: 78231

You can get the manual for the Atari Assembler Editor cartridge as well as other books on assembly language at B&C Computervisions at 408-986-9960 here in California. My favorite assembly language book for the Atari 8 bits is "Atari Roots". By the way, if you really get into assembler programming, I'd suggest a macro assembler like Mac 65 from Fine Tooned Engineering, also available at B&C as well as other Atari 8 bit dealers.

4319. Re: Copyrights? Maybe So Maybe Not?

You're right that ignoring copyrights is a bad idea, but in fairness to many Atari fans, many of them are simply concerned that in the near future, the precious software will be gone. They don't realize that there are still Atari dealers open for business depending on our support. This newsgroup is a great place to keep putting the word out to those who didn't know.
Gotta go...

From: UASZ40A@prodigy.com
Message-ID: <5845tm$p7s@usenetp1.news.prodigy.com>
Source record: 78235

Scram is a nice example of what can be done with Atari Basic. I don't think the programmer even used any machine language subroutines. Atari 8 bit hardware allows color cycling which provides the flow animation. It's a good listing to look at if you're interested in Atari Basic graphics. Even if you get a copy of the game, you might want to spend 5 bucks + whatever they charge for shipping and get the cassette and manual from B&C Computervisions at 408-986-9960.

Bob, all these messages you are writing are starting new threads. I doubt the people whom you were replying (following up in rtin) to even realize you are talking to them.

Just because PRO! doesn't support threading of messages doesn't mean you should force the entire internet to bulge with 10 new threads on the same topic! Please consider the followup reply, or email reply, as apposed to the compose new message.

Source record: 78238

I recently downloaded a copy of S.A.M. (Software Automated Mouth) speech synthesizer. I would like to program some simple games which use the speech synthesizer and distribute them freely. Is there a copyright problem here? What is the policy of the author of S.A.M. regarding distributing games that use his software? I would appreciate any comments regarding this idea. Also, if anyone has contact information for the author of S.A.M. I would appreciate you dropping me a line.

Sincerely,

Thomas Main

> justin@imperium.net

I'm reminded of an old Monty Python bit about a children's program that
went something like...

Host: Well, kids, today we're going to learn how to play the flute. Sandy?
Sandy: You just move your fingers over these little holes, blow in this
end and the sound comes out over here!
Host: Fantastic! And now here's Michael to explain how to rid the world of
disease and hunger and acheive world peace! Michael?

...I would suggest getting one of the books on the Atari Assembler/Editor
Cartridge (there was one by Kurt Inman that seems to pop up for sale here
a lot). A reference book on 6502 machine language would also be helpful.
Finally, a copy of Mapping the Atari is essential. A lot of the old 8-bit
mags (Antic and A.N.A.L.O.G.) had articles on assembly language as well.
All of this stuff is out of print, but you can find it for sale here
frequently, or from one of the vendors in the vendors FAQ (try
http://www.cis.ohio-state.edu/hypertext/faq/usenet-faqs/html/atari-8-bit/vendev/faq.html).

This is not a trivial subject you are asking about, but this should get
you started.

Am I the only one here getting tired of the smart-alec replies to posts that their prices are too high. What is the matter with these people? Are they worried that someone else might make a buck, so they have to jump in and attempt to spoil a sale maybe to someone in dire need of an item and willing to pay the price? This trend seems to have become a game here. Granted, there have been problems in the past of a high priced marketer failing to deliver, but I've dealt with many 8 bitters in the past and found them to be the most trustworthy around.

>have one.)

What you will notice is a slight flicker to the screen. That is because growing up here in America our minds have been use to 60Hz, so we see a flicker. But when people from the US travel to Europe, their minds are able to notice the difference in the frequency (PAL is 50Hz). I've done the mod to my 130XE and it works great. The person who came up with this mod is named Nir Dary. His address is:

nirdary@pacificnet.net

It is suprising that someone didn't think of this mod long before. All the mod consists of is changing the ANTIC chip from a NTSC version to a PAL version and changing two bytes within the OS. You still use a NTSC version of the GTIA, the NTSC GTIA will generate the proper TV signal with the data it receives from the new ANTIC chip. The first byte that is change in the OS corrects the checksum of the OS so that the built in diagnostics won't fail. The second byte changes a value that the 6502 accumlator is compared to. I have the information written down at home in my copy of Mapping the Atari, I can email you the exact memory locations that need to be changed.

>One problem, though, is some PAL demo coders test your NTSC/PAL status
>by checking a bit in the OS. SO, you need a PAL OS (which contains this
>bit, and also had a slightly faster key repeat value since the VBI's are
>occuring less frequently) to run THOSE. >:^/

The changing of the bytes in the OS just corrects the setting of bits in memory for identity of a PAL or NTSC machine. If a program reads the low memory bit that is set, it would see the machine is NTSC. But if a program goes and reads the ANTIC chip hardware register directly, it would see you have a PAL ANTIC installed.

```
Here's what's left - some price reductions

New policies -

I pay shipping on all orders $15 and up.
You may examine for free for a week, keep what you want, and return
the rest (return shipping at your expense, however!)
Personal check accepted.

Prices are negotiable. If you take a lot, they're even more negotiable.
--------------------------------------------------------------------------

Infocom Text adventures. All in the bookshelf-style packaging (the
gray box with manual glued to opening cover, plastic cover holding
materials in.) "Hint" means I have the hint book and map. To my
knowledge, all the original items are present.

Asking price is $10 for each with hint book, $8 without. Hint book
and map alone are $3.

Leather Goddesses of Phobos Hint

Wishbringer Hint

Enchanter

Seastalker Hint

Infidel Hint

Cutthroats Hint

Deadline Hint

--------------------------------------------------------------------------

Other Graphics adventures
-------------------------

$15 The Pawn Firebird
Boxed with all original materials.

$6 Hacker Activision
In the phonongraph record-style packaging.

$6 Silicon Dreams Firebird
In the black plastic box.

$6 Jewels of the Darkness Firebird
In the black plastic box.
```

$3 NeverEnding Story Datasoft
No box, but the manual is included.

$4 Gunslinger Datasoft
3 disks. No box or manual. A hint sheet I downloaded is included.

$2 The Quest Dallas Snell ...
No box or manual.

$2 Transylvania Penguin SW
No box, but the manual is included.

$2 Spider-man Questprobe
No box or manual. I think this version has a bug - we couldn't
get the web-shooter to work. Cute game though.

$1 The Hulk - Never got it to run at all. Included with Spider-man
for free.

$1 Fantastic Four - I think this one has a bug, too - never was
able to save that rock creature or the fire dude, right at the
start. I even forgot their names. Included with Spider-man for
free.

Publishing, Printing

$8 Print Shop & Print Shop Companion, and some graphics disks Broderbund
(Just the Companion box)

$3 Cut & Paste Electronic Arts
Word processor. In the phonongraph record-style packaging.

$10 Newsroom + Clip Art Springboard
No box, but the full set of manuals is included.

$2 Partyware Hi Tech Expressions
No box. Manual is included.

Utilities

$10 Atari Macro Assembler & Text Editor Atari
Includes manuals for the assembler and the editor, and the cheat sheet.
No box.

$20 Visicalc
Includes high quality documentation, in the looseleaf notebook with
plastic looseleaf disk holder.

Arcade-style games - boxed with manual. Some "boxes" are cardboard or
vinyl albums.

$1 Caverns of Mars Atari
$1 Agent USA Scholastic
$1 Last V8 Mastertronic
$5 Golden Oldies - Adventure, Eliza, Life, Pong
Includes the book, with interesting articles about the early evolution
of home computers and home computer companies.
$3 Master of the Lamps Activision
$1 Run For It Weekly Reader Family Software
$3 Movie Maker Interactive Picture Systems
$2 Murder on the Zinderneuf Electronic Arts
$2 Astro-Grover Sesame Street
$1 Superman featuring Darkseid Main Street
$1 Dunjonquest: Temple of Apshai Epyx

Other disk, no box. Manual included where indicated.

$1 Grandma's House, Story Machine, Kidwriter, Kindercomp Spinnaker
(manual for Grandma's House only)

$1 Aztec Challenge Cosmos Manual
$1 Bandits Sirius
$1 Caverns of Khafka Cosmi Manual
$1 Crypts of Plumbous Cosmi Manual
$1 Dimension X Synapse Manual
$1 Dr Suess fixup the mixup CBS SW Manual
$1 Forbidden Forest Cosmi Manual
$3 Ghostbusters Activision Manual
$1 Kareteka Broderbund Manual
$1 Meltdown Cosmi Manual
$3 Mr. Do! Datasoft Manual
$1 Nautilus Synapse
$2 Pole Position Datasoft Manual
$1 Protector Synapse
$1 Rasterblaster Bill Budge
$1 Sea Bandit Gentry
$1 Shamus Synapse
$1 Sky Blazer Broderbund
$2 Tapper Sega Manual
$1 Tutti Frutti Adventure International

Tape, boxed with manuals

$2 Conversational Spanish (5 tapes)
$1 Frogger!

Cartridge, boxed w/ manual

$3 Computer Chess

Plus lots of carts. If I get motivated I'll type in the titles.
Otherwise, just ask.

I have copies of a German magazine that featured a 4- or 5-part series
about programming the Happy (and Speedy). I don't know how deep it goes,
but it looked interesting. The magazine is from '88 or '89, I think.

(Bob Klass wants to know. Re: Copyrights.)
The 'copyright' thread appears here in csa8, oh about every three months. It gets hashed over and over and over and over and over. Finally everybody just shuts up about it. From these posts you learn who are copyright 'purists' and who are copyright 'pirates' and who are middle of the road copyright people. Of course, I consider myself a middle of the road person.
I don't want to lose support from Bob Klass or Ben Smith or B & C Computervisions or Best or any of the vendors in the vendor list. I don't really like the thought of this copyright thread rearing its ugly head again. I think the best way to address this is just to address Bob Klass. I'll address Ralph Maddox or the owners of Toad or B & C if they show up.
There is no money to be made in A8 software. Bob Klass, as a collector, might like to own the rights to some Atari software, I think the rush of such ownership might be his primary motivation. Bob, I think if you purchase these rights, you are going to have one hell of a time proving how much money you have lost due to someone's distribution of it at a internet site. Second, it has already been shown in court, in my limited knowlege, that persons who put commercial software on the net are not violating copyright themselves, because there is no way of knowing if the people downloading are legitimate owners, merely backing up their legitimately owned software, or are getting copies of software they have no original copy of. Also, Bob, are you going to pay the people who cracked the software so you could copy it and distribute it? I'm sure you're going to need cracked software, because you aren't going to make carts or copy protected disks.
Mr. K probably won't like my attitude, and I really value having him as a source for hardware repair and purchase of hardware, but we all have to take our chances.

My philosophy, back in that demo I _almost_ coded on the Commodore, was
that the scroll, music, raster lines, and other time-dependent tasks ought
to be done with interrupts, whereas other high-powered effects and
graphics should be done in "what's left". This had the downside of
requiring me to push all the registers on every interrupt.

>scrolling and music-players should really be put into the vbi-routine
>because your ears notice every little delay of the music-player...
>and scrolling will not flicker if the effect routines need more time...
>
>btw. is it right that the music will be playing faster then on pals???
>because 60 vbis per second are more then 50...or?

It is true, but a counter should be able to slow it down 1/6 if it can
detect the NTSC-ness of the machine, by skipping the music routine one out
of every six frames. In fact, the scrolls and other VBI-related tasks
will also be faster. 1/6 faster might not seem like much but it can feel
like twice as fast, or at least just way too fast.

Doggone, Bill, you're evading the issue Bob raised <G!> I have a
position, well known, because I am an officer in two user groups. You can
figure out what that position is. Others seem to feel otherwise. An
international committee is now discussing a similar problem.

Anyway, it's good to see you here.

That's only been recent. Look, the holidays are coming, etc. I'm hoping the emulator developers will kick in again and the discussion can go that way, or that we wind up discussing copyrights, or even what makes a better boat anchor -- non-Atari machine A or non-Atari machine B! I might even have something important to contribute in the next month or so (Naaah! Really?)

How about something like a high-speed modem interface (and the software to drive it) using something like the MAX series of chips?

Look at the BrItIsH homepage; I think Craig has the info there. It's pretty simple: get a PAL ANTIC and slap it in. For some software, you might have to change two bytes of the OS to force it into PAL mode. That requires an EPROM burner, or the SmartOS mod in Atari Classics.

The 130XE doesn't have a paralel buss persay, you have to have an adapter board that converts the 2 cartridge ports on the 130XE to the 50pin card edge connector like the 800XL has. This is what I have, it allows you to hook a 50pin card edge connector to your 130XE. It also has a Cart port on it so you can plug in your carts.

ICD put out 1 with 2 cart ports, FTE bought those rights and no longer produce them, well maybe they will one day again if Mike gets back on his feet?

I hate to be a nitpicker, but I believe they were originally written for
the TRS-80 and later ported to the 400/800 and the Apple II. FYI, they are
archived at the infamous Yogi site
(ftp://ftp3.cyberspy.com/atari8/yogis_site/).

>Glenn Bruner
>brunergs@pcisys.net

If you replace the NTSC ANTIC chip with a PAL ANTIC, will there be any
problems running software that doesn't require the PAL ANTIC chip?
Instead of replacing the NTSC ANTIC, Couldn't One just Add a PAL ANTIC and
use a toggle switch?

Itï¿½s not a question of the software of the last two or three years.
What I want to have is a collection of all Atari-8bit-Software we can
get. I fear, that any program will be lost.

And , for us europeans, the net is in a lot of cases the only way to
have a look at these wonderful software without having trouble with
payment and pay a lot for shipping etc.

Thanx, Matt

P.S.: The most programs I donï¿½t just want to use, but only to have

You can write as many programs as you like and distribute them as you
like, as long as you don't incluse the S.A.M. program with it (as far as
copyright goes). The only part you include in the program is an ML
address reference for the strings that are to be pronounced by the
S.A.M. program.

Robert Stone (UASZ40A@prodigy.com) writes:
> I'm curious too. Hey Steven, is this going to be related to A.P.E.?

There may be an option for cassette image files in the next version, I'm just curious about how the 1010 operates at this point. I'm interested in producing a format that will allow emulation and at the very least a capability to reproduce a real tape from the file using a sound card.

Ernest S. (pooldisk) contacted me about it, and hopefully we will be able to come up with something like Bob Colbert's utility for the Starpath Supercharger that can produce .WAV files for playback or recording.

You may now question my sanity :) What can I say, its winter and im bored. :)

Steve

##

FAQ by

oO Oo oOOOOo oOOOOo oO Oo oOOOOo oOOOOo
OO OO OO OO OO OO OO OO OO OO
OOOOOO OOOOo OOOOOO OO OO OOOOo OO OO
OO OO OO OO OO OO OO OO OO OO
oO Oo OOOOOo oO Oo OO OOOOOo OO OO of Taquart

(.oO This is a preversion of the question-list Oo.)

Date: 29th, August 1996...Writer: HeAvEn of Taquart

1. What is HIP?

HIP is a new method to displaing pictures on small atari...

HIP stands for HARD-Interlacing-Picture and was found by
Members of HARD Software, Hungary in June, July 1996...

It enables to display 160 x 240 Pixels with 30 shades without
nearly all flickering (depends on the source-picture you use)...
HARD stands not for HARD or HEAVY Interlacing, just for the
inventors...

2. The History of HIP

Tamas Bene and I had a "EMail"-conversation the last few month and
we were talking about older demos and effects and suddenly we
have talked about the Visdowm II-Demo of JAC! where JAC had
managed to display 16 colors/shades in a resolution of Gr.15, which
means 160x200... We talked about the "unity"-demo where Our-5oft
switched 3 graficmodes in 1 scanline,
gr.8,gr.9 and somehthing similar to gr.15 by altering the prior-
register per DLI... what do you think happens when
writing #0 in that register at the beginning of a scanline, waiting
some time... switching to gr.9 by writing #$40 there and after
a little while in the last 1/3 of the scanline back to gr.0 by

writing again #0 into it... what does the GTIA produce?
not gr.0 (or gr.8...)as normaly... he displays something similar to
gr.15!!!

He then told me some stories of the coding-sessions of "Joyride" last
summer
and in the DIL-Plasma-Screen they discovered another "BUG"...but
Tamas had written down the FX and had forgot it... till we were
taking about GTIA-BUGs...

so we talked now about known GTIA-Bugs and the next day Tamas was
upset and told me he had discovered a new bug and he had reproduced the
DIL-"BUG"... he discovered that some scanlines were shifted by
a half (!) gr.9-pixel when the scroller starts and they didnt fixed
that BUG in the DIL-Screen...
But after reproducing this BUG he discovered that the reason wasnt the
scroller... it was the special display-list-routine...

3. Technical Infos conc. HIP

The basic idea is that all gr.10-lines were shifted by a half
color-clock (or pixel) by the GTIA and that always!!!! but noone
has ever tried to combine gr.9 and gr.10...
all have combined gr.9 (16 shades) and gr.11 (16 colors) to display
256 different colors (like in APACview)... but the resolution
was still 80x200...

So here is a ASCII-Description of the basic idea:

This is the combinations which are needed for the gr10-line and the
gr9-line to display the wanted HIP-color:

GR10 :000 000 000 222 222 222 222 444 444
GR09 :000 111 222 111 222 333 444 333 444
HIP :0.0 0.5 1.0 1.5 2.0 2.5 3.0 3.5 4.0

GR10 :444 444 666 666 666 666 888 888 888
GR09 :555 666 555 666 777 888 777 888 999

GR10 :eee eee eee
GR09 :ddd eee fff
HIP :d.5 e.0 e.5

and viola... here are 30 possibilites of shades...
Our eyes are averaging the two luminance-values by
interlacing the two lines each vbi.
---
but attention... in gr10 it is possible to select each
of the xl color registers (704-712), so in the display-

routine and the display-list-interrupt the color-registers
have to be set in a correct way!!!!

so if you look in the above table the values mean the xl-luminance!!!
example:

if we want to display HIP-color 6.5 then we have to set in the
gr.9-line the value 7 (in basic by color 7 plot x,y)
for the gr10-line there is the value 6 but... it would be
wrong to set the pixel by color 6... coz. we have just 8 color-registers
in gr10... so what about setting the color-registers
in the following way???

704 = 0
705 = 0
706 = 2
707 = 4
708 = 6
709 = 8
710 = 10
711 = 12
712 = 14

so... if we want luminance 6 then we have to set the pixel by
color 4:plot x,y !!!!!!! in gr.10 the pixel-value selects the
color-register!!! an empty/black pixel is not set by color 0 !!!
color 0 says to the gtia "put the pixel with the color which
is defined by color-register 704" !!! so if you have put 0 in 704
there will be a black-pixel visible...

But in gr.9 we can`t set 14 in 712 coz. in gr.9 register 712 defines
the basic-color... so if we want 30 grey-shades... we have to put
0 there... but in gr.10 there must be 14 there... hmmm... the solution
is a special DLI and Display-Lists...

1. vbi 2. vbi

DList1 DList2

gr9 (0) gr10(0) dli-bit set
gr10(1) gr9 (1)
gr9 (2) gr10(2) dli-bit set
gr10(3) gr9 (3)
gr9 (4) gr10(4) dli-bit set
... ...

(x) is the number of the scanline in each screen-ram...

so... if we loop this... we interlace between this two gr9 and gr10
screen-rams and we will have a hip-picture...but we have to set
the correct values in colbk $d01a (712, see above!!!)

1. vbi 2. vbi

DLI1 DLI2

```
pha pha
lda #$40 lda #$80 ; switching to correct gr-mode (gr9, gr10)
sta wsync sta wsync
sta gtiamode sta gtiamode
lda #0 lda #14 ;setting correct background-color
sta $d01a sta $d01a
lda #$80 lda #$40 ;switching to next gr.mode (see displaylist)
sta wsync sta wsync
sta gtiamode sta gtiamode
lda #14 lda #0 ;and dont forget the background color!
sta $d01a sta $d01a
pla pla
rti rti
```

so... this is the technique but there is a "big" problem by converting pictures...in gr9/10 each pixel is 4 "bits" large or a nibble and in a hip-pixel 2 of them (the overlaping ones...)

here an example:

```
gr.10: ..00002222...
gr.9 : 000022224444...
HIP : ..00112233..
```

remember: GTIA shifts the gr10-lines by a half gr.10 pixel!!!

so... we will always track one half of the pixel-value to the next hip-pixel... and this is the difficulty... the hip-colors are NOT able to be set free!!! there are restrictions like the main one:

two following hip-pixels should not have a difference of their luminace greater than 2 !!!! coz. then we could not set the right values and the hip-pixel will begin to flicker!!!

Best way is to use digitised source-pictures with smooth luminance for converting to hip-format... or raytraced stuff...

so try do code such a linear optimasation-algorithmus...

4. Converters:

they are avaible for the following systems:

unix coded by Tamas Bene from HARD
PC coded by Tamas Bene from HARD

Amiga coded and adapted by HEAVEN of Taquart
XL my algorithmus, written by HEAVEN of Taquart

For Converting you need:

-one of the above converters
-a paint-program which can produce pictures in REAL greyscale and 64 colors in a size 320x200

I think the new version of the bmp2hip-pc-converter can handle
bigger sizes and more colors...
-the 320x200x64 picture must be saved in Windows-BMP format
-a transfer program to XL
-a HIP-display-routine on XL

I hope I could help someone to do HIPing...

Heaven/TQA, 30.08.96

CrEdItS:

-Text by Heaven
-Algorithmus by Sanyi and Tamas of HARD
-HIP-Display-Routine by Tamas of HARD
-JAC! for inspiration...

ps. we have tried to do color-hipping but there is a difficulty
with the luminance of the xl-colors... the luminance is different
of some colors while setting the luminance to 0... so it
is HARD to calculate correct colors...but it is not impossible

Future stuff:

-converters which can handle several formats and colored-picture formats
by generating by themselves the greyscale values...
-color-HIP... a algorithmus to generate colored hips...
-maybe it is possible to interlace HIP and so we could increase
the amount of colors up ???

Many Thanx for all:

-Tamas Bene of HARD ...
-Slaves and rest of Taquart
-Gumi of Tight
-Marek Tomczyk for Websupporting

4364. Atari BBS List: 96-12-05 Update

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-05 00:00:00 UTC
From: oscar@justified.com
Message-ID: <MPG.d107dcbda91acee98976d@client1.news.psi.net>
Source record: 78260

```
Still looking for someone to keep this list. It's not too much
work - honest! -OMF

-------------

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was
checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

An asterisk (*) next to the board's phone number indicates that entry has
been updated since the last version of this list.

4365. Re: no more coders???? 50/60hz problem

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-05 00:00:00 UTC
From: nadkar <nadkar@zeus.fh-pforzheim.de>
Message-ID: <32A7638E.47D6@zeus.fh-pforzheim.de>
Source record: 78261

hi there...

in my demos i dont use the "normal" method and i am not
putting as many routines into a vbi as it is possible in 50hz...

theoretical my style works on ntsc without hanging the computer off
or "rolling" the effects around your monitors... ;-)

the main-loop looks like this

```
loop jsr wait ; check if vbi is ended
jsr effects
jmp loop

wait lda #1
sta 540
wait0 lda 540
bne wait0
rts

vbi jsr music-player
jmp vbiexit
```

i do not use my effects-routine in the vbi anymore, except music and
scrolling-routines, because if my routines need more time then i have
in a vbi then the computer doesnt crashes...and theoretical on non-pals
the routine begin to slow down...but not to crash...

scrolling and music-players should really be put into the vbi-routine
because your ears notice every little delay of the music-player...
and scrolling will not flicker if the effect routines need more time...

btw. is it right that the music will be playing faster then on pals???
because 60 vbis per second are more then 50...or?

bye HeAvEn/TQA

4366. Re: Too much 'for sale' stuff here!

Newsgroup: comp.sys.atari.8bit

atari.8bit.forsale would be a useful newsgroup. But I don't consider
the "FS: Atari 8 bit stuff" posts to be in any way near off topic. I
think it's great that we have place where we can find "hard to find"
hw & sw.

It may be that many people asking "ridiculous prices" have no idea what
the market value of their hardware and software is. You would have to read
FS posts here for quite a while to get a good idea what various items are
going for--and they only tell what people are asking, not what people
actually pay. It might be worthwhile to have an "index" of used equipment
prices posted here periodically, based on actual sale prices, of course.
I'm not quite sure how this could be done, though. Anyone interested?

I had a look at the DEMO version a couple of years ago. If the full working version was ever released, I'd certainly love to have a look at it, cause the DEMO just didn't seem to work quite the way it was intended. Anyway, I do have a copy somewherez around of the DEMO if you'd like me to send it to you.

>
>Brian Burns

I have had similar problems with at least 3 or 4 1050 drives in the
last 10 years. I've found the only real way to determine if the drive
is really dead, is to get another working 1050, and substitute the
main CHIPS (if your lucky to have them socketed). Change them one by
one until all have been replaced. If the drive still wont work then a
whole new motherboard would probably be the best answer.
To start with, try removing and replacing the chips before swapping
them with others- Sometimes the pins just lose contact and need a
little nudge :)

Hope to have helped just a little bit..
Steve

4371. Scott Adams Adventure Series

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-05 00:00:00 UTC
From: tom <tskahan@cmisinc.com>
Message-ID: <01bbe259$00529740$4ec002cf@ali>
Source record: 78267

Does anyone know where I might be able to find the classic series of 12 text adventure games by Scott Adams. They were originally written for the Atari 400/800. The games were in a series. I can remember a few names of them: Adventure, Pirate Adventure, Ghost Town, Mystery Funhouse, Stange Odyssey. They were also remarketed by Radio Shack under slightly different names. Any help would be appreciated?

Thanks

Tracy Lewin

Huh... What is the .HIP format, and does this mean there will be a new
version of JView that supports this?

: Hi Craig,
: I really appreciate your "mirror" site. I am having a lot of trouble
: using my Netscape browser to download your gzip files. Can you tell me
: how to set-up the browser so it will capture the .gz file to disk and not
: just display it on screen?
:
: Thanks from a long-term Atarian !!

Try right mouse clicking on the link. Select download link, or
is it "save link (as)". That should start a download of the file.
You can also go into the options/prefferences section and setup netscape
to perform the same action that it does on .zip/.exe files -- although
it might be a bit rough to do so.

(Blackat says Bob Klass should learn to spell.)
Personally, I'd a lot rather spell like Bob Klass than have
poor manners like Blackat. Mr. K. has been around a long
time and I'm sure he's aware his spelling isn't perfect.
The 'please' and =) don't reduce the offensivness of telling
someone who knows more about the A8 in his sleep than
Blackat will know in an eternity. Blackat is the guy with
the web site hardly anyone can view, because it is, or was
strictly 'Web Browser' stuff. Some people can't spell well
Mr. kat, and they are probably well aware of it. Some
people make comments about it and don't know how rude
they are being.

4376. pokey chip poly counter operation

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-06 00:00:00 UTC
From: ce596@torfree.net
Message-ID: <E1z3sG.Lo3.0.queen@torfree.net>
Source record: 78189

I have been working on writing a simple program to play pokey chip
sounds on the pc. While detailed technical information is available
in the 400/800 hardware manual including a schematic diagram of the
operation of the pokey chip it lacks a description of the
precise operation of the polynomial counters which generate the
pseudorandom bit patterns used to make the distortion.
I have experimented and i believe i have the exact formula which is
used. let x=0 then
x=((x<<a)+(x>>b)+c)%m
gives the next value of x, and x%2 is the bit used. if n is the #
of bits in the poly counter, then a+b=n and m=2^n. the sequence
of bits generated has a period of 2^n-1. acutally what this is
is just a circular shift, plus an addition.
I empirically determined the values of a,b, and c which generate
bit patterns matching those used by the pokey.
4 bits a=3 b=1 c=4
5 bits a=3 b=2 c=8
9 bits a=2 b=7 c=128
17bits a=7 b=10 c=98304
i suspect a similar formula is used for the atari vcs chips , perhaps
for other sound generation hardware

4377. For Sale

Newsgroup: comp.sys.atari.8bit

Cross-posted to: comp.sys.atari.8bit,comp.sys.apple2,comp.sys.apple2.marketplace,comp.sys.tandy,comp.sys.cbm

I have the following items for sale:

Hardware

Apple /// monitor, green monochrome composite video w/ stand. $15
Audiotronics monitor, amber monochrome composite $15
Commodore 64 computer, no power supply, NOT TESTED $12
Commodore Plus 4 computer, NON-WORKING, FOR PARTS ONLY $5
Okidata Microline 182 printer. $25
Star Gemini 10 printer, works but cover is cracked $10

Software
Timeworks Data Manager w/docs and box for Atari XL/XE or C64 computer,
Commodore program is on one side of the disk, Atari is on the other. $10
Pascal w/original binder/docs for TRS-80 Model III $10
Assembler-Editor w/original binder/docs for TRS-80 Model III $10
Budget Management cassette software w/original binder/docs for TRS-80
Model I or Model III. Also includes disk version for Model III. $6
Statistical Analysis cassette software w/original binder/docs $6
3 boxes of 8" disks, various formats. $10 for all

I also have many cassette cables for TRS-80 model III $4.00 shipped

Prices do not include shipping. All shipping is parcel post unless you
specify otherwise. All items are tested and in working order unless
otherwise stated. I will accept payment by cash, money order or check,
but shipping will be delayed ten days with personal checks. I'm in the
Dayton area. Please reply to one of the email addresses below.

That might not always be feasible. I have 2 dead 1050s, and the drive
mechanisms as well as motherboards are different (with some of the chips
being different)....before swapping chips you should make sure the two
drives are from the same production series (same mechs and motherboards).

> Well, I would imagine it was one of the later ST's....

> I'm sure the ST had some ~1000x~1000 or so graphics, with up to 16.7m colors?

NO WAY!!! The last ST model only had a palette of 4096 colors
from which it could only use 16. The resolution for this
palette was 320 x 200- called Low Resolution. Medium Resolution
had a slightly better display- 640 x 200, but could only use 4
colors from the palette. High resolution is really the ST's
equivalent of Mono VGA. It could display 640 x 400 but only
using 2 colors (black and white).

Try looking at the Falcon or TT.

Cheers,

Dave.

I sincerly apologise to Mr Bob Klass... I was out of line and
was being very rude. Since I do not know Mr Klass personaly I
really can not say anything about him, except that he seems to
be a very well renouned person and knows alot more about the Atari
8bit than I ever will...

Mr Klass: Please accept my apology, it was not intended as a slight
upon your person or as a flame, the comment was made under the
infulence of two Neo-Citrans and a bad cold so I was not in my best
frame of mind. Nonetheless though I hope there is no hard feelings and
I offer my sincere apologies..

Yeh, you've got a point there. I remember now trying to fit the top
assembly into another drive only to find the connector for the
stepping motor was wired up differently. I had to totally rewire the
connector in the end. They still have the same basic chips in each
drive, of course you can't interchange the US doubler with a standard
ROM without changing the jumpers as well. Thats what I meant tho, if
the chips have the same number then it should be ok to swap them
around. It doesn't really matter anyway, cause he doesn't have another
1050 to check it with.

If you were to grab another 1050 d/drive, it'd certainly make it
easier to track down the trouble in the non-working one.
As for pricing, I don't know how much difference there
would be between just the PCB board, and a full D/Drive.
Probably not much :) except for the shipping costs.
Steve.

FOR SALE: ATARI 1040 ST - SYSTEM AND SOFTWARE !!!
ATARI 800 - SYSTEM AND SOFTWARE !!! (Listed Below)

****
ATARI 1040 ST - SYSTEM AND SOFTWARE !!!
****

***** Best Offer ****** For Everything *****
(plus shipping costs)
Will sell components separately.

HARDWARE: Original boxes and documentation.

ATARI 1040 ST and ATARI SC-1224 COLOR MONITOR
ATARI SH-204 HARD DRIVE
ATARI SX-212 MODEM - 2400 Baud
SUPER CHARGER - TALON TECHNOLOGY (converts Atari to IBM format)
SF354 3-1/2" EXTERNAL FLOPPY DISK DRIVE
MASTER-5S 5-1/4" EXTERNAL FLOPPY DISK DRIVE
WIRELESS REMOTE CONTROL JOYSTICKS - (2 on 1 base)
(1) QUICKSHOT JOYSTICK (2) ATARI JOYSTICKS
* All hardware purchased in 1990. (except for 2 original style
joysticks)
* Original cost new in 1990 was $2,000+-

ATARI ST SOFTWARE: All original disks.
(All software believed to be in working order, but not guaranteed)

BOOT DISK ST LANGUAGE DISK
LANGUAGE DISK 1st - WORD
PROCOPY COPY II ST - Disk backup utility
PC/InterComm
SUPERCHARGER (images) ST Informer disks - 1291,192,392,492,592
REGIONAL COOKING COLLECTION AMERICAN COOKS CHINESE
ADDITIONAL PROGRAMS LOADED ON HARD DRIVE, HOWEVER NOT CATALOGED.

GAMES: (All in original boxes with instructions & 1 disk,
unless otherwise noted)

ARKNOID (instructions, no box)
DUNGEON MASTER (instructions, no box) -
(also comes with print outs of
maps and story)
MISSILE COMMAND (instructions, no box)
OBLITERATOR (instructions, no box)
(2 disks)
SUPER CYCLE (instructions, no box)

TIME AND MAGIK (instructions, no box)
The WRATH OF NIKADEMUS (instructions, no box) (2 disks)
WARLOCK (instructions, no box)
PRINCES IN AMBER (box, no instructions)
TIME BANDIT (box, no instructions)
XEVIOUS (no box, no instructions)
TEMPLE OF APSHAI TRILOGY (no box, no instructions)
ADVANCED DUNGEON & DRAGONS - HEROES OF THE LANCE
(no box, no instructions)
(3 disks)
ADVANCED DUNGEONS & DRAGONS - HILLSFAR (2 disks)
BARBARIAN S.D.I | The BLACK CALDRON (2 disks)
BLOOD MONEY | CHRONO QUEST (4 disks)
CRYSTAL CASTLES | DEATH BRINGER (3 disks)
DRAGON LORD | FOUNDATIONS WASTE (2 disks)
GATEWAY (2 disks) | GAUNTLET (2 disks)

What news group is this again? How many people visit this group and the
rec.video.games.atari group? Now multiply that by a few tens of thousands...
thats how many people don't know about the Jag or Atari anymore.

Why should I buy a Jag when my friends are playing Mario 64? I want to be
like them. (I own 2 Jags, 5 Jag CD rom players and just about every title
for it.... I don't own a N64.)

>
>Anyone have any info on how the pokey actually produces sound???

As far as I know, the POKEY uses a lot of division, by numbers and by "n".

Neil Bradley is working on an arcade emulator, which so far emulates mostly Atari vector games. Well, all of them are Atari vector games, really, but he won't admit to that. Anyway, many of these use the POKEY chip for their sound as well, and Neil is implementing sound in his next release. With luck, it won't consume too much CPU time and he can share his findings with everyone else.

Also, Ron Fries has written sound routines for John Dullea's "PC Atari", a 90% perfect Atari 2600 emulator. The Atari 2600's sound chip quite possibly has more different distortions than the Pokey, even, though I'm not sure. Yet the emulator runs quite tolerably on even a 486.

I'd sort of like some help finding information on what pitches produce which (diatonic) notes at which distortions, on either the TIA or the Pokey.

I have a previously reliable Indus GT drive that now boots up with
an H3 error code. The drive doesn't spin up and the head never moves.
The busy light blinks and then the H3 error code is displayed. I'd
appreciate it if someone who has a list could tell me what this code
means, AND how to fix it! :)

One thing I didn't mention about Yogi's site, which Mr. Klass addressed.
YOGI HAS MADE IT CLEAR HE WILL DELETE ANY SOFTWARE SOMEONE OWNS THE RIGHTS TO, IF THEY WISH.
That may not satisfy Mr. K, but it may be that if it is known that someone, anyone, is producing software and doesn't want it distributed, it will not be on Yogi's site. This includes, I think, most European titles.
This is a small, even if global community. I'm pretty sure word will get around if someone, such as Mr. K. owns rights and doesn't want his software up.

Talk about a bunch of hot air...

Maybe your conscience doesn't bother you, but I don't like to see
anyone gouge the hell out of buyers.

The fact is I've seen more than a few people trying to pass off used,
common, 8-bit stuff for horrible prices! And when I see that type of
thing I'm going to take it upon myself to comment to the seller and
anyone who is following the thread that there are better deals to be
had elsewhere.

The guy who had the XEGS for $125 bucks.. I can understand that.. I'm
sure he maybe didn't know that you could get them here or there for
$30-$40 bucks.. but then there are these people that consistently
charge terrible prices for stuff that isn't that hard to come by. I
mean.. were not talking about rare antiques here.

If you really want to save money you find most of this stuff at you
local thrift store or flea market.

It just blows my mind that people charge $100s of bucks for some of
this stuff.

4413. Re: HELP Troubleshooting 1050 drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-07 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <32AA146D.6A60@tcd.net>
Source record: 78135

The original poster actually didn't post enough information to evaluate the problem.

When the 1050 is turned on what happens. Does the busy light come on for a few seconds and then go out?

Does the Head move forward and reseat?

Other than the computer doesn't access the drive makes it very hard to tell one what to correct without actually seeing what the drive happens to be doing.

If he is getting nothing with the drive switches set at d1: which means with the cover off and looking at the drive switches from the front to the back both black and white portions are pushed (set) all the way to the right..? If everything else functions properly the busy light comes on and goes out, the head moves forward and resets you can hear this as well as see it with the cover off..then the is a chip at the rear of the drive. LM or CA 3086 which can be bad or the CO-10750 could also be bad, which would not let the signal come in from the computer.

If the busy light doesn't come on then it could be the 6507, or the 6810 or the 2793..

Maybe this will help?

After thought..those with Happy Drives and High Speed transfer fails replace the CA 3086 U-1 at the back of the board.

For spot-on TIA sound emulation (very similar to POKEY, the TIA has two
voices to POKEY's four), look no further than MacStella!

MacStella is a 2600 emulator which features the TIASoundLib library
written by Ron Fries.

I've got my computer and 2600 in the same room and was hard pressed
(besides the speed difference) to tell them apart, audio-wise.

side note: Am I the only Mac user in this group? It seems like all the
discussion here is about sound boards and types of Intel processors.
Thankfully, I never have to worry about these things, just load up these
great emulators and enjoy! I get close to 100% speed out of the 2600
emulator, with just an 80MHZ PPC.

PowerPC processor, built-in CD-quality sound and loving it,

Tony R.

> phantomm@harold.eastky.com

The PAL ANTIC is a superset of the NTSC ANTIC - by that I mean it supplies all the NTSC capability plus the PAL scans. NTSC screens will look a little different, maybe (aspect ratio, refresh rate, etc.), but at least they will work.

Not possible to use a switch to toggle ANTICs....

>Bob Woolley

The ANTIC in my 130XE is in a socket, so it would be simple to replace it with a PAL one. Which I would like to do, if the NTSC screens are stable. And have no lines running down the screen. I have the option to use the XE on a old Amdek Color I monitor or a Mag. Pro. RGB. Both have good displays, the Mag. being some what better, with more controls and etc. Correct me if I'm wrong, but I'm thinking that NTSC screens will be worse on a TV with the PAL ANTIC then on a decent monitor. Can someone who has done the PAL ANTIC replacement give some info on how NTSC screens look on a TV and on a monitor?
Most of my PAL software is demos and games. I can't justify giving up a good display just to run some demos and games. If the NTSC display is not stable and clear enough to do wordprocessing and similar applications then One could try to install PAL and NTSC versions and switch between them as needed. It would not be as simple as replacing the NTSC chip with a PAL one unless you can piggyback it. But I do think it's possible. Trying to do something like this depends on how bad the NTSC screens are when using a PAL ANTIC.
BTW, did you know that Atari made a PAL Translator disk for PAL TVs? I have 2 versions of it.

I say "ARRGGGGGGHHHHHHH!"

If so many people know so much about the 8 bit, how come the 8 bit emulators all are not 100%? (They're good, they're real good. BUT - none of them have sound). I would really really like to see the pokey emulated on a pc so that other things that use a pokey can be emulated (mostly atari arcade games).

Anyone have any info on how the pokey actually produces sound???

Please email to emu@synthcom.net

I have the the following up for auction at:
http://www.ebay.com/aw/item.cgi?item=crr241

Atari 130XE.
Atari 130XE w/ 320k and RamRod OS.
Atari 1200XL (Untested).
Black Box Hard Drive Controller w/ 64k Print Spooler.
Black Box Case.
20 Meg Hard Drive.
Power Supply for the Hard Drive.
Atari 1050 Disk Drive w/ US Doubler.
Atari 810 Disk Drive.
Atari 810 Disk Drive (Untested).
Magnavox Amber Monitor.
Atari 835 Modem (Untested).
Atari 410 Program Recorder.
Koala Pad (Untested).
Microflight Joystick.
Various Joysticks, controllers, Power Supplies and Cables.
Approximately 390 disks full of software, most double sided.
Book: Your Atari Comes Alive.
Book: Tricky Tutorial Series.
Book: Your Atari Computer.
Book: Mapping the Atari.
Book:Electronic Computer Projects.
Book:Atari Roots.
Book:De Re Atari.
Book:Atari Technical Manuals.
Lots of software documentation and Atari technical info

All works unless noted.

>
> Both you guys are dedicated people like Bob Klaas..Keep it so...
>
> Paul `Mclane` Irvine
> ----------------------
> PC, PSX , Atari8bit & C64

True... my comment about Bob learning to spell was definatly out of line and I have apologised to Mr Klass in an earlier post. I would prefer not to argue and would love to see the support for the 8bit continue as I personally still love the little grey/white/beige box (depending on the model)...

Again, my sincere apologies to Mr Klass, it was due too two Neo-Citrans and a bad cold that I made my stupid remarks... no excuse, but hopefully he will understand. No hard feelings I hope.

As for my web page, I was not really intending to make it 8bit compatible as I did not know that 8bits could access the WWW. I am looking into making a full text version when I have time (between school, my job at RadioShack and my g/f time is a sparse thing). But i hope to add some interesting stuff to the pages soon... It's not really been updated lately because of the aforementioned lack of time...

Will Fisher

btw: i will post updates here when the site is updated. Oh.... all the IMG tags should have the ALT="alt text" on them now for you text only people. =)

By the time the Jaguar was produced, Atari had NO funds for advertising.
The few infomercials they produced were "too little, too late." No
advertising --> no sales.

>Bottom line is: Atari 8
>bit newbies are a rarity.

We do get them in user groups from time to time. When we do, we try to fix them up with equipment. Prices are between the buyer and the seller, but tend to be on the low side.

Personally, I usually read FS, FT and WTB messages in this group very quickly and toss most of them out. I only notice prices if it's an item I know somebody wants or I haven't seen before. We've all seen those occasional posts from the Starfleet guy, and have been soured by them. I guess that's why people are edgy about high prices.

Used to be, we could go to a flea market if we wanted used equipment, or even down the block to a dealer for new equipment. Maybe people don't know what realistic prices are any more, and that goes for buyers as well as sellers.

Keep the conversation going. It may add to people's concepts of reasonable prices.

Yes, I am an Atari Newbie. I grew up in the age of the aging Nintendo original system, and 286 pc's.

Until I had done some extensive pricing, I would not have known how terrible the some of the prices posted were... also, it's a used computer market we're talking about here... I would like to see comments about prices if they are unjustified, so we may come to a consensus of what is reasonable for certain components.

4431. Re: Ummm, I'm a little confused

On 8 Dec 1996, it was written:

> I would love to read about how people use the 8bit. Word Processing?
> Email? MIDI?

If my Atari hadn't died, I had a kick-butt idea for music... using a conglomeration of all those old game sound effects into a song... I plan on buying one soon.

A few years ago, my church's membership database was on an Atari. Every month it would print out all several hundred addresses for labels on a mailing list.

The basic problem is that other computers are just better at word processing, e-mail, and MIDI.

The Atari is the perfect computer for some kind of geek setup, though, where you have computers controlling appliances and things.

> cartridge... ??

I had the opportunity to borrow one of those babies for a few weeks
about four years ago from a friend who has now moved away, and I can say
that it was quite a unique machine! It had basic AND missile command in
ROM. I suspect missile command replaces the self test, i dont remember
seeing the self test screen ever coming up.

I traded one of my disk drives (a rana 1000) and a bunch of disk games
for their light gun, bug hunt cart, and Flight simulator 2 on cart
(128K!). They work great on my upgraded 130XE's, and 800XL. The
coolest thing about the XEGS was the detachable keyboard, it was just
so... cool! :)

4436. 8bit custom chip specifications

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-08 00:00:00 UTC
From: Robert Pinchbeck <rpinchbeck@mindspring.com>
Message-ID: <32ABAC2F.242B@mindspring.com>
Source record: 78078

I've downloaded over a dozen emulators for the Atari 8bits (800 etc.).

I looked at the source code to several of them, and I wondered:
"Where did they get the specs for the hardware that they're emulating?"

The 6502 is easy enough to come by (I have several books on it)
But what about Antic? What about Pokey?
I looked around the web, but I can't seem to find any info on these
custom chips. The FAQs talk about design, layout, and interaction, but
not about the low-level details of these devices.

Anybody have a good starting point?
I'm stumped.

-Bob

Atari older computers can be used as a word processor, PeachTree did an accounting package for them complete with accounts receivable, accounts payable, employee witholdings ect accts payable on and on..price in the 80's $199.95.

Codewriter Software distributor came out with several items. One was construct your own programs in basic, simple easy to operate ect. They also had a Business Inventory program which I still use today..Limited to an Atari Printer but have one those..

They can be used for progarming, telecomunicating, running a BBS and many more things..Like burgular alarm, weather station There is even satalite data conversion for this computer, Ham radio software ect..in fact if one looks hunts can find just about any application the 64k computer will handle with little or no effort.

As to seeing you in court I doubt it..Copyright infrindgment in this area is to stir comments...

>saved." -John 3:17

I just got my 400 running last night!
Its 9 Volts AC. I found that a Nintendo power supply works great. It
must be for the original Nintendo (not super).

Only problem is the barrel plug is too small for the 400. You cut it
off and pick up a new one at RS for about a buck. Since its AC you
dont have to worry about polarity.

I bought the power supply at Funco Land a few days ago for $8.00. RS
sells them too but they are like $16.00 there.

Dont be tempted to go with another adapter thats even a little over 9
volts. The diodes are very sensitive and even 10 volts will fry one.
I speak from experience :)

>Daniel Clinton

Yea, this is true but the 2600 sticks were no great shakes either.
They could never stand up to more than 3 months of heavy gameplay and
they always gave me the infamous "Atari Thumb". I find controllers
that are comfortable for me to use and I modify them into compatible
controllers. Some Quickshot Nintendo sticks worked great on my
7800/130XE after I worked my will upon them.......

> appreciate it if someone who has a list could tell me what this code
> means, AND how to fix it! :)
>
>
>
>
>
>>>>
Humm, the manual doesn't list a 'H' error code. It lists only a
'G', GET or read error, 'P', PUT or write error and a 'F' FORMAT error.
and 'E' is displayed when no error has occured (Hold down ERROR
push button while TRACK push button is pushed).

Error 3= Lost Data Error
Error 4= Checksum Error
Error 5= Record Not Found
Error 7= Write Protect Error
Error 9= Verify Error

As for fixing it; I'd take it apart and reseat the socketed
chips and the connectors. Careful on the connectors as a couple
are flat flex foils that tend to break easily at the soldered ends.

Hope this helps; Rich Mier

Thanks to the cables from Rory McMahon, I am finishing up one of my last projects. An 8-bit program to copy from multiple disk drives to APE hosted ATR images. The idea being that some clubs have extensive libraries they would like on CD-ROM. And 3000 disks could take a while one at a time...

In this light, I am interested in writing a second program for the PC side using the PRO Cable to access the multiple disks, thereby cutting out the 8-bit all together. Anyone with source to donate to this project please drop me a line (ie I could use a simple routine or two to get sectors from atari drives like getsector(Drive, Sector, Density) or some such mechanism.

Thanx in advance,
Bill

I have been reading this group for about 8 months now. Does anybody out there use an Atari 8bit for anything other than playing games? All I ever read about is hardware hacks, for sale, stupid copyright stuff (I have downloaded a couple of cracked games, email me if you would like to take me to court), etc...

I would love to read about how people use the 8bit. Word Processing? Email? MIDI?

seeya
I'd rather be using my Atari

I have for sale the folowing stuff:

Hardware:
Zenith ZVM121 green monochrome composite monitor. works great. $20
Audiotronics amber monochrome composite monitor. $15
Multitech 300/1200 modem with power supply. $10
Okidata Microline 182 9-pin dot-matrix printer. $25
Commodore 64 computer without power supply, NOT TESTED $10

Books:
25 Advanced Games for the Commodore 64. $4
TI-99/4A Beginner's BASIC $3
TI-99/4A User's Reference Guide $3

Prices do not include shipping. I will only ship to US and Canadian addresses.
Payment must be made in US funds.

I've never messed with a 1030 but I would guess I used the
chain-device feature of the XL/XE os that was mostly ignored by
hardware developers.

The request for these handlers is what causes that extra delay after DOS
loads on the XL/XE, but not on the 800.

From: h0142kdd@joker.rz.hu-berlin.de
Message-ID: <58e6mn$kn6@joker.rz.hu-berlin.de>
Source record: 78152

I'm looking for an article that has appeared in ATARI ANTIC magazine, presumably around Fall 1984. It was a background article on the BTZ electronic novels (e.g. Mindwheel) by Synapse, probably including an interview with William Mataga and Steve Hales.

If anyone knows the exact ANTIC issue this appeared in, or maybe even has that issue and could provide me with a copy of the article, please contact me at <h0142kdd@rz.hu-berlin.de>. Thanks in advance,

Does anybody know how I can connect my Amiga1200 to the AWESOME atari
8bit?
I don't have a rs232 interface for the Atari.
I like to use the amiga as some sort of a diskdrive for the atari.

That's the key to this in your statement. Let's face it, the majority of the readers in this group are long time enthusiasts. I remember way over half of the names here from the mid-1980's from 8 bit bbs's all around the country. A tight group at the time. Bottom line is: Atari 8 bit newbies are a rarity. People here know whether someone is trying to make a buck or just supplying a system or periferels to another user or collector.

The seller probably already knows that fact as he most likely is still sitting on his for sale items for that reason.

>
> The guy who had the XEGS for $125 bucks.. I can understand that.. I'm

Agreed. The seller may figure that out from zero responses. Even informing him of the market situation I have no problem with. But flame bait wise ass replys don't belong here.

>
> If you really want to save money you find most of this stuff at you

> this stuff.

But do they really sell anything? Slight chance if another has no access to it anywhere else. At least it was available no matter the price or negotiations.

You may use the same interface as for the PC. Then all you need
is the software ;-)

>

Not a participant in these copyright chases, but with my very vague
understanding of current copyright law, damage claims in a suit are
limited to actual dollar value ... if one is giving the software
away, no dollar value involved.

A quick web search reveals:

:Copyright Crime Requires Intent to Reap Financial Gain
:
:Summary of Decision
:
:A federal court dismissed criminal charges against a hacker who posted
:copyrighted programs for free over the internet. U.S. v. LaMacchia,
:871 F.Supp. 535, 63 USLW 2475, 1995 Copr.L.Dec. P 27,344,
:33 U.S.P.Q.2d 1978 (D.Mass., Dec 28, 1994) (NO. CRIM.A. 94-10092-RGS)
:

In the court opinion:

:The Court dismissed the charge without a trial. Following a Supreme Court
:precedent, Dowling v. United States, 473 U.S. 207, 105 S.Ct. 3127,
:87 L.Ed.2d 152 (1985), and after a painstaking review of the legislative
:changes to criminal copyright laws from 1971 on, the trial court reasoned
:that criminal copyright law only prohibits infringement for commercial
:advantage or private financial gain, even under the Copyright Felony Act,
:18 U.S.C. sect 2319, 17 U.S.C. sect 506(a). (The former statute
:prescribes the penalties, the latter defines the offense).

My other post mentioned the lack of criminal penalties.

That leaves civil penalties, for which you would have to foot the legal bill. Reward would be limited to actual damages and profits, which if someone is giving it away, means no profits to claim against.

That leaves Stautory damages, which could be in the range of $500 to $20,000, which may be increased to as much as $100,000 if the violation could be proved to be willful, or reduced to $200 if the infringer was unaware, or believed to be within fair use.

Further, if the infringer is an agent of a nonprofit educational institution, library, or archive, and believed to be within fair use then no damages.

Now, quoting fair use pertaining to computer software:

:Section 117. Limitations on exclusive rights: Computer programs
:
:Notwithstanding the provisions of section 106, it is not an infringement
:for the owner of a copy of a computer program to make or authorize the
:making of another copy or adaptation of that computer program provided:
:
: (1) that such a new copy or adaptation is created as an essential
: step in the utilization of the computer program in conjunction
: with a machine and that it is used in no other manner, or
: (2) that such new copy or adaptation is for archival purposes only
: and that all archival copies are destroyed in the event that
: continued possession of the computer program should cease to be
: rightful. Any exact copies prepared in accordance with the
: provisions of this section may be leased, sold, or otherwise
: transferred, along with the copy from which such copies were
: prepared, only as part of the lease, sale, or other transfer
: of all rights in the program. Adaptations so prepared may be
: transferred only with the authorization of the copyright owner.

For inquiring minds: <http://www.law.cornell.edu/uscode/17/>

Bearing in mind that I am not a lawyer, and my remarks are purely my own thoughts, and worth exactly what you pay for them (nothing). Seek the advice of a lawyer if you have serious questions. So ....

If I were to choose to place copies of software I owned on a web site of my choosing, I could make a pretty good argument that I am doing it for backup purposes, and being able it access my backups from where ever my travels might take me. In fact, I do exactly that with my shell account sometimes, and strongly desire being able to access my whole home system for exactly these purposes without the constraints on size of storage available. The fact of a web site being publically accessible should not change any legal liability, as long as the intentions can be presumed archival in nature.

Now advertising such a site, by the site maintainer, may indeed be proof of non-archival purposes.

Legal costs, of course, are dependent on the size of your particular pockets .. and what risks of losing, one way or the other, you are willing to take, and what the benefits of winning might be.

All that aside, personally I tend to sit in the middle. In the field of Atari 800s, I am becoming more and more convinced that strictly enforcing copyright can only accelerate the decline of the amount of interest in the platform. Most of the current resurgence seems to be related to the emulators, and given the problems an emulator user might have determining whether a particular software package might work well or not on his system, I can understand the desire for a zero cost approach. Also, most packages which originally had copy protection must be run with copy protection defeated in one way or another (I hate copy protection .. it severely limits uses of software I own which are quite clearly fair use .. running on strange or unique disk drives, running on an emulator, perhaps modifying the program for my personal use in ways the author had not considered). Certainly, any revenues generated are not going to encourage new authors .. the market just isn't big enough. All the revenues can do is encourage support for vendors. Which is not a negligible benefit. But not one to gain widespread support. Hopefully you are not interested in actually making a profit, but merely to break even with expenses and perhaps some time value. I applaud your efforts and continued interest. I just can't see my way clear to condemn those who seem to be breathing life into the 8 bit Atari camp.

4465. Rana Sytems Disk Drive- Anyone with info on this?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-08 00:00:00 UTC
From: stev@networx.net.au
Message-ID: <32b7de56.3134789@news.networx.net.au>
Source record: 78159

I had a RANA disk drive some time ago, which I sold to a friend.
It stopped working on him, so I traded him another 1050 drive I had.
After opening the drive up to see if I could get it running, I found
that a chip had somehow worked loose, so I pressed it back in and the
drive works great now. My question arises from what I saw in the
drive. On the motherboard I noticed there is what looks like a
standard connector outlet to fit a PC floppy cable. Does anyone know
if this could be used to run a 720k d/drive from. Or does the RANA
need a special upgrade ROM to be able to access other drive types.
Just curious to see if this is possible..

(Somebody gets a 'H-3' error on Indus GT, R. Mier says take it
apart and re-seat the chips.)
Right, the book only says 'G'et, 'P'ut and 'F'ormat errors.
3 is a data loss error, but before you take it apart, try another
disk. I suspect your disk is not so hot. Make sure the cables
are in tight, or try another sio cable too. My Induses get
'intermittent' on read/writes, they just start not reading/
writing so good, then they sorta just won't do at all.
If you have important data on that disk, you need to try
another drive. I have readers, writers and formaters in
my disk drives. Some are ok, but a little 'weak'. This
stuff is aging, both the drives and the disks.

I think the majority of people here have either an IBM or a Mac that
they do most of their work on. As much as I like AtariWriter, I don't
think I will give up Word 6.0 anytime soon.

What I basically use mine for now is to mess around programming every
once in a while and playing games. It is also nice to be able to buy
all the little toys I couldn't afford ten years ago!!

Very funny. Nope, the MAX chips are a series that provide not only an
RS-232 conversion to TTL and vice-versa, but generate the voltages
necessary as well. The most common, and cheapest, is the MAX-232, but
there are others that are more expensive and faster. What's more, the
chips function with very few discrete components added. They are used in
such things as SIO2PC interfaces right now.

> computer market we're talking about here... I would like to see comments
> about prices if they are unjustified, so we may come to a consensus of
> what is reasonable for certain components.

I think there are cases here among people who price their
stuff too highly:

(1) people who don't know the A8 market and who may be trying to
price them fairly, but err on the side of asking way too much (like
$100 for an 800XL).

(2) People who don't know the A8 market but insist, stubbornly, on a
particular (too high) price for an item.

(3) People who know the value of an item and continually ask way too
much for it despite knowing their approximate value.

The people in (1) don't deserve to be flamed at all; they merely
should be informed that their asking price is way too high, and
that they should keep that in mind if they get no offers. Also,
this should be public to avoid any newbies being ripped off by
not knowing that there's little reason to pay more than about $25
for the aforementioned 800XL.

Those in (2) aren't trying to rip anyone off, but it's easy to see
how people can lose patience with them. You'd think they know
the way markets work--if there's no demand for what you're
selling, odds are quite good that your asking price is too high.

The people in (3) are really the ones who need to be taken to task.
These are the ones who, when they post their regular list with
their regular inflated prices, should be followed (IMO) by replies
stating that the prices are *way* too high. I'm not talking
about $35-40 for a $25 item here; I'm talking $75-100 and up.

If the old-timers and experienced 8-bitters want to keep the
platform alive, they will need "newbies" providing fresh blood
and a desire to write software which is maintainable, compact and

elegant. (Being forced, in most cases, to make things run in
48-64K will do that.) And if these people who have found an
interest in the old Ataris (or rekindled it after several years),
they will be the most enthusiastic and evangelical if their
experiences to "enter the fold" are good. Feeling ripped off
doesn't generate that good will toward the CSA8 community.

Flame away. :)

Thanks to Rich, James, Bob and Randy &Tracy for the feedback on
Indus error codes.

I was sure this was a main board problem because of how quickly
the error code came up and the fact that the drive never even spun up.

It turns out that the 2797 FDC chip is bad. I would think these
are pretty reasonably priced these days. Anyone know where I can find
one?

P-code rides again, now that the CPUs are fast enough that interpreting is
not a barrier to acceptable performance for a wide variety of programs.
:)

Of course, there are "just in time" Java compilers coming on the scene,
wherein Java bytecode is translated to native CPU code by a small compiler
just before it gets run on the user's machine. I guess interpreted
performance wasn't enough for some people after all.

I just cant see why everyone is so down on the XE keyboard... its not
THAT bad!! I really like it, but I admit it wasnt the best 8-bit
keyboard, but it was definately the most aesthetically pleasing..

I remember the first disk I booted on the XEGS was the GOS demo, there
was always a greyed out menu command called 'missile command' :) it
wasnt grey on the XEGS and did exactly what you would expect :)

hi guys... is there anybody out there who could manage to
emulate the xl with this emulator

this is avaible for unix,pc and amiga...

but on amiga i have installed (hopefully) all korrekt but
after starting i can select the chip-set (aga, ecs, ocs)...
then a window apears with copyright... and after pressing o.k.
the emulator quits with the error message
"operation system not avaible"

thats it...

bye HeAVeN/TaquarT

ps. the rom-images are in the object folder...

-----BEGIN PGP SIGNED MESSAGE-----

I'm pretty sure that the Amiga has a regular RS-232 serial port on
it. This means that the SIO2PC cable can be used and this takes care
of the hardware side.

I don't have an Amiga nor I am I terribly familiar with it's
software/hardware base so my next piece of advice is a bit more
dubious. There are several PC emulators available for the Amiga. If
the emulation is good enough, you may be able to run APE or SIO2PC on
an emulated PC on your Amiga.

Hope this helps

I have the following Atari 2600 Game Cartridges for sale:

[All cartridges are $3 a piece (or 4 for $10). Will take $50 for all
of them. Shipping/handling/whatever expenses not included.]

Adventures of Tron
Air-Sea Battle
Asteroids
Breakout
Casino
Combat (2)
Cosmic Creeps
Crackpots
Defender
Defender
E.T.
Fast Food
Frogger
Golf
Journey Escape
Joust
Kangaroo
Keystone Kapers
Megamania
Missile Command
Mouse Trap
Oink!
Outlaw
Pac-Man
Phoenix
Plaque Attack
Pressure Cooker
Raiders of the Lost Ark
River Raid
Sea Quest
Sky Jinks
Solar Fox
Space Attack
Space Invaders
Star Raiders w/ Video Touch Pad
Super Breakout (2)
Swordquest: Earthworld
Swordquest: Fireworld
Yar's Revenge

...and the following Atari stuff as well:

(5) Atari carrying cases (each holds 3 cartridges) ... $5 for all 5
Atari plastic holder box for 33 cartridges ... $10
Upright holder for 12 cartridges ... $5

Reply via email, NOT IN THIS NEWSGROUP (please).

Hi everyone,

I was wondering if a implementation of C ever came out on the Atari 8-bit? If not, I was wondering if it would be possible to do so? I heard there was a Pascal out for the Atari, but it required 2 disk drives and was pretty clunky. I would like to get my hands on either to see if I can still crank out some software.

Where can you get a copy of the commented XL/XE OS source? The 400/800 I've seen, but I'd love to fiddle around with the XL version... unless I'd have to disassemble it myself!

I was criusing through the neighborhood recently and rescued an Atari 400 out of someones trash. The only problem was there wasn't a power supply to go along with it. I used to own several atari 800 and 800xl's but I can't remember the input voltage they require. Could someone tell me what input voltage I need to see if the poor ol' 400 works?

How About people that like to write programs in BASIC? That's what I prefer. I've even done some stuff on PC Xformer, in BASIC. I converted one of me BASIC XL programs back to Atari BASIC. Nothing big deal, but it was fun.
I'v got to get my real 8-bit back on line. The hard drive stopped communicating and now the floppies. I think I have a bad SIO cable and the SASI controller seems to have done lunch. Maybe I'll get some time to get the SIO2PC on-line.

NOTE: The HAPPY rev. 7 docs are almost finished. I'll be posting shortly.

1200XLs and early 800XLs have chip sockets. I too recommend reseating
all chips in their sockets (don't forget the RAM chips near the front of
the computer).

You might have some fun programming in "Action". It combines features found in C and Pascal into a pretty nifty language. Unless the application you'd like to write needs floating point math, Action might be a good choice to consider. (An enhancement disk includes some floating point routine calls, but using them can be tricky.)
The Action cartridge and the enhancement disks called "Action Toolkit" and "Action Runtime Library" are available at B&C Computervisions at 408-986-9960.

Hi, I have a 130XE that i never use that i'd like to sell..

It works fine, comes with power supply, and i have an 810 disk drive that goes with it, it also works fine, has the SIO cable, but no power supply..

Both are yours for $30 plus shipping..

I also have a 130XE that has a few problems, namely that it goes straight into the self test mode on power up and i cant seem to get it out. It's probably whatever key sends it into self test mode is jammed, but since im too busy to check it out, its yours for $5 plus shipping... just get it outta my house. :)

There do seem to be a few of us here. I'll have to check out Stella...
I've been using Rainbow for over a year now, and the sound is pretty
close, except for certain types of noise/distortion effects. Most of the
screen shots of Atari 8-bit stuff I've seen on the Web were taken from the
Mac version of Rainbow. Chris Lam is one of my heroes. Now if someone
would do an emulator of the original 128k Mac so I can run MacPaint on my
PowerMac 7500... ;-)

Deep Blue C was originally an independent product, but it then
became available from APX. You ought to be able to find copies
of it by asking. It converted C to an intermediate code form and
then interpreted the intermediate form (a la UCSD Pascal and--surprise!--
Java in today's world).

Yes, OSS sold two different C compilers:
First was "Tiny C", similar in concept to Deep Blue C except that the
compiler was used to compile itself! First true language "bootstrap"
on any 8-bit machine (it was also available for Apple and CP/M machines).

Second was C/65. Actually, I think C/65 and Deep Blue C came from the
same original source: "Small C" from Dr. Dobb's magazine. Where D.B.C
chose to interpret codes that emulated the 8080 instruction set, C/65
chose to actually compile to 6502 machine code that (aha!) emulated
the 8080 instruction set.

So NONE of the C compilers were REALLY designed to compile to good
6502 code. Compared to Kyan Pascal and (especially) ACTION!, they
were all slow.

ACTION! was designed for the 6502 from the beginning. Things in C
that were (and are!) problematic in a 6502 were changed in Action.
Biggest change: No "automatic" variables. All variables are "static".

Reason: With the peanut 256 byte stack of the 6502, the usual convention of putting local/automatic/parameter variables on the stack simply doesn't work for a program with more than a handful of subroutine calls. Other changes: No floating point type builtin (though we did have a nice "library" that allowed you to use "struct"s to work with floating point). No arrays of objects (though you could have arrays of POINTERS to objects). If you do recursive subroutine calls, YOU have to create your own pseudo-stack.

Anyway, Action! compiles LIGHTNING fast and the generated code is also the fastest available for the 6502 short of machine code. (In fact, Action! compiled code that manipulates BYTE sized things--picture, sound, etc.--is often as good as or better than what beginners do with assembler.) In my opinion, Action should be THE choice if you don't want to use BASIC. I would choose it over assembler.

The bad news is that there's no tutorial for it. No way to learn it except trying and asking questions. And (nowadays, especially!) HOPING to get an answer.

Oh, and by the by...I think there was another Pascal available from Atari. Not as good as Kyan by a long shot.

>so... cool! :)

The ROM was a custom job: BASIC and Missile Command (hold Select or disconnect the keyboard to boot missile command). The OS was slightly changed as well; self test had the proper key layout. A nice machine, but the XE keyboard curse struck there as well.

(Newbie wants to know 'reasonable' prices for A8 stuff.)
How much is a '49 Studebaker worth? Probably a miniumum of
$25 or $50, but if in pristine shape, could be a collector's
item. The best you can do for any A8 item that you want is
do what you said in your post, look around for a while, sit
and wait and watch.
B&C has a 130xe for $175. I'd say that's the high end.
It is brand new, in box, you're buying it from a reputable
dealer with zero chance of being ripped off. CSS (Bob Puff)
sells a 320k 130xe with usp os for $250, if he has any.
And you're getting it from Bob Puff. Any problems are sure
to be addressed.
Probably you can get a used 130xe in good condition for
$35 to $75 bucks. You might find one in a thrift shop
for $10.
The $125 for a 65xegs is a high end, but, if the unit is
in good shape, and you are confident in the purchase,
it may be high, but it isn't a rip off.
The thing for newbies to watch is stuff like we had from
a particular person who kept showing up and had a very
bad reputation, ie. took people's money for stuff and
then didn't deliver.
So the best is to do what you said, look around and
keep your eyes open.
(I'd plug Bob Klass stuff, I mean he hardly is charging
shipping costs for some A8 stuff he mentions and he
definitely is reputable and all that.)

(R. Stone mentions ftp site or B&C for Scott Adams adventures.)
I'd venture to say that a LOT of people get stuff from ftp, see it
and want it, then try to find a legit, complete copy.
I know I got some stuff, children's games, some from Amer. Tech.
for cheapy. A lot of it was, well, crap, out of the box, legit.
Then I got some CBS Sesame Street games 'pirated'. Now I really
liked the games and very much wanted the keyboard overlays.
So I found them at B&C, very cheap and am happy (when I get them,
just ordered them)
As R. Tietjens said, the ftp site(s) maintain interest in A8
and I would venture to say, in some extent, cause people to
want 'originals' complete with box, docs, etc.

4515. Wanted: Atari 8-bit Games

Hello all. I am looking for the following Atari 8-bit games with docs:

221B Baker Street
Agent USA
Archon
F-15 Strike Eagle
Quest of the Space Beagle
Seven Cities of Gold
Temple of Apshai Trilogy

If anyone is willing to sell them for a descent price, please e-mail me.

Thanks.

Dan

>APX........

Kyan Pascal would run off a single floppy; it was the Atari (APX) version
that needed twin drives. There was also a later version that ran entirely
in 128k; no swapping between modules. Don't remember the name. There's
also another Pascal that was re-released as shareware, but the name slips my
mind right now.

Source record: 78030

Yes, there have been quite a few C language implementations for the 8-bit:

TIny and C65 - OSS as mentioned by God's Brother (Bill W. in the prev
mesg)
Lightspeed C - Hmm was it Lightspeed Software? Rember ARC 1.0 ?
Deep Blue C - Yes it compiles to P-code, but it wasn't that bad
ACE C - Deep Blue C's step son. Much better, some struct support
CC8 - ACE C with even more real C stuff, arrays of pointers
to structs
Required ACE C Runtime libs and Linker
CC65 - This is the beauty. Relocatable Object linkage files,
and the
most thorough K&R C for the 8-bit. Comes with an
excellent
Relocatable Assembler. Although KASM is compatible
and
much much faster!

Before I go one with the list... Please note that all the above are
subsets of older K&R C. There have been no compilers written (TIKO) which
conform to ANSI. For the unaquainted it simply means:

function proto types look like

fn_name(var,var,var);

instead of

type fn_name(type var, type var, type var);

Also the formal parameter list looks like

myfunc(arg1, arg2, arg3)
type arg1;
type arg2;
type arg3;
$(
...
$)

Instead of

type myfunc(type arg1, type arg2, type arg3){ ... }

Yes, the $($) replace the braces (since the brace characters map to the
SPADE and CLRSCREEN characters they are impracticle, although some people
have created special fonts with braces for these characters, for
textpro...)

The only compiler above which supports ASCII Braces and CR/LF combos as well as the $($) ATASCII LF is CC65 (Useful if you are trying to Port something)

Whew..

Ok, now on to the Cross Compilers

CC65, Yes that's right, the same one as on the 8-bit (I think JR Dunning had it compile itself <grin>) Available in UNIX Source at Umich, and IBM PC Version for DOS available from Kevin Foss "http://www.agate.net/~rfoss/kevin.html"

C65 (By Keith Ledbetter) This compiler does not support structs, boo hiss. But it does have the bestus 6502 macro cross assembler around. It is only available through the auther and NDA w/KP.

ORIC C Cross Compiler, An interesting 6502 cross compiler, not really intended to produce Atari code, but it can be finagled nontheless. Search for ORIC on the web. (ORIC is a neuvoretro 6502 machine, hobbyists kill me!)

There are also several commercial C cross compilers for the IBM (yes the above were mostly for the Intel PCs) But they will run you megabux and the aforementioned work extremely well!

There are also cross compilers for the ST and AMIGA which produce 8-bit code. Although I can't remember there names at the moment.

Anyhow, that's all I can tell ya about C and the 8-bit.

ANYONE WANNA GIVE ME AN ACTION CROSS COMPILER?
heehehehhhe

What's a "P133" PC?

: This is one way, but the SIO2PC/APE would probably be better. For the
: null modem, all you have to have is a comm program on both machines
: have one in originate (probably on the Atari side) and the other in
: answer (PC side). If you have Bobterm, originate is dome with G from

How can you set the "Null modem" for originate/answer when a "null modem"
is just a RS232 cable?!?

: the main menu. Be sure to have both systems set for 19200bps and ascii.

The P:R:C doesn't go at 19200 with BobTerm.It probably doesn't go that
fast at all!

: (actually the PC side could be on ANSI BBS.) Then upload the files on

"glass tty" or "tty" would be the setting for the PC side.
If you're running a BBS on the PC side to send files easily to the
Atari,you'd use VT102 (or something close to that) and FlickerTerm or
Ice-T on the Atari side.If the BBS only supports ANSI,then VT100 is close
enough to use on the Atari side.But a VT100 emulator on the Atari side
will probably use the standard character set (for VT100) rather than the
PC's unique one.(You might check out (the SLOW!) ANSITerm on the Atari)

: one machine (y-modem batch is probably the best you'll have for x-fer
: protocol) and download on the other. No big deal. I do this all the
: time.

If you're downloading to the Atari,you can use Atar-Z-Modem for Z-modem
transfers.But uploads must be done using Y-modem.(on a 64k machine,at least)

: > Well, I would imagine it was one of the later ST's....
:
: > I'm sure the ST had some ~1000x~1000 or so graphics, with up to 16.7m colors?

: NO WAY!!! The last ST model only had a palette of 4096 colors
: from which it could only use 16. The resolution for this
: palette was 320 x 200- called Low Resolution. Medium Resolution
: had a slightly better display- 640 x 200, but could only use 4
: colors from the palette. High resolution is really the ST's
: equivalent of Mono VGA. It could display 640 x 400 but only
: using 2 colors (black and white).

Incorect!The VGA "mono" is MONOCHROME,where as ST high resolution is
simply B&W.Since VGA uses 6-bit RGB,you'd get 6-bit monochrome on a
monochrome monitor.That's 64 shades.

So you really can have a lighter shade of pale!

P133 is a Pentium 133MHz PC. I use ANSI BBS setting all the time
with no problems. VT100 works fine too. In any case binary transfers
are best (Y/Z-modem) and if you can compress (ARChive) the files first,
you'll save x-fer time. When I said ANSI BBS, that doesn't mean running
a BBS (although you could). It's a setting similar to ANSI. It just
supports full 8-bit binary communication.
Doc, Is Atar-Z-Modem available for Bobterm? Where can I latch on to
this?

Which Amiga emulator are you using? There is one at the umich
archive called EMU800.ZIP that has been modified and seems to work well
on (and was recompiled on) an A2000 w/ Amiga OS2.? Willi K. did some
updates to the compiled version and it runs and runs faster than the
source (un-compiled) version would.

---------------(some stuff removed above)--------------

I missed a couple of things. You don't set the null modem to
originate/answer, you set the comm programs. One has to be the calling
party and one has to be the host/answering party. If poth are set to
answer (ATA) you get no communication.
You're right about the PRC not doing 19200. I got so use to using
my MI/O at 19200, I simply forgot. The PRC can do up to 9600, but you
need a patch to the R: handler to get that fast. I forget, but I think
the PRC abd 850 max, normally ar 2400 or 4800bps. I'll locate the patch
and e-mail it to anyone that needs it.I'll also post it to the Umich
archive.

Actually, no, this is not true. I've spoken to Scott several
times about acquiring the rights so I could put them on an Adventure
International page I want to start. Scott gave me his blessing as far
as putting them online, but said that really wouldn't help me very
much because he doesn't hold the copyrights anymore. He lost them
years ago in a bankruptcy court when AI went under. I've had no luck
tracking down the current owner.
I have several different versions of his titles. If anyone is
interested, let me know and I'll be more than happy to help you out.

Sincerely,
- Byron Followell

Yes, you want a "KO-REC-TYPE"(R) Spirit 80 model, stock number 3276-0.
I get mine from a business depot mega-store typathing. This particular model
can be used on what looks like about 80 different printers. If Atari isn't in
the stock database where you go, tell them to look up a ribbon for:
Accord DC80, Legend 880, Arrow 160, juki Super 5, Spirit 80, CM100, or
Mitsubishi Super VCP80.

randy.

Not as far as I know. You have to gunzip the files before transfering
them to the 8-bit. I doubt there are many people reading this newsgroup
who have no other computer, especially with the current prices for old
PCs. When I need to gunzip a file, I do it on my shell account.

OSS did produce C/65, which was discontinued about 1985. Supposedly, it was a subset of C. Deep Blue C was very popular, and definitely had subset problems (among other things). As I recall, there were 1-2 other implementations of C on the Atari, but they largely went unnoticed due to the decline of both Atari and the 8-bit market in general. Maybe someone else remembers these products?

Besides the original 12, Yogi's also has the Sorcerer of Claymorgue Castle (#13) and two of the SAGA Questprobe games: Buckaroo Banzai and Spiderman. He also some of the Questprobe series in text format. Still missing are the SAGA 1-6, graphical versions of the first six adventures, which I've been told were ported to the Atari. They're out there somewhere. The only one you won't be able to find for Atari is #14: Return to Pirate Island, I think that was only made for the TI or CoCo.

Incidentally, I recently wrote Scott Adams and found out he is working on a PC version of Return to Pirate Island with an expanded parser. I believe it will run on Windows 95. (Just some info for other Scott Adams fans)

Perry,

Our news server isn't very consistent, so all I received was the
following reply to your message:

cathryn wrote:
>
> In article <E1z3sG.Lo3.0.queen@torfree.net>, Perry McFarlane wrote:
> >I have experimented and i believe i have the exact formula which is
> >used. let x=0 then
> >x=((x<<a)+(x>>b)+c)%m
> >gives the next value of x, and x%2 is the bit used. if n is the #
>
> I'm really impressed. How long did this take you to figure out?

I'd be curious to see your original message. I've done some careful
examination of the output of the actual Atari and have created tables
which are the original bit patterns. I have tables for both the 4-bit
and 5-bit polys; I choose not to create tables for the 9-bit and
17-bit as they would have 511 and 131071 entries respectively!

I'd be curious to see your full algorithm and the results it produces.

Regards,

Ron Fries
rfries@tcmail.frco.com

P.S. I assume you need the polys for generating sound. I've already
created a set of routines which will do that based on my tables.
Let me know if you're interested. And be sure to reply to my
e-mail address. Again, our news server isn't very reliable.

4538. pokey chip sound generation

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-10 00:00:00 UTC
From: ce596@torfree.net
Message-ID: <E27stE.Bru.0.queen@torfree.net>
Source record: 78051

i see another post about pokey sound generation. ive been working on a
little project to make a program that can generate .wav files that are
the same as would be generated by a pokey chip. so far i think i have
been able to figure out exactly how the pokey chip generates its sounds.
bascially the key to understanding it is how the poly counters work.
there is a 4 bit, 5 bit 9 bit and 17 bit poly counter. the 9 bit
is enabled by replacing the 17bit counter. these are electronic cirucuts
that generate a pseudorandom repating sequence of bits. they change
state every chip cycle. the number of bits in the sequence is equal to
two to the power of the number of bits, minus one. so the 4 bit counter
has a 2^4=16,-1=15 a 15 bit sequence, the 5 bit has a 31 bit sequence 9
bit has a 511 bit sequence and the 17 bit has a 131071 bit sequence.
There are 4 8 bit divide by N counters for each of the 4 voices.
when these count down past 0 (to $ff), they generate a pulse. the clock
for these counters can be either the system clock (17.9 mhz) or it
divided by 28 or 114 depending of the setting of the AUDCTL bits. it is
also possible to join 2 of them to create a 16 bit timer. there must be
some delay in reseting the timer to its original value because when the
1.79mhz clock (fastest) is used the value of N used is 4 greater for 8 bit
sound and 7 greater for 16 bit sound than it would otherwise be.
the distortion is controled by 3 bits in the AUDCx registers for the
4 voices. bit 7 selects the 5 bit counter or no distortion. bit 6
select 17/9 or 4 bit poly , and bit 5 selects (distortion selected by
bit 6) or pure tone.
the first part of the distorition is the 5 bit poly. If a pulse has been
sent from the divide by N counter then IF the current bit in the 5 bit poly
coutner is a 1 then send a pulse to stage 2. if no distortion then just
send the pulse through without doing anything.
the second part of the distortion has a flipflop that remembers its output
state. if puretones are used, then the output= !output, the output
equals logical not the last output, so it generates a squarewave. if
either the 4 or 17/9 bit poly counters are used, the output is set equal
to the current value of the poly counter.
an important point is that the waveform generated depends not only on the
settings of which polycounters to use but also the frequency of the
divide by N counter. because the poly counters change state every chip
cycle, the sequence of bits used to generate the sound is related to
(number of cycles per pulse) MOD (number of bits in poly counter sequence).
so for the 4 bit counter which has 15 bits it its sequence, if the number
of cycles per input pulse is divisible by 3, a 5 bit subsequence of the
15 bits would be used. there would be 3 possible 5 bit subsequences that
could be used, the same sound played at differnent times would sound
different.
the highpass filter is fairly simple. when once voice is used for a filter

for another voice, when the filter voice counts down, a flipflop in the filtered voice remembers the current output state. if the highpass filter is set on this is then XOR'd with the output state(turning it off until the filtered voice changes).

I know that these are not the only SAGA games out there. I had the one
where you have crash-landed on a planet and must wear a space suit in most
places. I lost it when we traded our entire Atari 800 setup for a fish
tank.

Source record: 78054

I recently decided to fire up my 8-bit setup again, and used my Indus GT for a time. Boy, does it bring it all back! But when I tried to use my Happy 1050, I got no power on the drive at all. :(No light, no motor activity, nothing. I took the drive apart, and didn't notice anything loose; there's doesn't seem to be much in there that could come loose. A bug carcass came sliding out when I lifted the floppy drive from around where the head/spindle is, but that doesn't seem like it would cause a short. If this drive is actually shot, how hard would it be to transplant the Happy ROMs to another drive? I'm going to try my friend's 800 power supply, and make sure it's not a power supply problem.

Thanks for any suggestions.

(Dave ? says he got a 130xe and Indus GT for $7.50.)
Right, Dave, but would you sell them for that?
The original 65XEGS poster is probably long gone. I do think
it a good idea to read the group for a while before you buy
anything. That origainal 65XEGS post also had some other
stuff that went with it, I forget, disk drive or something.
The worst post I remember on csa8, along these lines, was
somebody didn't like something about a Salvation Army
A8 thing they were selling. He said he swapped price stickers
in order to get what he wanted, I think it was a cart
he wanted in a bag of 3 for $10 and he only wanted to
pay $2 for a single cart. Anyway, this person advocated
essentially stealing from a Salvation Army because he
didn't like something about the pricing.

Source record: 77973

(Talk about C and Pascal and ACTION!)
I want to mention CLSN Pascal. I prefer it to Kyan Pascal.
Only works on 128k machines. I tried both Kyan and CLSN and
quit on both of them. ACTION! is my choice for doing stuff
if I want it as fast as possible without doing assembler.
J. Harris's MAE is probably the assembler for real
assembler programmers. M/65 is new to me and I have hardly
used that. I can do ASMED stuff and make it a usr for BASIC.
Turbo BASIC is superior to Atari BASIC, but Atari BASIC is
what I use, mostly. So what if it takes 10 min to GET and
PUT a 12k file, I'm in no big hurry, my Atari BASIC
frequently takes longer to run than to write the code :>.
Then, if I want to speed things up, use ABC compiler to
compile the BASIC. I guess most prefer the MMG BASIC
compiler, which also does floating point and the ABC
doesn't. I'm definitely not a C person, or even C++ for
that matter. C/C++ is only necessary if you want to
understand almost any source code that is written in the
last 5 years.

The flicker is only because you are used to a 60Hz screen for as long
as you live. PAL screens are 50Hz. That's why many Americans find 'our'
TV-sets annoying when they come to Europe.

4555. Atari Sound Emulation (2600 & 8-bit)

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-11 00:00:00 UTC
From: Ron Fries <rfries@tcmail.frco.com>
Message-ID: <32AED5D1.2A2D@tcmail.frco.com>
Source record: 77976

Hi all -

Seems like sound emulation (TIA on 2600 and POKEY on 8-bit) is a standard topic for discussion. I've already created a set of routines that emulate both chips. There are some similarities, though there are some differences as well.

Both chip emulators are written in 'C'. I've also included some basic SB drivers in my emulators, though they have limitations. My main goal was to create routines that generate the buffers for sound output.

My routines do not use samples, but instead generate the output through an algorithm I've developed. It's based on some schematics I have of the internals on the POKEY chip. Though I had the schems, I still had to do a bit of investigation to make it work right (mainly for the poly tables).

Right now, the polys use tables, though I may change to use the formula developed by Perry McFarlane.

If you're interested in seeing either, just drop me a line. I suppose if I get enough interest, I'll just post 'em here. They're not too big.

Ron Fries
rfries@tcmail.frco.com

P.S. The TIASound routines are currently available on the Stella home page: http://www4.ncsu.edu/~bwmott/www/2600

4556. Peppers Dec Auction Update #11

4557. Amiga connection

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-11 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <58mjnc$2gtg@usenetp1.news.prodigy.com>
Source record: 77978

If you plan to try PC emulation on an Amiga to run SIO2PC or APE, I'd at least use one that has an actual 8088 or 80286 somewhere in there. If not, the emulation will be even slower. Remember, the stock Amiga 500 runs at only 7 MHz or so. The super graphics chips that make the Amiga special won't help much with this application.
I was wondering. Since the Amiga was designed by Jay Miner as a sort of super version of Jay's Atari 800, maybe an Atari 8 bit emulation on the Amiga would be a neat project. Has someone already done this? I know the Amiga uses sprites in a way much like Atari's player/missles, using vertical "stripes" of memory as an overlay. Does the Amiga have collision registers, color priorities, and stuff like that too?

Did I stray too far from the subject again? Oh well....

I know that these are not the only SAGA games out there. I had the one
where you have crash-landed on a planet and must wear a space suit in most
places. I lost it when we traded our entire Atari 800 setup for a fish
tank.

I'm looking for a straight (pencil-like) joystick for an Atari CX2600
as a Christmas gift for a relative - who has almost worn hers out.
Main stipulation - it has to be straight, and multi-directional, vs.
curved/fancy.

Sorry I don't have a specific part number for this, but if you can
help locate this, you'd give someone a merry Christmas!

Just email me - bev@atlanta-north.com

Thanks!!

On Wed, 11 Dec 1996, Scott Butler wrote:

> What's the object of this game?

First, you must collect enough diamonds to get the flame. The number on the right hand bottom tells you all many to collect. You can even use your flashlight to find chests with lots of diamonds and you press down to open them, but you can't collect the diamonds while using the flashlight.

Then the numbers will start counting down from 3000 and you must find the flame. You can tell if you're getting closer by the music been played. Again you must use the flashlight to find the flame.

After you found the flame, go to the throne room and kneel down before the skull(seen only with flashlight). It turns blue and you can climb up it.

Go right up to the chair and kneel underneath the crown. Once you got it, then get out of the room. The music will start playing and you have to get to the top of the moutain up near the big fire at the peak. Avoid the bats though, and you must get up there before the music is done playing.

If you're not sure about where the fire is, watch the demo before starting the game. Now go close enough so the screen is flashing and stay there, don't actually 'touch' the fire!

It wasn't that long ago when I ask the newsgroups how to play this game, so I'm returning the favor. :)

> P.S. Whatever happened to the 2600 manuals archive?

It's at http://www.sponsor.net/~gchance/2600Stuff/2600Docs/docsindex.html

But the instructions for Moutain King isn't there :(

I look for old computer hardware at thrift stores, flea markets, and used computer stores. I typically pay prices like $12.50 for a working 1702 Commodore monitor. I also got a 130XE and an Indus GT drive for $7.50. I picked up one working 800 for $5 and I got another working 800 and an 810 disk drive for another $5. I have had to deal with things like power supplies being missing and the like but the incidentals to make one of these work are neither hard to find or expensive. When I see people charging like $100 for a 130XE or similarly ridiculous prices I cannot help but think that they deserve the flames that they get (but then some people actually PAY that kind of money for this stuff so maybe the sellers know something I don't. As a buyer, I sure do look for more reasonable sellers though!).

The only way I can see high prices being justified are those charged for rare items and prototypes of vaporware. Sure $200 or even more may be justified for a 1450XLD but for a 130XE? No way! Even a 130XE in excellent shape does not justify that kind of price because they are common. You can find them for next to nothing. Even those in good condition. Even those with all accessories and original box.

Look people, these are dead computers. They are only of use to hobbyists like us that can still either get some use out of them or like to play with them. I can see no reason for flaming high priced posters. But I sure do marvel at 'em!

4572. Vintage 6502 Books

Hello to all,

I am in search of the following 6502 texts that were published many
years ago. If you have any of these texts and would like to see them
have a good home, let me know and maybe we can work a deal.

a. Programming and Interfacing the 6502 with Experiments.
Marvin L.DeJong, Blacksburg Press.

b. 6502 Assembly Language Programming
Lance Leventhal, McGraw Hill
(1st or 2nd Edition)

c. 65816/65802 Assembly Language Programming
Michael Fischer, McGraw Hill

d. Programming the 6502
Rodnay Zaks, Sybex

- And any others that I may have missed. Any pointers or offers
are greatly appreciated !

Many Thanks, Wally

Message-ID: <58l7kb$bri@kirin.wwa.com>
Source record: 78064

A couple of weeks (or months, I can't remember) I posted a message about using an Atari as a timer to control a household appliance. A couple of replys were posted and for that I am very grateful. One user even mailed me a program.

Unfortunately, I am not a programmer. I cannot modify software or hardware (yet, I'm working on it!). I know there are a couple of you out there who can do what I need.

What I need: The software and hardware to use an Atari as a precision timer. When I say precision, I mean that I need to be able to turn an applicance on for two minutes, and off for twenty (approx). I need to be able to continue that cycle indefinitely. The program would just ask me:

On for?
Off for?

A countdown display would be great, but it isn't essential.

I do have a couple of Ataris(unmodified) Disk drives, 850, all the goodies.

Remember, I would need the hardware to do it too, and I am not very technical. I have heard that I would need an Rtime8 cart. I would have no problem buying anything that I would need.

So, what would it take to get somebody out there to do this for me? I really have no idea what to offer, but I am going to throw out a number anyway. Please don't get offended if it is too low, like I said, I have no idea what to offer:

One hundred smackers. I came up with this figure at a rate of $20 an hour for five hours. I would buy any hardware of course also.

Any takers?

Email Eric_Cron@addus.com
thanks.

Message-ID: <199612110436.EAA05596@relay1.geis.com>
Source record: 78066

I have a couple of text files kicking around here on the ASM/ED cart
that were written by Mat*Rat himself. They summarize the commands, etc.
for those who bought the cart from ATV & others without docs. Very little
info on programming, but more on operation of the cart than I've seen almost
anywhere else. I believe they are the text of a couple of articles for Analog.
However, way at the top it says, "Released" and a date, so I assume Matt
put them into the public domain.

I would be happy to email the files if someone wants them. Genie won't
let me attach files to Internet mail, so I would simply email the straight
text.

Anybody interested?

Take a look at Atari's hardware manuals; they give a good deal of detail.
Best has the set for $15, I believe.

I hope that you know your GOD loves you, no matter what GOD you believe in. Thank your GOD for life and ask your GOD to let you live as your GOD would want you to. When we look closely at GOD we begin to realize that we all believe in the same GOD, we may see GOD in different ways, but GOD will always be GOD. There can only be one GOD, and that one GOD loves us all, and wants nothing but the best for us. If your in doubt, just remember GOD works in mysterious ways, there is a reason for everything...

God thank you.

4583. SW for sale... some additions and price reductions.

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-12 00:00:00 UTC
From: slackey@slackey-sun.lightstream.com
Message-ID: <SLACKEY.96Dec12092443@slackey-sun.lightstream.com>
Source record: 77996

A deal fell through so here's what I have left. Some price
reductions. Also, I found a few I thought I had lost - the disks were
in my Fooblitsky box.

Policies -

I pay shipping on all orders $15 and up.
You may examine for free for a week, keep what you want, and return
the rest (return shipping at your expense, however!)
Personal check accepted.
Prices are negotiable. If you take a lot, they're even more negotiable.

Infocom Text adventures. All in the bookshelf-style packaging (the
gray box with manual glued to opening cover, plastic cover holding
materials in.) All original materials are present except as indicated
(I checked an infocom web page for the list.)

Asking price is $8 each. No hint books are left.

Wishbringer - The wishing stone is missing. I have substituted an
interesting colored glass stone I stole from my kid. Who probably
lost the real one in the first place.

Enchanter - Complete

Seastalker - Complete

Infidel - Complete

Cutthroats - Complete

Deadline - Complete

Other Infocom:

$12 Fooblitsky - Complete, box not damaged at all. Includes all the game
boards (for taking notes) and all 4 original wipe-off markers.

Other Graphics adventures

$10 221B Baker Street
Boxed with all original materials. My wife played it a few times but
nearly all of the sheets on the pre-printed note-taking pad are left.
The box is a little bit crushed but is mostly OK.

$12 The Pawn Firebird
Boxed with all original materials.

$6 Hacker Activision
In the phonongraph record-style packaging.

$6 Silicon Dreams Firebird
In the black plastic box.

$6 Jewels of the Darkness Firebird
In the black plastic box.

$4 Gunslinger Datasoft
3 disks. Manual but no box. A hint sheet I downloaded is included.

$2 The Quest Dallas Snell ...
No box or manual.

$2 Transylvania Penguin SW
No box, but the manual is included.

$2 Spider-man Questprobe
No box or manual. I think this version has a bug - we couldn't
get the web-shooter to work. Cute game though.

$1 The Hulk - Never got it to run at all. Included with Spider-man
for free.

$1 Fantastic Four - I think this one has a bug, too - never was
able to save that rock creature or the fire dude, right at the
start. I even forgot their names. Included with Spider-man for
free.

Publishing, Printing

$8 Print Shop, Print Shop Companion, and 3 graphics disks Broderbund
(Manuals included. It's all in just the Print Shop Companion box.)

I also have an MPP-something (hardware) that allows you to put a
parallel printer onto the serial cable. It may let you print using
an inkjet printer, although I've never tried it. I'll include it
with Print Shop for an additional $5. I don't think I have any
manuals, but I have used it with a 9-pin printer so I know it works.

$3 Cut & Paste Electronic Arts
Word processor. In the phonongraph record-style packaging.

$2 Partyware Hi Tech Expressions
No box. Manual is included.

Utilities

$10 Disk-based SpartaDos. Manuals included. I used the US Doubler
upgrade that came with it on one of my 1050s, which is not included;
you get software and manuals only. I'll consider selling the US
doubled 1050, because I still have an XF551 for double density.
Original box and packing would be used in shipping, includes power
adapter and manual.

$10 Atari Macro Assembler & Text Editor Atari
Includes manuals for the assembler and the editor, and the cheat sheet.
No box.

$15 Visicalc
Includes high quality documentation, in the looseleaf notebook with
plastic looseleaf disk holder.

Arcade-style games - boxed with manual.

$1 Caverns of Mars Atari
$1 Agent USA Scholastic
$1 Last V8 Mastertronic
$3 Golden Oldies - Adventure, Eliza, Life, Pong
Includes the book, with interesting articles about the early evolution
of home computers and home computer companies.
$2 Master of the Lamps Activision
$1 Run For It Weekly Reader Family Software
$2 Movie Maker Interactive Picture Systems
$1 Murder on the Zinderneuf Electronic Arts
$1 Superman featuring Darkseid Main Street
$1 Dunjonquest: Temple of Apshai Epyx

Other disk, no box. Manual included where indicated.

$1 Grandma's House, Story Machine, Kidwriter, Kindercomp Spinnaker
(manual for Grandma's House only)

$1 Aztec Challenge Cosmos Manual
$1 Bandits Sirius
$1 Caverns of Khafka Cosmi Manual
$1 Crypts of Plumbous Cosmi Manual
$1 Dimension X Synapse Manual
$1 Dr Suess fixup the mixup CBS SW Manual
$1 Forbidden Forest Cosmi Manual
$3 Ghostbusters Activision Manual
$1 Kareteka Broderbund Manual
$1 Meltdown Cosmi Manual
$3 Mr. Do! Datasoft Manual
$1 Nautilus Synapse
$2 Pole Position Datasoft Manual
$1 Protector Synapse

$1 Rasterblaster Bill Budge Manual
$1 Sea Bandit Gentry
$1 Shamus Synapse
$1 Sky Blazer Broderbund Manual
$2 Tapper Sega Manual
$1 Tutti Frutti Adventure International

Tape, boxed with manuals

$2 Conversational Spanish (5 tapes)
$1 Frogger! - Complete

Cartridge, boxed w/ manual

$3 Computer Chess

Plus lots of carts. If I get motivated I'll type in the titles.
Otherwise, just ask.

Hi,

I have ne item left that I'd like to sell, although if I don't it'll make a nice addition to my permanent collection. EVERYTHING works. All cables and power supplies are included. Software included in package ranges from Altered beast, and Pascal to A BBS program and Swiftcalc. Please only inquire if you are interested and want to buy the system...for the whole thing: $120 SHIPPED!

-520 ST upgraded to 1 meg
-1 SC 1224 color monitor
-1 high res mono monitor
-2 SF314 DD
-1 mouse
-1 box of Atari disks (blank)
-100+ disks filled with archived and regular software

I am also willing to trade for Atari 8-bit stuff or old Macintosh stuff.

thanks for reading.

karl.

The Amiga's Copper chip is basically a very fance version of the Antic and GTIA. Both chip sets were designed by the same people and have very similar operation. I will look up the info on the copper for the specifics you asked for and get back to you tomorrow.

Be aware that this book contains a number of errors in the documentation of opcodes, and the descriptions of JSR/RTS are inconsistent (RTS is incorrect, if I remember correctly).

According to the Christmas 1996 issue of Amiga Format their is one it's
called merely "Atari 800". It was developed for Unix and ported to
Amiga.

BTW - I have a software only PC emulator for simple dos use, it's called
PC-TASK 3.1 and it emulated a 6 meg 9 mhz 286 with SVGA, high density
floppy
3 1/2 inch and hard drive. Not bad for $100. Also unlike buying a used
old PC, I can run it in a window on my Amiga, and run multiple copies
at once...

I'm a Mac user also. But my problem is that I'm using a Mac II with a Daystar Powercache 50Mhz 68030 processor upgrade, which puts it just under a Mac IIfx. I'm only getting about 15-20% speed of a Atari 8bit with my machine. Until I can get a Power Mac, I can't enjoy my purchased copy of Rainbow yet. I will admit though, Rainbow is the best emulator available on any machine.

4595. Iomega Bernoulli drive help

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-12 00:00:00 UTC
From: "Bruner, Glenn S., SSgt" <BRUNERGS@fafb.af.mil>
Message-ID: <32B11FBC@2sops.fafb.af.mil>
Source record: 78008

I was wondering if anyone has had any success in connecting a Iomega 44megabyte Bernoulli removable drive to a 8bit Atari with a Black Box interface. I recently picked some up and I'm having some trouble getting them to connect to my 130XE. These drives have the standard 50 pin SCSI interface connector that you find on most SCSI harddrives and use a 5 1/4 inch removable cartridge for the media. They are similar to Syquest drives, but are not totally compatiable. I have revision 7 of the Harddrive Bible, but it don't list this drive or the similar Syquest drive. I did try the HDFMT.COM utility that comes with the Black Box and selecting the SCSI Embedded controller selection. All I get is MODE SENSE failed and REQUEST fail messages.

I would appreciate if anyone out there can share any experience on connecting these type of drives to a 8bit Atari computer or if it is at all possible. I did try using the drive with my Macintosh and using the HD format utility I have on there (Silver Lining 5.53). The harddrive format utility on the Mac wouldn't recognize the drive. I ended up having to use Iomega's own special programs to make it work.

Thanks for your time.

Sorry to rain on your parade but the Atari 800, 800xl 1050 disk drives
along with the 810 disk drive require 9v AC! at about 5 Watts..Do not
connect a DC power supply to these unit or you will screw them up.

You can actuall attach an Atari power supply 9v AC to a 400, 800,
1200XL
1050, or 810 disk drive with up to 31 Watts..and not have a problem and
the higher the watts output the less the problem!

Sounds like you definataly have a power Problem? Borrow the 800's power supply, it it doesn't come up then possibly the diaodes 1 or more have crapped out.??

It wouldnt't be much to chang it out if you have another 1050..just strip it down..remove the shield..check where it plugs in and remove the required chips on the second drive. Replace the plug in board on the second drive and see what happens..if you can't get it up and running then I will fix it for $10.00 plus shipping both ways?

Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm,comp.sys.tandy,comp.sys.ti,comp.sys.apple2

I have the following items for sale:

Hardware:

Commodore 64 computer without power supply, works but screen flickers. $10

Okidata Microline 182 printer, 9-pin dot-matrix. $20

Audiotronics amber monochrome composite video monitor. $12

Zenith ZVM121 green monochrome compsite video monitor $20

Texas Peripherals internal SS/DD (180K) floppy drive for TRS80 Model 3. Also works with IBM-PC. $10

Texas Peripherals internal SS/DD (180K) floppy drive for TRS80 Model 3. Door missing but drive works OK. $3

Multitech 300/1200 baud modem with power supply. $8

Software:

TRS-80 Pascal for TRS-80 Model 3, original binder & docs. $10

TRS-80 Editor Assembler for Model 3, Original binder & docs $10

TRS-80 Budget Management for Model I or 3, Cassette for both systems, disk for Model 3 only, original binder & docs. $6

TRS-80 Statistical Analysis,cassettes for Model 1 or Model 3 (5 tapes), original binder & docs $5

Timeworks Data Manager for Atari XL/XE or C64 computers. Comodore program is on side one of disk, Atari program is on side 2. Original box & book. $10

Atari Silent Butler home bookkeeping software for Atari XL/XE. 2 disks, box, and manual. $7

Box of misc. about 10 misc. TRS-80 Model 3 disks, mostly games. $5

Books:

25 Advanced Games for the Commodore 64. $4.50
TI-99/4A Beginners Basic $3

TI-99/4A User's Reference Manual $3

Prices do not include shipping. All items are tested and working unless
otherwise stated. Payments must be in US funds. I will only ship to the
US and Canada. I accept cash, check or money order.

I recently came across a program called Paint Editor for the Atari.
It requires a translator to run on my 1200XL. I can't boot the disk
because it needs a data disk to start. I tried using a blank DOS 2.0
formatted disk, but that didn't work. Can anyone tell me what this
program is, and if someone could send me a blank data disk I will
pay for postage and disk mailer.

Thanks,
Justin

4612. Q: where to find 5200 cartridge roms?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-13 00:00:00 UTC
From: appleo@raven.cybercomm.net
Message-ID: <58r03p$gdg@raven.cybercomm.net>
Source record: 77926

I've got the Rainbow & VSS 5200 emulators w/5200 bios and need some games to play (16k, 32k)

These are hard to find/identify - every atari 8 bit site I've found only has like 1 out of 40 games that says 5200 (the rest I assume are for the home computers), and even those don't work. Still others are in *.atr image files. I've tried extracting single ROMs with a program called imageman but so far none of the extracted files or game5200.bin games run on either emulator. Rainbow gives an error "only runs 16k and 32k ROMs)" - the cartridge files are odd sizes, 9k, 17k, 11k, etc.

So where can you find the right files?

> your 800xl!
Well, I wouldn't go that far :). You are right, PC Xformer is crap (hey, Darek works for Microsoft, so what do you expect ;-)))?!?!?!?). However, emulators like XL-IT! or RAINBOW 95 are already quite good. Personally, I haven't used a real ATARI 8-bit for months - only emulators - and that should give you an impression of how satisfied I am with the way it is now.

I really wonder why people still want to get PC Xformer!!! Sounds to me like someone keeps misinforming people about the non-existing quality of that - erm - "product". Hm, I really wonder who that could be ;-))).

I think the main reason why people still talk about Xformer is the fact that you need the OS-files for other emulators. Now, I could be wrong, but is ATARI actually still in business over here in Europe (or the US)? I only know that ATARI keeps selling JAGUARS and LYNX games. Does anybody know more about that?

Ulf

Hi y'all,

I'm trying to trim down my collection of old computer stuff.
I don't want much for these books, I only wish to find a good home
for them:

Free Software for your Atari, by David and Dorothy Heller
Atari Explorer, Summer 1985 (magazine)
Atari Basic, a self-teaching guide by Albrecht, Finkel and Brown
Whole Earth Software Catalog 2.0 for 1986

I also have an old Atari 410 Tape Recorder I'd like to find a good
home for. I could ship it, but it would cost more than it's
worth I suspect. But if you live in the NJ area or along the
route from Central NJ to Boston, MA I can probably drop it
off. Email me if you can help keep this piece of history from a
landfill.

--Kevin

BTW, if anyone has extra copies of Antic v.3 #2 (May/Jun 84?),
v.5 #12 (Apr.87) I would love to buy them from you. Those two are
the only ones I'm missing except for volume one, which I suspect
is rather rare.

Not so fast. If you want a disk that boots up the right drivers and all that, you have to specify the modem you're using and any interface you might need too. And in the case of the SX212, you have to decide how you're connecting it, whether it's via the 13 pin SIO port, or the RS232 port.

In a Compute! book for the 800xl, it gives the source for a 16 bit
sound mixer(2 16 bit channels) you need to use peek/poke afterwards,
but...

I bet this would work on a 130xe, and it might give the desired
results.

Should I post the code?

4627. ATARI 1040 ST package for sale

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-14 00:00:00 UTC
From: Marvin Frandsen <frandsen@tng.net>
Message-ID: <32B2CCEC.61B9@tng.net>
Source record: 77940
Cross-posted to: comp.sys.atari.st,maus.biete,maus.sys.atari.talk,comp.sys.atari.8bit,comp.sys.atari.st.tech,maus.suche,alt.music.midi,fr.petites-annonces.informatique,alt.atari-jaguar.discussion,fido.ger.flea,nl.markt,rec.music.makers.marketplace

******* COMPLETE ATARI 1040 ST PACKAGE FOR SALE *******

* Atari 1040 ST

* SM 124 High Resolution (Monochrome) Monitor

* SupraDrive Atari 20 MB Hard Disk

* Epson LX-86 dot matrix printer

* Cut-sheet paper feeder to printer.

* Avatex 2400 Baud modem

* Universal Mac Inker (re-ink your printer ribbons to
extend life, virtually unlimited)

* Lots of extra printer ribbons

Software includes:

* Timeworks Wordwriter

* Publishing Partner

* Edit Plus ASCII word processor (e.g. for Internet use)

* STalker 3 Internet connection software

* Flash internet connection software

* Opus spreadsheet

* Fortran compiler

* C compiler

* Misc Atari software bundled with 1040 ST

Yes, it all works. Everything is in perfect condition with the
exception that the printer feeder can be a little flaky off and on.

Asking Price: $300 plus shipping, OBO

It's still around, the domain just got shut down by Internic--the
powers that be at SponsorNet say they have no idea why. At least I
know nobody owns it, hehe.

Anyway, you can access it via the URL I had before videogames.org was
made. See my sig below. :)

--
The History of Video Games Homepage is now accessible from its "main"
URL, http://www.sponsor.net/~gchance/! Please update your links while I
update the page...

I've seen instructions on how to do it in some of the Atari related Websites. There is an Atari 2600/7800 FAQ that gives details on doing exactly that. Unfortunately I don't know exactly how to find it. I needed info on how the two button sticks work (since I don't scrounge for impossible to find items like that, I build 'em). I found the FAQ after about twenty minutes of Webcrawler searching. It also tells how to get split Y/C and composite out of a 2600 as well.

4633. FS/T: Atari 8-bit computer items [12/14/96] {Christmas season special}

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-14 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <58v6ra$aq6@sjx-ixn9.ix.netcom.com>
Source record: 77946

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 12/14/96

NOTE: There are currently 1010 ORIGINAL game screen shots available on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories for sale or trade.

There are a few items that are listed as untested. When I bought these items I was told that they all worked, but due to a lack of time, I have been unable to test them myself.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

Christmas season special

From 11/27/96 until 12/21/96, all Computer item orders over $50 will receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST, Apple][, C64/C128/Vic-20, IBM, Tandy and TI. All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer systems. You can find those FS/T lists on my web site.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very

rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless specified.

NOTE: Since all cartridges are used, some labels will have small defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 5.50 Atariwriter
$ 4.50 Basic -- for the 400 and 800
$ 9.50 Delta Drawing (Spinnaker)
$ 6.00 Missile Command
$ 6.00 Space Invaders
$ 4.50 Star Raiders

Cartridges with case and manual:
$14.50 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE #1 FOR THOSE BUYING SYSTEMS: If you buy certain systems (they
are marked) you will have the option of buying a BRAND NEW RF
switchbox for $5 that is virtually identical to one sold at Radio
Shack for $7, plus tax. It allows for the connection of both 300 OHM
and 75 OHM antenna lead-in's.

If you already have an RF switchbox, most systems will work fine with
it. Some systems still include one, please read carefully.

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 800XL COMPUTER with original power supply.

I will also throw in a second non-working ATARI 800XL for parts, FREE.

This is a complete system, except for RF switchbox and RCA cable.

$39.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$32.00

*****

LOT #3

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 5.00

*****

LOT #4

ATARI 820 PRINTER, with one (1) roll of paper and built-in
power cord.

This item has not been tested.

$14.00

*****

LOT #5

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

$19.00

*****

To reserve any item(s) listed here, please contact me (please read
the SALES CONDITIONS section first). Thank you!

: >me to court), etc...
: >
: >I would love to read about how people use the 8bit. Word Processing?
: >Email? MIDI?

: I think the majority of people here have either an IBM or a Mac that
: they do most of their work on. As much as I like AtariWriter, I don't
: think I will give up Word 6.0 anytime soon.

Aren't Macs just "school" computers?Much in the same way that Pascal is.
I remember seeing one in a store once.I remember vaguely that you had to
manipulate little B&W pictures to do things.I about laughed out loud.
(B&W like a newspaper,not a TV)
Like a pictures of a sliding control to adjust volume or something.
I think Atari with MyDOS is a easy-to-use interface.
(if only DUP.SYS didnt re-load after loading every little binary file!)
The PC has a better interface than Mac.But the programmes are hard to use.
Klunky interfaces and no ERROR MESSAGES!
I mean if you try to load a file and something goes wrong,it won't
actually TELL you what it is.It'll just say "error loading file".
Or even worse,"file not found" for any error,giving you the impression
that it knows what it's talking about.
Also,you have to BOOT handlers.You can't just load your RS232 handler
when/if you happen to want to call a BBS.Of course this isn't a
problem,since there is NO RS232 handler!!!
Programmes access the hardware directly.
(which means that they won't work on a PCjr)
(yes,I know about FOSSIL,but that's a daemon,not a handler)
And the PC doesn't have P/M graphics.Nor a text winodw in graphics mode.
(that's why lots of games use 40col text.Because they can't use a text window,
and switching to 640x200 would be out of the question,they have to
bit-map the text on to the 320x200 screen.Hence,40columns!)

: What I basically use mine for now is to mess around programming every

At least the Atari has a (real) centralized OS.

: once in a while and playing games. It is also nice to be able to buy
: all the little toys I couldn't afford ten years ago!!

Me Too!I love buying stuff that I couldn't before.But now I can't find it!!!

But it's that error message problem with the PC that really turned me off
to it.Really painful when you run a BBS.I'd have to try out all sorts of
things to figure out what the error was.I'd love to port Waffle to the Atari!
(make the "files" command a seperate module)

Oh yeah,the incredibly HUGE slack!!!
Waffle keeps each and every message in a seperate file.But on
MS-DOS,sectors are huge.My HD had 8k sectors.A 512+MB drive would have 16k
sectors.A gigabyte drive would have 32k sectors!!!
(every time you double the size,double the sector-size.MS-DOS can only
have 65536 sectors("allocation units",really))
So my few megabytes of messages took up 20MB!
Oh,and you can't really un-delete files!
Well,enough PC bashing for now.

Mike LaRue (bandit@cdsnet.net) wrote:
: Does the XE game system have the basic rom with missle command? or
: is the missle command part of the OS.

Neither BASIC,nor Missle Command are part of the OS.They're just built-in
cartridges.IF the OS sees that OPTION is not held down when starting,it
swaps in BASIC.(swapping out 8k of RAM in the process)
If it sees the SELECT key held down,it swaps in Missle Command.
And,in case you didn't know,if it sees START held down,it boots off of the
cassette.

: >game here. Granted, there have been problems in the past of a high
: >priced marketer failing to deliver, but I've dealt with many 8 bitters
: >in the past and found them to be the most trustworthy around.

: > Jim

: I look for old computer hardware at thrift stores, flea markets, and
: used computer stores. I typically pay prices like $12.50 for a
: working 1702 Commodore monitor. I also got a 130XE and an Indus GT
: drive for $7.50. I picked up one working 800 for $5 and I got another
: working 800 and an 810 disk drive for another $5. I have had to deal
: with things like power supplies being missing and the like but the
: incidentals to make one of these work are neither hard to find or
: expensive. When I see people charging like $100 for a 130XE or
: similarly ridiculous prices I cannot help but think that they deserve
: the flames that they get (but then some people actually PAY that kind
: of money for this stuff so maybe the sellers know something I don't.
: As a buyer, I sure do look for more reasonable sellers though!).

I know what you mean!

: The only way I can see high prices being justified are those charged
: for rare items and prototypes of vaporware. Sure $200 or even more
: may be justified for a 1450XLD but for a 130XE? No way! Even a 130XE
: in excellent shape does not justify that kind of price because they
: are common. You can find them for next to nothing. Even those in good
: condition. Even those with all accessories and original box.

Aparently not in Columbus,OH!
I'm hard pressed to find Atari stuff.

: Look people, these are dead computers. They are only of use to
: hobbyists like us that can still either get some use out of them or
: like to play with them. I can see no reason for flaming high priced
: posters. But I sure do marvel at 'em!

They have the same usefulness as before.
The Atari didn't get small,the computer world did! <heh>

4642. JayMinor dead? What's the Story?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-14 00:00:00 UTC
From: Charles Richmond <richmond@plano.net>
Message-ID: <32B336A1.6642@plano.net>
Source record: 77955
Cross-posted to: alt.folklore.computers,comp.sys.atari.8bit

I recently read on <alt.folklore.computers> that Jay Minor died. Can anyone
give me any information--how did this happen, why, etc.???

FYI, Jay Minor designed the graphics chip set on the Amiga computer, and I
believe after Commodore bought the company he was a vice president. He also
previously worked for Atari and designed the Antic graphics chips on the 8-bit
Ataris. (I may have some of this wrong, so please post to correct or add.)

Message-ID: <58vcbd$i1a$2@mhade.production.compuserve.com>
Source record: 77956

Nick:

HIP is a neat graphics mode that interlaces GR.9 16 level gray screens with
GR.10 8 level gray screens. Effective resolution is 160x200 with up to 32
levels of gray. Some flicker due to interlacing, but less than COLRVIEW.
I'm working the changes to JVIEW, but a new version would not support both
HIP and all the other modes.

Source record: 77957

The screen you get from the PAL ANTIC chip is very stable and clear, but with some noticeable flicker. Lowering the screen brightness, over even your room ambient light level helps reduce this effect. I have found no incompatibility with any old NTSC programs at all, although key repeats are a little slower, and the "bell" sound is lower in pitch. The Bobterm clock runs slow. These observations were made in an unmodified OS. Note that some monitors and home TVs won't sync (Commodore 1702 and Magnavox color monitor sync fine at 50 Hz).

Goto comp.sys.amiga.misc and post these same questions there...I do know
that he is dead (for a few years now) and that he was a true genius. I
think you're right about the design work he did on the Atari 8-Bits and
the Amiga chipset. He also did a lot of other work that was very, very
beneficial to humankind. (Pacemakers, I think) I still have an old A1000
that I keep simply because it has his signature (as well as the rest of
the team) on the inside cover...Later! :)

Not sure if you are asking me or not due to the message you sent. If so I have been fixing Atari since the early 80's, helped one of the better dealers at that time get his Atari Repair certification, but his luck ran out and he demised at an early age from cancer.

I have the Atari Repair Library for most of the older 8-bit stuff complete with diagnostic error codes ect. I also have the chips to use the Scope on the Rana disk drive's mother board and the manual which I am pretty sure is long lost by now, along with the Indus Repair Manual with tech notes before Indus went out of business the first time..

Ok So I LIED!...

JTS, owns all the copyrights Atari Corp held. Reason I know is that I have been talking to them within the past couple weeks. They JTS still place value on those rights. I am not an Attorney but I think if you or anyone that wants to have accurate information would check with one will find that If YOU, by your actions of placing their Software out to the public with or without charges being received, you in fact impeed their sale of the product they own the rights to and they have the right to take legal action to regain lost sales???

Just an opinion, not fact but from what I have been advised I will reguard it as fact and seek the Owner of a Copyrighted product permission with compensation prior to my releasing anything now owned by myself. And will have it backed up in writting..ie: contract of some sort.

One would need a little more information on your system in order to set up a communications program for it complete with autorun.sys ect..

What are you useing as a modem? Interface to the modem ect..would be most helpful..

As to the communicatons program several out there in public domain shouldn't cost you much to have it set up to boot from disk..I use to use Smart Dos to set up several inline autoruns, when I ran 850 Express.

4665. SpartaDOS users

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-15 00:00:00 UTC
From: Nelson@cybernetworking.com
Message-ID: <850662176.8884@dejanews.com>
Source record: 77968

If you are a SpartaDOS 3.2/X user you may want to receive my NN Tools programs. Among these programs are direct IBM/Norton Utilities ports that I ported over to the 8-bit Atari. Included are accessories for the Diamond Graphical Operating System.

You can receive the entire set from my auto response e-mail box at:

nntools@cybernetworking.com

This auto response e-mail contains a uuencoded, arc file that is 160k in length.

If you have limited resources you can download NN Tools in three parts (and then combine them before uudecoding) at:

nn1arc@cybernetworking.com
nn2arc@cybernetworking.com
nn3arc@cybernetworking.com

nn1arc and nn2arc are 60k in length, and nn3arc is 45k.

If you want to see what you will be receiving before downloading the entire package, you can receive undel.com (an undelete program that also recovers SpartaDOS directories) at:

undel@cybernetworking.com

Undel is 16k.

Receiving these files thru e-mail is easy. Just send an e-mail to the auto response e-mail addresses listed previously in this post. No need to enter a subject or a command in the body of your e-mail. Just an empty e-mail is all that it takes to receive these programs.

BTW, don't just download the programs. Let me know what you think and or/if you have questions. I can be reached at Nelson@cybernetworking.com.

Enjoy.

Nelson Nieves

4666. SIMPLE CONCEPT FOR EXTRA MONEY

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-16 00:00:00 UTC
From: MR.MORGAN@worldnet.att.net
Message-ID: <32B5658C.6A3@worldnet.att.net>
Source record: 77879

Hello$

Would you like to make thousands of dollars, quickly, legally, with NO CATCH? then keep reading....please take two minutes to read this article - it can change your life, just like it changed mine. It's true! You can make up to or over $50,000 dollars in 4-6 weeks, maybe sooner! I SWEAR I'M NOT LYING TO YOU, AND THIS IS NOT A SCAM! If you're interested in making some big bucks, keep reading; if you're not, I apologize for wasting your time. Here we go.
A little while back, I was browsing through these newsgroups, just like you are now, and came acress an article similar to this that said you could make thousands of dollars in weeks, with only an initial investment of $5! So, I thousght, "Yeah, right, must be a scam", but I was curious, like most of us, so I kept reading.
Anyway, it said that you send $1 to each of the 5 names and addresses stated in the article. You then place your own name and address in the article at the bottom of the list at #5, and post the article in at least 200 newsgroups (there are thousands). No catch, that was it! So after thinking it over, talking to a few people first, I figured what have I got to lose except for 5 stamps and $5, right?
This is from someone who has tryed it and it worked like a charm.
I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought.
But then the money kept comin IN. tripling in size and multiplying by 10 - 20 times the amount that I got the first week! In my first week I made about 20 to 30 dollars. But by the end of the second week, I had made a total of over $1,000!!! In the third week, I had

over $10,000 dollars, and it's still growing! This is my fourth week (Nov 29) and I've made about $42,000 TOTAL, and believe it or not the money is still coming in.... Let me tell you how this works and most importantly, WHY it works.... also, make sure you print a copy of this article NOW, so you get the information from it, and begin making money.

The process is very simple, and it consists of 3 easy steps:

STEP 1: Get 5 sepearte pieces of paper and write the following on each sheet of paper..."PLEASE PUT ME ON YOUR MAILING LIST. YOU ARE NUMBER 4."

Get five $1 bills, and place ONE inside each piece of paper that you have just written on, and fold each piece of paper so the bill will not be seen in the envelope (otherwise, nosey people who like to steal envelopes with money in it will get yours). Put one paper inside the envelope and seal it. Do the same for all 5. You should now have 5 envelopes sealed, EACH having a piece of paper AND the $1 bill inside.

NOTE: Make sure those words that were stated above are written on each piece of paper. What you are doing is creating a service by this. This is PERFECTLY LEGAL. Now, mail the 5 envelopes with the paper and $1 in each to the following 5 addresses:

1. Mark Guerra

3811 Garden Lake Dr.

Kingwood, TX 77339

2.Gillian Taverns

1109 Southwest Parkway #1305

College Station, TX 77840

3. Sarah Simmons

P.O. Box 120

College Station, TX 77841

4. John McRackin

P.O. Box 7548

1350 Greens Pkwy #911

Houston, TX 77067

STEP 2: Now take the #1 name off the list that you see above, move the other 4 names up (5 becoming 4, 4 becomin 3, etc.) and put YOUR NAME as number 5 on the list. You can slightly alter this article if you need to, editing what you need to edit.

STEP 3: Post your amended article (with your name at #5) to at least 200 news groups (there are around 18,000 of them!). All you need is say at least 200. HOW TO DO THIS: If you have Netscape 3.0 do EXACTLY the following:

1)Click on any news group like normal, THEN click on 'TO NEWS", which is on the far left when you're in the newsgroups page. This will bring up a box to type a message in.

2)Leave the newsgroup box as it is, but CHANGE the subject box to something eye-catching, like, 'NEED CASH$$$ READ HERE" or "FAST CASH"!!!

3)Tab once and you should be ready to type or copy and paste the article from a text program. Now, retype (only once) or copy and past (ctrl - c to copy + ctrl-v to paste each time) THIS WHOLE ARTICLE, word for word, except to insert your name at #5, and to remove #1 off the list, plus any other small changes you think you need to make. Keep almost all of it the same.

4)When you're done typing the WHOLE article, click on FILE in THIS BOX, right above send, NOT where it says netscape news on the first box. Click on SAVE AS when you're under FILE. Save your article as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU HAVE SAVED IT. Once saved, move on to number 5 below.

5)If you still have all of your text, send or post to this newsgroup now by simply clicking Send, which is right below FILE, and right above the Cc: button.

6)Here's where you're going to post all 200. OK, click on any news group then click on "TO NEWS', again (in the top left hand corner of your netscape navigator. Leave the newsgroups box alone again, put your eye-catching title in the SUBJECT BOX, hit TAB once you're in the body of the message, and then click on ATTACHMENT, which is below the Subject box. You will get another box to come up. Click on ATTACH FILE, then find YOUR FILE THAT YOU HAVE SAVED; click once on this file, and then click OPEN. Now click on OK. If you did this right, you should see your file name in the attachments box, and it will be shaded green. IF YOU USE I.E. EXPLORER, IT'S JUST AS EASY: Holding down the left mouse button, highlight this article. Then press the "CTRL" key and the "C" key at the same time, to copy this article. Then print this article for your records to have the names of those you will be sending $1 bills to. Next, go to the newsgroups and press "POST AN ARTICLE".
A window will open. Type in your headline in the subject area and then click in the large window below. If you want to edit the article, do so and then highlight and copy it again. Now everytime you post the article in a new newgroup all you have to repeat is "CTRL and "V" and press POST.
7)That's it! Each time you do this, all you have to do is type in a different newsgroup, so that way, it posts to 200 DIFFERENT newsgroups. You see? Now you just have 199 to go! (Don't worry, each one takes about 30 seconds, once you get used to it). REMEMBER, 200 IS THE MINIMUM. The more your post, the more money you will make. AND THAT'S IT!!! You are now in the mail-order business and will start receiving your $1 envelopes from various people all over the world, within days! HINT: THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE. You may want to rent a PO Box eventually, because of all the mail. If you wish to stay anonymous, you can come up with a name, such as "manager" or "investor". Just make sure all the addresses that you have typed in for the 4 people plus yourself are

correct, please. LET ME TELL YOU WHY THIS SYSTEM WORKS! Out of every 200 postings, let's say I ONLY recieve 5 replies, which is actually VERY LOW. So I made $5 dollars with my name at #5. Now, each person who just sent me $1 dollar makes, say 200 postings, now with name at number 4, WHICH IS A TOTAL OF 1000 POSTINGS, not including yours too. 50 people send you $1 dollar now - that's $50 dollars you have made! Next, your new 50 agents each post 200 newsgroups with your name at number 3, or 10,000 POSTINGS (50 X 200 = 10,000). The average returns at $1 dollar each, or $500 dollars. They in turn make 200 postings, which is 5,000 returns at $1 dollar each, which is $5,000 dollars! And finally, 5,000 people make 200 postings with YOUR NAME AT NUMBER 1. YOU NOW GET A RETURN OF $50,000 DOLLARS BEFORE YOUR NAME DROPS OFF THE LIST. AND THAT'S IF EVERYONE ONLY MAKES 200 POSTINGS, AND IF ONLY 5 PEOPLE RESPOND!!! When your name is no longer on the list, you simply take the latest posting that is appearing in the newsgroups, and SEND OUT ANOTHER $5 DOLLARS TO THE NAMES ON THE LIST, PUTTING YOUR NAME AT #5 AGAIN. And start posting again. The thing to remember is, THOUSANDS OF PEOPLE ALL OVER THE WORLD ARE JOINING THE INTERNET AND READING THESE ARTICLES EVERY DAY - just like you are now!!! So can you afford $5 dollars to see if it really works? I think so.. People have said, "What if the plan is played out and no one sends you the money?" So what! What are the chances of that happening when there are TONS OF NEW HONEST USERS AND NEW HONEST PEOPLE whos are joining the internet and newsgroups every day and are willing to give it a try? Estimates are at 20,000 to 50,000 new users every day, with THOUSANDS of those actually joining the internet. Remember, PLAY FAIRLY, AND HONESTLY, and this WILL WORK. I promise you!! You just have to be honest. Make sure you print this article out RIGHT NOW. Also, try to keep a list of everyone that sends you money and

always keep an eye on the newsgroups to make sure everyone is playing fairly. REMEMBER: HONESTY IS THE BEST POLICY! you don't need to cheat the idea to make money. GOOD LUCK TO ALL, PLEASE PLAY FAIRLY, AND YOU WILL REAP THE HUGE REWARDS FROM THIS - TONS OF EXTRA CASH!!! One last note: if you try to decieve people by posting the messages with your name on the list and not sending the money to the people already on the list, you will not get much in return. Someone I talked to knew someone who did that and she only made $150 dollars, and that's after eight weeks! Then she sent the 5 $1 dollar bills, people added her to their lists, and in 4-5 weeks she had over $10,000 dollars!!! THIS IS THE FAIREST AND MOST HONEST WAY I HAVE EVER SEEN TO SHARE THE WEALTH OF THE WORLD WITHOUT COSTING US

4667. Genterm

Newsgroup: comp.sys.atari.8bit

Hey 8-bit Atari Users! Ever wanted a terminal program for the IBM which did ATASCII graphics? Well, Genterm does! And, very well. Send Email to Division Software at d.soft@freenent.hamilton.on.ca

Do not REPLY to this message, as this has nothing to do with my Users Group.

PRESS RELEASE

Genterm is a high quality MS-Dos based PC terminal program. The main benefit of Genterm is its quick execution. Even an orginal IBM PC can operate a 14.4 modem WITHOUT losing characters! Not a stripped down terminal, Genterm is a FULL FEATURED terminal with context sensitive help, pull down menus and a variety of protocols and translations including ATASCII (with VGA monitors). Genterm operates with CGA, EGA, VGA, SVGA and TTL monitors. Quite simply, if your PC can run DOS, you can run Genterm! Other features of Genterm include Wave and Speaker alarms, BIG FONT support

```
#####  ##  ##  #######  ##  ##  ##

```

Like this....

Create Ads quickly and easily featuring various BIG FONTS and graphics.

Genterm's ATASCII support is EASY to use. Yes, there may have been some
PC terminal programs which emulated ATASCII in the past, but none as well
as Genterm. A verbal agreement with Fine Tooned Engineering will allow
internal LMODEM upload and download protocols to be included in a future
release of Genterm (If FTe ever resurfaces). Five years in development,
Genterm has gone through extensive improvements and testing. No Atari
8-bit owner should be without a copy of Genterm for their IBM PC or Clone.

Allthough they are pretty old, I think Ballsong and Ballsong 2,
put out by the Atari Research Lab, were pretty amazing for their time.

Yes, OSS did have C65, but it was eventually released to PD as CC65.
There are also ACE C and CC8, but they compile as pseudo-code (sort of
like Atari's tokenized Basic), requiring a runtime file but still pretty
fast. CC65 compiles to 6502 machine code, as does Action!, but for speed,
Action! is the runaway champ (no pun intended).

BobTerm is about as close to plug-and-play as you are going to get. The latest version I know of is 1.22. But there is the issue of how your modem is connected to your Atari. Are you using a direct-connect (1030, XM301, or SX212 modems) or an RS232 interface (850, P:R:Connection, etc.)? If you are using the 850 or PRC, you can let Bobterm boot the handler from the interface, but you will have to preload the handler for the direct-connect modems. Fortunately, all the handlers you need are included in Bobterm, as is some pretty good documentation.

Hope this helps.....

If memory serves, SX-Express was virtually 850 Express with the addition of an SX212 handler. You can use the original 850 Express if you can find a file called SXHANDLR.COM. This loads a handler specifically designed for direct-connect, Hayes-compatible modems, like the SX212. Another handler is RVERTER.COM, which comes with Bobterm, a program I prefer over Express. (Don't ask me how, but I accidentally formatted a disk with Express!)

What was the big deal with Ballsong? I don't get it. A ball bouncing back and
forth with meaningless music playing. Am I missing something here?

I liked the CES Demos(power without the price knock-off of the Amiga ball
and the robot/spaceship ones)

randy

Seems like there's alot of communication regarding buying and selling of old 8-bits around here. I just wanted to share a little experience of mine the other day. I walked into the Value Village down the street from my house and they had 2 Ataris. One 800, a little smudged, priced at $10.00 and a 130XE in mint condition for $7.99. I suppose they thought the 800 was bigger and therefore better. I guess I was a little greedy so I bought both. Both systems work perfectly and now the 800 looks mint too with the help of a little 409. Anyhow, just a word of reminder for those seeking these classic systems to not neglect the thrift shops.

Another thing, does anyone have a user's manual for the MAC/65 (Macro Assembler). I have used AA/E before but this package is in another league. I tried writing an Email to FTe, the company that released this disk version, but so far no response. If anyone knows of any docs sitting around on the 'net I would be very appreciative.

Dan Vernon

> basically the same thing only for the SX-212?

Get BobTerm... it is like Express but better. SX-Express is the same thing as the last version of 850Express (for the Atari 850 R: device) but with an autoloading R: handler for the SX modem included. BobTerm comes with many handlers (including one for the SX modem).

The manual for SX Express is a simple manual... it does not cover all the features of the programme. If you get SX Express, also download 850Express just so you can print out a more complete manual.

If you get the SX Express disk, it has what is supposed to be an extra, external, R: handler for the SX modem which one is supposed to use for writing one own's programmes using the modem. It does not work and is junk. Apparently, during the development process, the programme was uploaded to the production department for inclusion on the disk. However, it was uploaded as ASCII (all the non-ascii codes are trashed... not the best way to transfer a binary file!). Apparently no one ever tried out a production disk to see if the programme would load/run. Heck of a statement about Atari quality, isn't it (do not know how to treat binaries, nor check the production copies). When I had written them about the problem, of course, I never got a response.

So... don't get SX Express for the included R: handler. Instead get BobTerm which includes an R: handler. BobTerm is like, but better, than Express. SX Express works (but not the extra programme included) fine, but you should also get 850Express, because the printed manual for SX Express is not complete.

As you can guess, I don't recommend it.

Yeah, the OS has been changed, and the use of PIA is sligtly altered, as
well, to control the extra select line required for Missile Command. Ever
notice on an 800xl that the keyboard test includes the four missing function
keys? They're gone on the XEGS.

SX express is probably at Umich, but I'd go for BobTerm, which to my mind is the best all-inclusive term setup for the 8-bit. Though, to be fair, FlickerTerm is the Best VT100 I've seen, on PC or 8-bit. And Larry Black's Atar-Z-Modem is invaluable as well.

Actually, I think he is referring to Strange Odyssey, where you begin in a spacecraft and must wear a space suit, recover some treasures and eventually fix your own spacecraft (if memory serves me correctly). It was a lot of fun, not too hard, some of the puzzles were actually solvable, I first played the text version as a kid about ten years ago.

It was Adventure #6 of the original 12, and from what I gather, also #6 of the SAGAs.

Anyone know where these are, or if you've played them, what did you think?

Falcon

4682. important--you must read this!

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-16 00:00:00 UTC
From: InfiNet
Message-ID: <594bpi$j80@oolong.memphis.edu>
Source record: 77895

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more. That's ... because it WORKS! So I thought, all those new users might make it work. And I decided to try it out, a few months ago.
Besides, whats $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted.
Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few
hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had recieved nearly $47,000.00. It came
from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he
made $53,664 in the same amount of time. Dan Shepstone says it was only
$17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests
in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate piecesof paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST."
(In this way, you're not just sending a dollar to someone; you're paying
for a legitimate service.) Fold a $1 bill, money order, or bank note

inside each paper, and mail them by standard U. S. Mail to the
following five
addresses:

1- Natalie Jansen
Lancveldlaan 18
5671 CN Nuenen
Holland

2- Victor Chen
2021 Hearst Ave
Berkeley, CA. 94709

3- Steve Boltinghouse
1009 Bird St.
Hannibal, MO 63401

4- Sean T. Stevenson
14933 Blackwood Lane
White Rock, BC
CANADA
V4B 2A8

5- B. Bradley
284 Deloach
Memphis, TN 38111
USA

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to
keep an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass

it along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY !!!!!!!!!!

4683. The Goonies, Bounty Bob and Best RPG

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-16 00:00:00 UTC
From: "W. David Falcon, Jr." <wfalcon@uofrlaw.urich.edu>
Message-ID: <32B596B2.6C8D@uofrlaw.urich.edu>
Source record: 77896

Questions for the Atari community:

1) Does anyone have a cartridge version of Bounty Bob? I haven't been able to find one anywhere. If you have one, and you're interested in selling, please mail me with price.

2) The Goonies: what is this game all about? What am I supposed to do?

3) I'm interested in finding out what everyone thinks is the best Role Playing Game ever made for the Atari 8 bit. I've played the Ultima series and I'm wondering if that's as good as it gets.

Falcon

: I have a couple of text files kicking around here on the ASM/ED cart
: that were written by Mat*Rat himself. They summarize the commands, etc.
: for those who bought the cart from ATV & others without docs. Very little
: info on programming, but more on operation of the cart than I've seen almost
: anywhere else. I believe they are the text of a couple of articles for Analog.
: However, way at the top it says, "Released" and a date, so I assume Matt
: put them into the public domain.

I would like them!

: I would be happy to email the files if someone wants them. Genie won't
: let me attach files to Internet mail, so I would simply email the straight
: text.

Since they're text,how else would you mail them.

If you're going to just ASCII upload them,you should still UU-encode them
to preserve the formatting since some editors will word-wrap and corupt it.
Even if the editor doesn't,still UU-encode them since I (and 20,000 more
on the Freenet) have no way to directly download our mail.So if there's a
character that's even a little bit non-standard,it gets turned in to a
under-line.

You should only use UU-encode since that's the only encoding method that I
know of on the Atari.No base64 MIME stuff.

4689. Best Assembler?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-16 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <594a21$qf5@freenet-news.carleton.ca>
Source record: 77902

Whats the best assembler for the Atari 8 bit? I would
like to get something that uses makes good use
of macros, string (or at least macros to print/get strings),
etc.

Should I learn Action? I know 6502 pretty much forwards
and backwards since I coded my 6502 sim package, but Action
may offer lots of higher level goodies?

I've never used Action, so im a bit confused by all the
talk about it. There is a cartridge and a disk version? There
is a version that requires a runtime and one that does not?

I would like to be able to create fast standalone executables that
do not require a runtime program.

Where can I buy the items you reccomend? I would like to get a
whole development setup going, so I can work on some of the
ideas I have without lots of false starts on compilers I
will hate/are too weak, etc

Steve

(perhaps we should write an FAQ just for programming?)

: should I post it? My dad wouldn't mind; he considers the Atari a dead
: platform.

Well,what did it do?
Did it play a song,or ask you for notes?
Yes,post it.I don't know if you'll have to UU-encode it.
(I once got a BASIC LIST file off of umich,but I had to re-connect all the
long lines that got split by line wrap)

: "There are no significant bugs in our released software that
any : significant number of users want fixed." -- Bill Gates

(#@$#@ PICO corupted yet another message)
You know I remember reading in "un-authorized Windows" that the reason
that USER.EXE for Windows 95 (i.e."Windows 4") is so similar to the one in
Windows 3.1 is because they were trying to maintain all the bugs so that
software would all work.Since they had no way of remembering what all the
bugs were,they had to make a almost-perfect copy rather than just a
USER.EXE with all the same commands/function calls.

: >
: > I'm really impressed. How long did this take you to figure out?

: I'd be curious to see your original message. I've done some careful
: examination of the output of the actual Atari and have created tables
: which are the original bit patterns. I have tables for both the 4-bit
: and 5-bit polys; I choose not to create tables for the 9-bit and
: 17-bit as they would have 511 and 131071 entries respectively!

: I'd be curious to see your full algorithm and the results it produces.

: Regards,

: Ron Fries
: rfries@tcmail.frco.com

: P.S. I assume you need the polys for generating sound. I've already
: created a set of routines which will do that based on my tables.
: Let me know if you're interested. And be sure to reply to my
: e-mail address. Again, our news server isn't very reliable.

The poly-counters are used to induce "distortion" in to a sound channel.
If a programme is producing simple (pure) tones,then it's not using polys.
Games that make sound effects like explosions ARE using polys.

Sort of. Shortly after signing a distrobution deal with WalMart to
sell Jaguars, Atari was bought by JTS. JTS is letting the rest of the
Jaguar inventory rot away. The only thing left of Atari is Atari
Games, which, by the way, is doing quite well. Wayne Gretzky Hockey 3d
(or something like that) for the Arcades and N64 is drawing alot of
attention.

: >The P:R:C doesn't go at 19200 with BobTerm.It probably doesn't go that
: >fast at all!

: > The Doctor
: ---------------(some stuff removed above)--------------

: I missed a couple of things. You don't set the null modem to
: originate/answer, you set the comm programs. One has to be the calling
: party and one has to be the host/answering party. If poth are set to
: answer (ATA) you get no communication.

You're still not making sense.If you're null-modeming then no one is the
"calling party" since there's no modem nor phone involved!

: You're right about the PRC not doing 19200. I got so use to using
: my MI/O at 19200, I simply forgot. The PRC can do up to 9600, but you
: need a patch to the R: handler to get that fast. I forget, but I think
: the PRC abd 850 max, normally ar 2400 or 4800bps. I'll locate the patch
: and e-mail it to anyone that needs it.I'll also post it to the Umich
: archive.

I don't know about the 850,but the P:R:C can go at 9600.
Perhaps 19200 could be done with ANTIC de-activated.
Since the P:R:C handler has to create the baud rate,interupts by ANTIC
would disrupt it in the middle of a byte.
(disk drive,printer and et cetera baud rates are done by the hardware(POKEY))

cathryn@junglevision.junglevision.com says...

I'm looking for some Atari 8-bit demos for testing. I'm interested
in amazing Atari graphics and sound trickery.

1. What is the best Demo out there? (Or the top 5 or so)

2. Where can I get them?
>
>Reply either in the newsgroup. Or email to cathrynm@aol.com
>
>
>>Allthough they are pretty old, I think Ballsong and Ballsong 2,
put out by the Atari Research Lab, were pretty amazing for their time.

What was the big deal with Ballsong? I don't get it. A ball bouncing back and
forth with meaningless music playing. Am I missing something here?

I liked the CES Demos(power without the price knock-off of the Amiga ball
and the robot/spaceship ones)

randy

try programming something like it, 3'd scaling. shadowing,
music, allways similar,but never repeating, each music track, having a
gravitational 3d pull on the ball. in a relatively tiny amount of code.
pretty slick i think. and even 2 variations.

My brothers and I really liked this game, so much that after we
finished it we had to go rent the Goonies!! Anyway, you have to use
your two people on each screen together to solve the puzzle for each
screen. Its been 7-8 years since I did this, so I do not remember each
one. Watching the movie does help though. You can control both
characters with one joystick, switching between them, or (better) get a
friend to control one while you control the other, a lot easier.

I don't have the complete text of the MAC/65 manual in file format, but I did create some thorough reference sheets when I was doing lots of Atari Assembly programming. I'd be happy to send them to you. Just give me an Email address.

They are currently in TextPro format, but can easily be stripped down to raw text if necessary. I've got them sitting right here on my PC.

4703. Re: Assembler question

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-17 00:00:00 UTC
From: robert erickson <dperw@mail.utexas.edu>
Message-ID: <32B643AA.374A@mail.utexas.edu>
Source record: 77819

anybody have the documentation for mac/65?

yogi has mac/65 in atr format.

thanks,

robert

4704. Re: Atari 130 XE sound

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-17 00:00:00 UTC
From: "Kyle R. Hofmann" <rhofmann@crl.com>
Message-ID: <594se6$gbi@nexp.crl.com>
Source record: 77820

In article <594f1e$c5j@login.freenet.columbus.oh.us>, Daniel Klugh wrote:
: Kyle R. Hofmann (rhofmann@crl.com) wrote:
: : My dad once wrote a program (Music16) that let you use four channel
: : 16-bit sound on the 8 bits. It worked on our 800 and later on our
: : 800xl. I don't know how it worked (I was in elementary school at the
: : time) but I think we still have the source somewhere. If I can find it,
: : should I post it? My dad wouldn't mind; he considers the Atari a dead
: : platform.

: Well,what did it do?
: Did it play a song,or ask you for notes?
: Yes,post it.I don't know if you'll have to UU-encode it.
: (I once got a BASIC LIST file off of umich,but I had to re-connect all the
: long lines that got split by line wrap)

Darn it, my memory tricked me. I dug up the documentation, and it only supports two voices. It does support most musical notations, i.e., you can do tremolos, triplets, repeats, D.S. al Coda, different tempos, volumes, attack, decay, etc. It was a set of macros for MAC 65 that did stuff in the VBI. I do remember that it sounded beautiful. I had it playing Telemann's Duet in G Major for flute and violin constantly. :) Anyway, now that I've figured out that it wasn't any sort of black magic, but just a (major) convienience, I'm not willing to type it in anymore. I at least attempt to have a life. :) Most of the time. :)

"There are no significant bugs in our released software that any significant number of users want fixed." -- Bill Gates

4705. The BEST 8-bit Demo?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-17 00:00:00 UTC
From: UASZ40A@prodigy.com
Message-ID: <595144$h8e@usenetp1.news.prodigy.com>
Source record: 77821

The music of the Ballsongs was what made the demo great. The programmer (Crockford?) was showing how little memory was needed to create a number of interesting musical passages mixed with randomness. The ball is just an interesting afterthought for the fun of it. I liked his maze with the medieval music too.
There's a demo called Swing from Europe I like. I think it was designed for PAL systems, but still looks great on NTSC.
- bostone

4706. Re: SIMPLE CONCEPT FOR EXTRA MONEY

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-17 00:00:00 UTC
From: lenspencer@aol.com
Message-ID: <19961217044200.XAA28758@ladder01.news.aol.com>
Source record: 77822

Sorry, but this is just another one of those chain-letter/pyramid scams,
and despite all your claims of legality throughout the message, it is
ILLEGAL.

4707. Atari 8-Bit Computers: Vendors and Developers

URL:http://www.lib.ox.ac.uk/internet/news/faq/archive/atari-8-bit.vendev.html

Usenet newsgroups where this list is automatically posted bimonthly:
URL:news:comp.sys.atari.8bit URL:news:comp.answers URL:news:news.answers

You can also send for this list by mail.
URL:mailto:mail-server@rtfm.mit.edu message says:
send usenet/news.answers/atari-8-bit/vendev
quit

Finally, you can always ask me for a copy at URL:mailto:mcurrent@carleton.edu

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
```

developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices.

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the PD by the copyright owner. If there is no copyright notice, software must be considered Freeware rather than in the Public Domain.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics magazine, published by Jim Hood and Bob Woolley
- The Atari 8-Bit Omnibus, published by David A. Paterson

"Hi!" to Marek Tomczyk, who has supplied SO much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

-
-2) The Goonies: what is this game all about? What am I supposed to
do?
-
You have to avoid the criminals and save both kids (move to entrances,
etc. I think on the first level you need to touch the fireplace, opens
the exit, move both kids out the exit)

-3) I'm interested in finding out what everyone thinks is the best
Role
-Playing Game ever made for the Atari 8 bit. I've played the Ultima
-series and I'm wondering if that's as good as it gets.
-
I think ultima III is the best, but I'm sure I'll be outvoted by the
alternate reality group.

I believe the point he is trying to get across is that the Carrier
Detect line should be wired up, since some programs require it to
'answer' and talk. (i.e. they refuse if no carrier detect).

> I don't know about the 850,but the P:R:C can go at 9600.

There are some revisions of the PRC that support 19200, some only
allow 9600. The handler of the 850 interface allows you to SET 19200
baud, but it fakes it and does it buisness at 9600 anyway.

> Perhaps 19200 could be done with ANTIC de-activated.

Why? The SIO bus can easily sustain transfer speeds in excess of 56000 baud.

The only speed restriction is due to poorly written handlers. I commonly
use APE's R: handler to talk at 56k BPS via the SIO port to
my PC modem.

You might improve the performance of a poor hander by turning off ANTIC
but the best solution is to just write a better, faster handler.

Hello Sam,

My suggestion is not along the lines your looking for and may not Help.
But I hooked a Sound amplifier to my 800xl RCA Audio Jack on my Monitor
Port. Sounded really good on speakers as I played Star Raiders. My parents
would awake thinking I was in the Middle of a War. Also, you should see
Star Raiders on a 27 inch TV acting like a Composite Monitor.

Actually, I think the WICO Command Control JoySticks were best. The have a
Bat Handle with a Steel shaft underneath. And you can unscrew the Bat
Handle from the Base and replace it with a Grip handle. In either handle,
you still have fire button at the top of the Handle and also in the base.
And it's not likely kids will wear it out. Unless their on Steiroids.

Hello Robert, this is how I transfer files between my 800xl using an 850 Interface and my Atari ST. It should work for you. I don't have a Null Modem Cable or an SIO2PC. Bob Puff of CSS told me that neither the P:R: Connection nor the 850 Interface can reliably do over 2400 Baud. I have a Modem hooked up to my ST and a 2400 Baud hooked up to my 800xl using an 850 and BobTerm. To hook the 2 Computers together, I string a long Phone Cable between the two Modems and plug them into the RJ-11 Jack (RJ-11?) that usually plugs directly from the wall jack. Set both Modems at matching speeds. No higher than 2400 Baud or the 850 (According to Bob Puff) will drop Characters. Have the 8 Bit to send the Originate Signal with BobTerm and Answer on your PC. If necessary, reverse which Answers & Originates. Once you've Connected with BobTerm you can transfer with Y-Modem Batch or even F-Modem Batch (If PCs Support F-Modem).

I remember buying AR: Teh City when it first came out, for like $55. What
really sold me was the graphics, very impressive, but I stopped playing
after about a week or two because I found the game impossibly hard. I
could barely even survive the first night, much less advance my character.
It didn't do my self esteem much good to get my arse kicked by little
homeless children, I can say that much......
How did everybody else manage?

Macs are NOT just "school" computers. They are probably better
designed and definitely work better than mos Intel based PCs. Microsoft
whishes they had an OS that worked as well. I'm not a Mac user, but at
least I know what a Mac is and what it can do. Please get your info
straight before you post comments like this. Thanx.

I guess it could be the rs232 interface hardware and the r:
handlers that are at fault. I'm sure there are lots of users that would
love to use their 850 or PRC with the 28.8 or new 56kbps modems.
Hmmm... Can Bobterm support these rates. It seems to do well on my
14.4kbps modem and 19200 null modem via my MI/O, but 56Kbps via the
MI/O and null modem would sure help me with x-fers. Who has aan R:
handler/ comm program that will work for the MI/O? I want one.

Too slow. I'm currently x-ferring at 19200bps. 2400 is painfully slow. I'd like to find a way to x-fer at 56K or faster via null modem cable and my MI/O. I gave up on the PRC and 850 when I got my MI/O. May some year I'll buy a Black Box.
before I got the MI/O I use to x-fer files that way. It worked, but not well. Too messy.

Heh, I still have a running character. level 12, over 72 strength and
the rest well over 30. Yes it was a VERY hard game to actually build a
character up. I cheated a little by saving the game every time I
gained something (anything at all, from a gem to a potion). It was
very time consuming. Starting the game, loading the character, playing
until I found something, saving the game, making a backup character
disk, re-loading the game and playing until I found something again,
copying the wrong side of the character disk (arghhhh).
Anyway, I had a great time exploring the CITY. I spent somewhere
between 2-3 years trying to make a map of the city. I actually still
have my map somewhere's about too.

In reference to the GOONIES, here is a little poem that I got with the
game:

The Goonies- some hints and tips.

level 1:- Mama Fratelli is greedy and mean, money will get her off the
scene.
Quench the embers, run, run, run, and you will find your task
is done.

level 2:- Rocks that crush, pots that pour, bats that fly, you can't
ignore.

level 3:- Duck the bullets, dodge the steam, burst the pipe, and leave
the scene.

level 4:- Back and forth the Goonies race, a cannonball will set the
pace, clear the tunnel, knock out slats, get out quickly, watch for
bats.

level 5:- Build a ladder, build it high, before the rungs turn red and fly.

level 6:- Deadly slime plays music sweet, floors appear beneath your feet.

level 7:- Eight arms guard the pathway out, flush him down the waterspout.

level 8:- Pirates treasure, jewels and gold, Mama wants all she can hold, Sloth can make her leave her post, offer her what she wants most.

GOOD LUCK!!!

I don't know about Netscape Gold 3.0, but Netscape 3.0 takes about 2
minutes to send messages; especially quoted ones. I would typically
think the server is slow, but why does Eudora consistantly
recieve/send mail faster then Netscape?

I really don't care. I use my three favorite internet programs almost
exclusively. They are:

-Internet Explorer 3.0b(at the moment)
-Eudora
-Forte FreeAgent

I'd recommend you delete Netscape completly and install all these
programs instead.

It was the power supply. Thanks for the suggestions, I dug up my 800's
ps and it worked. Now I'm short one power supply, but then again, I can't use my
800 until I replace the SIO port anyway (a few pins were bent out).

Yes, Bobterm does transfers well at 56kbs with no loss. Bobterm itself
it not responsible for buffering and queueing of data, the
handler is. All Bobterm does is call the 'get one byte' portion
of the R: handler.

The R: Handler itself handles the baud rate and data exchange. So
no matter what the R: hander tells bobterm, it can work the
pokey as fast as it likes.

The 850/PR connection both work perfectly at upto 9600 baud. I think
he meant that using a null modem connection at over 2400 could
cause you to lose characters if the PC side were to pause for a long time
(since there is no hardware flow control in these interfaces).

The trick was to start a character with really good stats, and try to
find the fabled Sword-Of-I-Win. I think it was a flamesword or something
like that.

Oh, and don't pick on knights and stuff. :)

Most entertaining and long term playability its Alternate Reality. As
for RPG I think it has to be Ultima IV. Ultima III was too small/short.

I picked up an old Atari 800 (w. 48k RAM) and accompanying odds & ends (410 tape, basic cart, etc) as a Christmas present for my 12-yr old cousin. I'm hoping to get him to start playing around with it, programming-wise, just to get those gears in his head turning...

So, would anybody have the *SOURCE CODE* to an/any old Atari Basic game that'll work on the 800? Not a disk image, but source I can print out (from unix, windows, or mac) for him to type in?

(yeah, ideally I'd find some old book on programming these things, but I just haven't run across one yet)

btw, I have found the Atari Basic reference at http://student.uci.agh.edu.pl/~tatar/Atari. If the author is reading this... thanks. :)

4741. Demo help: music?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-17 00:00:00 UTC
From: nickb@primenet.com
Message-ID: <597p6b$36b@nnrp1.news.primenet.com>
Source record: 77857

I'm trying to code a demo, and it would help if someone could do the music for me since I'm having a hard enough time doing all the graphics.

I'd like it to reside above $8000, preferably under the OS or something.

The demo will have a new kind of color scroller and some Moviemaker-ish animation in it.

That was unnecessary. The Atari remains an excellent sequencing platform, especially for those on a budget. And while the price is more that I would pay, I know that in the not-to-distant future I'll replace my crash-prone ST so that I can deal with the many songs that I wrote with it without have crashes all of the time. I have moved on to a Mac, but there are some things in my Atari sequencing program (DR T's Omega II) that I like more than Cubase, which is what I use now.

Jay Miner did a lot more than that.

Atari 2600 chip-set.
Several patents for the Amiga system architecture.
A couple pacemaker chips.
Prototype clock chip for the Apple Macintosh.
Help found Synertek, Zymos, etc.

i too would like the documentation for MAC/65.

not to beat a dead horse, but i've seen the discussion on assemblers lately.

seems there is a consensus that atari assembler/editor is marginal. mac/65 appears the way to go, and it is available as an .atr on yogi's site.

i noticed that there is a new site that is beginning to receive txt uploads of manuals:

http://www.best.com/~morbid/manuals/manindex.html

it would be very helpful if someone could upload the manuals to this, or any other site.

cheers

Thanks. I had thought about that right after I sent that message. It's
been a while since I've done it that way. I have also been using
FlickerTerm 80, and with the high-speed handler I wrote for the MIO, I
have always preloaded it to save the hassles.

Get a pair of Sega Genesis (or compatible) controllers and rewire them
for the 7800. There are instructions for doing this somewhere on the web.

I also have a bunch of these (ASCIIPad controllers) for my Atri 2600 and
my 800 - and no conversion is necessary. They're much better than the Atari
sticks!

I also have one to sell:

Atari 1040 ST
SM 124 High Resolution (Monochrome) Monitor

Software (including licences), includes

Steinberg Pro 24 III
Lattice C
First Word (MetaComCo)
Misc Atari software bundled with 1040 ST
and some games. Pretty outdated nowadays, I'm afraid.

Also lots of source code, public domain software.

Of course, all works fine. I used it to produce software
(we wrote a clone of GEM for the PC DOS, OS/2 and
Unix environment, and music (Pro 24 III was THE studio
recording solution of the 80s).

Asking price: make your price.

I would say the Atari Macro Assembler, if it were not a bit buggy or
just on disk only for working under DOS 2.5 (or DOS 2.0?) (now if
it were fixed and on cartridge with TextPro on the cartridge for an
editor, it would, in my opinion, blow MAC65 away).

But... it is not... so... MAC65 is the one to use.

Or use a cross assembler running on a PC and convert the binary files to
the format used by the Atari system (starting addresses/blocks/etc.).

Mac65 is great, but John Harris' MAE is pretty neat too, esp for upgraded xl/xe models. Even supports the 65816 opcodes, for the few of us that have 'em.

>Should I learn Action? I know 6502 pretty much forwards
> and backwards since I coded my 6502 sim package, but Action
> may offer lots of higher level goodies?

I'm in the midst of learning Action, and I gotta say, Atari should have licensed it and dumped BASIC. Modular programming, not too hard to use, and FAST!

>I've never used Action, so im a bit confused by all the
> talk about it. There is a cartridge and a disk version? There
> is a version that requires a runtime and one that does not?

All Action programs require the cart UNLESS you compile with the runtime package. Once compiled with the runtime, they do just fine on any machine. Russ Wetmore wrote HomePak in Action!; he wrote a series in ANALOG about Action programming. There's also a tutorial series available from Umich.

>I would like to be able to create fast standalone executables that
> do not require a runtime program.
>
>Where can I buy the items you reccomend? I would like to get a

> will hate/are too weak, etc

Watch the for sale/auction posts; Action pops up periodically. I got mine (with toolkit and runtime) for about $20. Added bonus: you can intergrate assembly into Action without too much misery.

Action only supports BYTE, INT and CARDs, though - floating point requires the toolkit and isn't quite as elegant or easy.

(Man wants M65 documentation.)
You can wait for somebody to upload documentation.
Or, if you're in a hurry, and want a super cart m65 and want
to be sure it is a good m65, not corrupted or messed up,
Mike Hohman, who we haven't seen lately owns the rights
to OSS, M65 is still a viable product, and B&C may have
some ACTION! or M65, with super cart, the actual docs
that come from OSS/FTe, probably for around $50 + ship.
B&C-408-986-9960 closed sun-mon. California
Also, CSS was handling the OSS carts
(Bob Puff hisdamself) 716-429-5639
or see vendor list just posted

4764. How do I run games in the xf25 emulator?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-18 00:00:00 UTC
From: Peter Hinz <peter@vis.co.za>
Message-ID: <32B845C8.41C6@vis.co.za>
Source record: 77783

I've downloaded the xf25 emulator and some collection of old classics (the file is it .atr format). Now the big question is, how do I run the programs inside?

Any help would be appreciated.
peter@vis.co.za

Thanks
Peter

: > want (those sounds i ear in games)
: > big thanks in advance

Well the sound statement works like this.
SOUND a,b,c,d

Where a=which voice you want to use(0 to 3).
b=pitch(0 to 255).
c=distortion.USe even numbers 0 to 14.Odd numbers activate digitized sound
mode.Use 10 for a pure tone(no distortion).12 gives you a buzzer.
You can get a engine type buzz but using two sound statements and
alternating c between 0 and 1.
d=volume(1 to 15).

I hope that helps.argument c is where it's at.Try multiple voices at the
same time.

If you thought you had problems with NetScape, you'll have WORSE luck with I.Explorer. Not only is it bug laden, but since most pages (70%) are formatted to look their best with NetScape, most things look like crap with I.E. (I know .. my own homepage looks like crap with I.E.).

Hey, 70-75% of people use NetScape ... I.E. needs to work out some of its problems.

BTW, been on the Internet (WWW) since its inception, and have used just about every browser ... even remember pre-NetScape days on Mosaic with a MAC ... that was SOME time ago!

As for Mail Clients, both Pegasus and E-Mail Connection blow Eudora away.
Check out Stroud's Internet Apps page for ratings.

As always, there is always room for personal preference in everything. Your mileage might vary ....

I had 2 friends who were Ultima freaks as well. It came out on the
Apple II first (argh) so I was camped out at his house for a week.
Thats all it took. The puzzles seemed too easy to figure out and
complete.

Ultima IV took alot longer. Completing all the quests and getting the
whole party together took awhile. Then getting enough stuf to survive
the final dungeon took forever (waiting until midnight for mandrake
root, or was it night silk?)

And since you couldnt save in the dungeons on the Atari 8bit version, I
spent a whole night getting to the bottom!

Later,
Steve

: Macs are NOT just "school" computers. They are probably better
: designed and definitely work better than mos Intel based PCs. Microsoft
: whishes they had an OS that worked as well. I'm not a Mac user, but at
: least I know what a Mac is and what it can do. Please get your info
: straight before you post comments like this. Thanx.

IT doesn't matter how well it's designed.It may have resources and
re-locatable memory blocks,but it's still aimed towards people
who can't seem to understand anything about computers.
And what's that I read in my Mac bible about how sometimes you have to
re-boot because even after quiting all programmes because you still don't
have all memory freed up?
Sounds like a memory leak.

I can't count the number of times I've had to explain MyDOS's DUP to people.
(type R2<ret> to switch to the games drive,"*" to do a directory,and
"L<filename><ret>" to load the game)
They simply can't remember!!!Arghh!
I ended up with a BERT directory because someone had typed "QBERT"!

I only know about the PC's proper OS,MS-DOS.From what I've seen of
Windows 3.1,it sounds like crap.Memory leaks and all.Oh,and how if you
switch to over 256 colours/lums that some icons will just be black shadows
and if you try to run them,they get deleted for ever.I don't know how much
it's the Windows' OS's fault,but it seems horribly designed.
I can't believe that people left MS-DOS for THAT!
From the beginning Microsoft has ruined MS-DOS.ANSI.SYS doesn't suport
graphics.(at least it could changes graphics mode and return a memory
address of the frame buffer)
And EMS,what a joke that was.Memory leaks and totaly bypassing the OS.How
about a RAMdisk type device.Something like UNIX's mmap() could be used to
map in pages of memory.You could open a file without a filename,these
files would be deleted upon closing them(which MS-DOS does automaticly if

the programme is terminated by a interupt).
(much like how UNIX files that are deleted don't actually get deleted
until they are no longer in use by a process)
And they could be opened with a filename for the purposes of shared memory.
(in which case they wouldn't get deleted.Perhaps they could be re-named
back in to oblivion once the partner programme opened it and the creator
programme died)

Sheesh,I think about MS-DOS too much.I just hate seeing it being ruined
like this.I'm so used to Atari and UNIX type systems.
(i.e.efecient systems)

(god I wish I had a spelling checker!)

geez... sounds like you're in a time warp to the past or something... complaining about windows 3.1, like that's current, not even mentioning windows nt 4.0.... and then saying that you saw a mac once, that had a b/w screen and funny pictures.... well, at the time the mac only had a b/w screen, pc users had the joy of Hercules green monochrome (4 shades of puke if you upgraded to a color card, 4 ugly cga colors if you splurged on a cga monitor)... so what exactly do you USE computers for, anyways? The reason GUI's were invented were to abstract data to a degree where the user is in touch, but is able to sort through more information faster than text-based systems.

look at your calendar...it's not 1986....

: have to go back to Eudora for a while and compare??

I dunno,it's all greek to me.I use tin to post.I am also forced to use
PICO<sneer> which tends to corupt the formatting of my messages.
(You don't see this much because I try to always repair the damage)
But tin notices when the headers become corupted (from word wrapping) and
tells me to re-edit line #n.
I had the same problem with nn and some unknown editor that was even
simpler than PICO(could you believe it).But nn wouldn't warn me that the
header (usually the newsgroups one) was invalid so I'd finish posting for
the day to find messages bounced back to my mailbox.

So,to help you out,what editor does NetScape invoke to edit messages?
Do you have a choice?
I used vi when I used to connect to the internet with my Linux system.
(with trn as the newsreader)
Actually,it was a vi clone,elvis.

4778. my 810 drive doessn't work!

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-18 00:00:00 UTC
From: Omar Pualuan <opualuan@oboe.calpoly.edu>
Message-ID: <32B860CC.1A95@oboe.calpoly.edu>
Source record: 77797
Cross-posted to: comp.sys.atari.8bit,alt.comp.hardware.homebuilt

Hello... I recently bought an atari 800 with an 810 disk drive... the 800 works perfectly, but the 810 disk drive does not appear to work (I knew the 810 didn't work when I bought it, in hopes that I could fix it). The 810's power and busy lights come on, it does that whirring startup thing, then the power light stays on, and the busy light goes off. I put in the master disk II to load dos, and typed DOS at the basic prompt. Instead, I got to memopad. I tried booting with no cartridges, and it booted to memopad. there doesn't seem to be any kind of interaction between the atari 800 and the 810 disk drive; there are no boot errors or anything.

I have two cables that I tried, so I don't think that's the problem... is there anyway to test what's wrong??? could it be a bad cable, bad disk, bad peripheral port in the 800, or is something with the 800 itself?

Is it worth it trying to fix this, or does anyone have a *working* disk drive to sell me???

Thanks in advance for your help.... please EMAIL replies to opualuan@oboe.calpoly.edu, as my news server sometimes skips over messages...

While you may not agree with Bob's opinions, they are usually firmly based in fact. Take some time and use your Internet access to find out about the proposed laws on Capital Hill. There are many (mostly lawyers) who would profit greatly from these proposed and re-written copyright laws.

If you enjoy your present freedom of access to Atari material on the internet, perhaps you should tell your Congressman and Senators what to do with these new proposed laws before it is too late.

The best assembler I know of offhand is MAC/65, especially the cartridge version. There are some excellent European disk-based assemblers out there, but I will reserve my comments on them until I see some documentation in English. I just found a new Polish assembler that is said will produce the SpartaDOS X relocatable commands, but again, no English docs.

Action! is by far THE best high-level language ever developed for the Atari 8-bits. Compiles to fairly compact machine code, and there are lots of routines floating around to take full advantage of the Action!/Atari combination. There are at least two runtime packages available, one is PD, the other commercially available. When INCLUDEd into your source code, the runtime file is compiled in, and becomes part of the resulting object code, and so doesn't need to be loaded separately.
>
>I would like to be able to create fast standalone executables that
> do not require a runtime program.
Fast?? How's this? I have the source to the Seive of Eratosthenes benchmark (prime numbers benchmark), and ran it in 3 configurations: Atari Basic, ACE C, and Action!, and the difference was mind-boggling. The screen DMA was turned OFF for the test, to give an equal comparison. My most optimal Atari BASIC code ran the 10 iterations in 68 minutes (yes, MINUTES!), ACE C did it in just over 2 minutes, a minute 45 seconds after running the code optimizer, and Action! did it in (believe it or not!) 12 seconds! At first I did not believe this time, so I put into the loop to print the result at the end of each loop, and left the screen on. At just over 18 seconds with the screen ON, it confirmed the original time.
A lot of good programs have been written in Action!, with or without some assembly code thrown in. BBS Express Pro! is a prime example of what Action! can do.

I just looked up, I'm ranting again, sorry. If you can find an Action! cart, get it. Don't bother with the disk version, its not an official release, and I had problems with it.

Hope this helps....

Bob,

I'd say you're right, but, like the original post said, no one
knows who owns the rights to these particular titles. JTS might own
all the stuff Atari owned but Atari never owned the rights to any of
the Scott Adams / Adventure International stuff. Still, someone must
hold these rights. I only wish I could find out who it was.

-Most entertaining and long term playability its Alternate Reality.
As
-for RPG I think it has to be Ultima IV. Ultima III was too
small/short.
-
-Steve

I Really like the opening music to AR the city (In fact, I like all
those Gary Gilbertson songs, tail beta, those demos (passionately and
others). and want Gen midi files of them. Anyone got?

The thing I hated about Ultima iv was (a) the way it accessed the disk
as you wandered around Sosaria (not just towne/castles/dung entry)
and (b) the Ankh that came with it broke off my keychain.

yogi

I still like Ultima iii (Too short? Too short? How long did it take
you to finish iii and 4?!)

4787. MTG Clearance Flyer

Newsgroup: comp.sys.atari.8bit

From: rldetlefsen@delphi.com
Message-ID: <pzE2Luw.rldetlefsen@delphi.com>
Source record: 77868

November 1, 1996
Due to slow sales and lack of involvement, I'm having a two step clearance sale.
Step 1:all orders postmarked through Dec. 31, 1996 will be discounted 30-80%. If enough postage is not included, items will be removed to adjust for it. Request the Clearance List. I'll post this list to Delphi, CIS(MTG96S.ARC), and on Internet when I find a place. Its 1225 lines(57K) as text, 538 lines, ARCED and UUENCODED.
Orders postmarked afterwards can be returned or held till after the Feb show, your choice.

Step 2:I've decided to stop reselling previously owned and clearance Atari merchandise as of February 28, 1997. This puts it after the Houston show. No more lot buys, no more requests, and little chance for back orders to get filled. If its not on the list, don't ask 'cause I won't look. Prices will be discounted 30-80% for sales and orders as of the show date, postmarked through Feb 28, 1997.
I'll keep what I want of whats left, return the consignment stuff to their owners, and send everything else to the land fill. Once its in the dump, its gone forever. If anyone wants to bulk buy, I'll make a price. I WILL continue with other projects. Global Atari is one.
I'll spend much more time writing software and doing hardware projects, for me anyway. And I'm starting a new service.

One quirk is that people tend to want the stuff I have only one of. That leaves 2, 3, or 4 people that don't get it. With these items being extremely rare and without support of the manufacturer(those that still exist) or release of copyrights, I'm going to act as a liason for "ESP", End user Support Program. Send me (on disk or via email, ASCII-no document files) a list of the stuff you aren't using and stuff you want to find. Include your email & postal addresses. I'll make disks to include with orders, send as requests, upload as email, and post online(ESPymm.ARC). All of you end users can then get together to exchange software or hardware as needed. If you bought something for a onetime deal, or decide that you don't like it, or just don't use it anymore, put it on the list with a suggested price, shipping extra.

Postal Mail or Email to an address above.

The updated Magazine list will be made available soon.

Toad's prices for used ST equipment are way too high, IMO. Last week, an
Atari dealer offered me a NEW FALCON for $300 (albeit 1MB, no HD).
Compare this with the $299 "special" Toad is offering on USED STe's.
Also, a few days ago on this very group someone was selling a VERY nice TT
for $300. I think people in this group ought to write to Toad and tell
them that we are not willing to pay these prices! I know that Toad has
long supported the Atari platform, but that is not an excuse to excercise
price gouging. If you agree, write to Toad "Toaday" and let them know
their prices are way off. I think the Atari community will be better off
with realistic prices set for equipment.

Doesn't NT need HUGE amounts of memory?
I got by with 5MB on my old,dead PC using Linux.
Anyway,most people will be using 95,not NT.(which is really not for
personal use)

: b/w screen and funny pictures.... well, at the time the mac only had a
: b/w screen, pc users had the joy of Hercules green monochrome (4 shades
: of puke if you upgraded to a color card, 4 ugly cga colors if you
: splurged on a cga monitor)... so what exactly do you USE computers for,

Sure,if you use a monitor.But if you use a TV/composite monitor like a
normal computer,you get more colours.
(with a CGA.MDA can't use composite video)
On my Apple,640x200x1 graphics gives you 16 colours.But 640x200 text mode
is B&W.I assume that my graphics card is turning off the "colour burst",
like the CGA can/does.That's why you see each mode list twice in a list of
graphics modes that the BIOS can take.But I don't remember seeing two
modes for 640x200.Does 640x200 produce colours on a Tv,anybody?

I use computers for programming,gaming and telecomunicating.
I was also using a spreadsheet on my PC for a while.
It was MultiPlan.It had all sorts of complex features,and it worked on a 64k
PC.(assuming DOS 1)

: anyways? The reason GUI's were invented were to abstract data to a
: degree where the user is in touch, but is able to sort through more
: information faster than text-based systems.

I don't see the point.Why does a text editor need graphics?
(and don't say to imbed graphics,you could use a GIF editor for that)
Why does listing files in a directory need graphics?
I remember some some GUI I downloaded for the atari.I wrote if off as useless.
(later,when I got a ST,it had the SAME interface)
I've never seen any benefit gained by Window's programme manager.
No new features.In fact,features in MS-DOS that I took for granted (like
control-C) are missing.

But the point isn't the Windows OS,but the GUI.(program manager and USER.EXE)
I just don't see any new feature provided by these,and many bad features.
(programmes can't switch graphics modes or use text modes.Memory leaks)

: look at your calendar...it's not 1986....

It not!?!

: Mac65 is great, but John Harris' MAE is pretty neat too, esp for upgraded
: xl/xe models. Even supports the 65816 opcodes, for the few of us that have
: 'em.

: >Should I learn Action? I know 6502 pretty much forwards
: > and backwards since I coded my 6502 sim package, but Action
: > may offer lots of higher level goodies?

: I'm in the midst of learning Action, and I gotta say, Atari should have
: licensed it and dumped BASIC. Modular programming, not too hard to use, and
: FAST!

: >I've never used Action, so im a bit confused by all the
: > talk about it. There is a cartridge and a disk version? There
: > is a version that requires a runtime and one that does not?

: All Action programs require the cart UNLESS you compile with the runtime
: package. Once compiled with the runtime, they do just fine on any machine.
: Russ Wetmore wrote HomePak in Action!; he wrote a series in ANALOG about
: Action programming. There's also a tutorial series available from Umich.

Does much bigger does the runtime make the programme file?

: Action only supports BYTE, INT and CARDs, though - floating point requires
: the toolkit and isn't quite as elegant or easy.

If modular and assembly programming is so easy,can you just create macros
that call the OS's FP routines?

: > : and e-mail it to anyone that needs it.I'll also post it to the Umich
: > : archive.
: >
: > I don't know about the 850,but the P:R:C can go at 9600.

: There are some revisions of the PRC that support 19200, some only
: allow 9600. The handler of the 850 interface allows you to SET 19200
: baud, but it fakes it and does it buisness at 9600 anyway.

Actually,that IS supossed to be 9600.The 850 has 9600 listed twice.
The P:R:C handler just assumes that the 9600 is reall 19200.
This means that some programmes,meaning to get 9600,may get 19200 instead.

: > Perhaps 19200 could be done with ANTIC de-activated.

: Why? The SIO bus can easily sustain transfer speeds in excess of 56000 baud.

Yes,but the 6502 can't shift the byte out that fast,aparently.
(you're talking about POKEY's shifting speed)

: The only speed restriction is due to poorly written handlers. I commonly
: use APE's R: handler to talk at 56k BPS via the SIO port to
: my PC modem.

I think that the APE handler just gives the byte to POKEY to shift out a
bit at a time.But the POKEY chip doesn't do all the same baud rates as RS232.
So the 850/P:R:C handler just manualy shifts out the byte a bit at a time.

The last I read,APE only did 19200 on the R: port.It did almost 58k on
disk access.Logic would dictate that it just sends a bit at a time (to POKEY)
and that it's just a better handler than the one for my P:R:C.
(in disk access,it sends a whole byte to POKEY at a time,and POKEY handles
the shifting)

I hope I made this clear.Of course I could be wrong about the whole
thing,but my explanation explains why R: handlers (and T:) don't make the
usual SIO noise like disk drives and et cetera,even when at 19200.

: You might improve the performance of a poor hander by turning off ANTIC
: but the best solution is to just write a better, faster handler.

Maybe 19200 is possible with a better handler.Beyond 19200,I don't know.

Does your APE make any noise when "talking" with your modem?
If it doesn't,then it's sending bits.If if makes the (non-ultraspeed) disk
access noise,then it's sending whole bytes to POKEY.

If the P:R:C does use bit access,I always wondered why it doesn't supply a
clock signal to the Atari so that POKEY could use the normal RS232 baud rates.

: Hello Robert, this is how I transfer files between my 800xl using an 850
: Interface and my Atari ST. It should work for you. I don't have a Null
: Modem Cable or an SIO2PC. Bob Puff of CSS told me that neither the P:R:
: Connection nor the 850 Interface can reliably do over 2400 Baud. I have a

I think you mean 9600,not 2400.

: Modem hooked up to my ST and a 2400 Baud hooked up to my 800xl using an
: 850 and BobTerm. To hook the 2 Computers together, I string a long Phone
: Cable between the two Modems and plug them into the RJ-11 Jack (RJ-11?)
: that usually plugs directly from the wall jack. Set both Modems at
: matching speeds. No higher than 2400 Baud or the 850 (According to Bob
: Puff) will drop Characters. Have the 8 Bit to send the Originate Signal
: with BobTerm and Answer on your PC. If necessary, reverse which Answers
: & Originates. Once you've Connected with BobTerm you can transfer with
: Y-Modem Batch or even F-Modem Batch (If PCs Support F-Modem).

huh.I always wondered if that would work.I could never do it.
Of course what's the point?
Why not just bypass the modems and connect the RS232 ports of the Atari
and PC via a null modem and gender changer?
(which I always call the "Gender Bender")
If downloading to the Atari,you can use A-Tar-Z modem,from umich
archive.(via FTP)

```
(Doc asks why not use a BASIC usr for disk i/o.)
10 close #1:close #2
20 open #1,4,0,"file1.ext"
30 open #2,8,0,"file2.ext"
40 trap 100
50 get #1,x
60 put #2,x
70 goto 50
100 trap 40000:close #1:close #2:end
```

Last time I did this, I use it to get rid of 13 bytes at the
beginning of a A8 file I transferred to A8 on a hp48gx. The
hp put the 13 bytes of garbage at the beginning. You can use
it to, say put a small header on, etc.

```
10 close #1:close #2
20 open #1,4,0,"file1.ext"
30 open #2,8,0,"file2.ext"
40 iocb1=848:iocb2=848+16
50 poke iocb1+2,7:adrhi=int(adr(a$)/256):adrlo=adr(a$)-(256*adrhi)
60 poke iocb1+4,adrlo:poke iocb1+5,adrhi
70 poke iocb2+2,11:adr2hi=int(adr(b$)/256):adr2lo=adr(b$)-(256*adr2hi)
80 poke iocb2+4,adr2lo:poke iocb2+5,adr2hi
90 poke iocb1+8,1:poke iocb1+9,0:poke iocb2+8,1:poke iocb2+9,0
100 x=usr(adr("hhh*LVd",16)
110 error=0:status #1,error
120 if error<>0 then close #1:close #2:goto 500
130 x=usr(adr("hhh*LVd"),32)
140 error=0:status #2,error
150 if error<>0 then close #1:close #2:goto 500
160 goto 50
170 rem I forgot 5 dim a$(20):dim b$(20)
500 ? "Error #",error
510 end
```

Now, that was a bit annoying, I don't remember stuff like this
and have to look it up. It took me an hour, during which time
I argued with my daughter, did my constitutional and just
generally agravated about it.
Now you know why I just prefer just to do the first one, Doc?
(And I didn't debug the code and probably have errors in the
second one.)

4796. Assembler, Action!, and copyrights

Bill W makes a good point. I'm pretty sure you can still buy "legit" Fine Tooned packages for Action, Mac65, Basic XL, Basic XE, and all the rest from B&C Computervisions at 408-986-9960.

One possibility...
There are two sliding switches in the back of the drive that determine which number drive it's identified as. They have to both be slid to the left (if you're facing the back of the drive, looking at the switches) to allow the computer to see it as drive #1. I use a pencil to get into that little hole to push them over.

>Any help would be appreciated.
>peter@vis.co.za
>
>Thanks

When you start the emulator, add a line to reference the disk image-

for example:

XF25 MULE.ATR

this will place the ATR image file as disk drive 1 when the emulator
starts. You can add up to 8 ATR files on the command line.

XF25 MYDOS.ATR DISK2.ATR DISK3.ATR etc etc

If you dont want basic when you start I think that adding a switch
(-NOBASIC) will work. Or try SHIFT+F10 when it's running to re-boot
without basic.

Good luck.

Steve.

I also discovered this trick years ago. The clue that tipped me off was
that there was no option for a text window in the GTIA modes. Turns out
the text would be unreadable since GPRIOR affects mode 0 the same as does
mode 8 to get the modes 9, 10, and 11. (You could get around this with a
DLI, but standard graphics modes were always simple display lists.) The
only commercial software I've seen that seems use this trick is Murder on
the Zinderneuf.

I suspect they're trying to liquidate their remaining inventory without
too much of a loss. Now that they're in the PC business, all that old
ST equipment is taking up room and costing money to store, heat, and
air-condition. If you mention prices, they'll probably come down.

I thought STeve Kipker's STeve's Atari Sales was the last Atari-only
bastion, but even STeve has been forced to go Macintosh. But he hasn't
made the intimations that he is dropping TOS support (like Toad has).

> Toad's prices for used ST equipment are way too high, IMO.

We set our prices based on two basic principles: supply and demand. In our experience the prices on that equipment are agreeable to the people who buy it, hence their inclination to purchase.

With all due respect if you would like us to lower our prices, you will need to either increase supply or decrease demand. :)

Ok will post to both. What you didn't tell us was where the drive selection switches were set. From what you are saying it does not see the drive out there as D1:. If you had a problem and the computer actually accessed the drive you would have BOOT ERROR all over the screen as it attempted to access a bad disk or a disk it couldn't read.

Look at the back of the drive, right next to the power hole there is another hole, it has a set of switches in it..if you see a black and a white set one to the right or left of the other, then the drive select is not set right. Move both all the way to the left so that the black shows and the white is directly behind it..This is D1: setting. If the drive setting is correct, inside the drive on the side card all the way to the back and about in the middle is a LM 3086 or a CA3086, this can cause the drive not to be selected by the computer...my guess its the drive select switches..??

: Sanyo MBC 550/555 User's Handbook, by WSI (what the heck is a Sanyo MBC 550?)

The Sanyo MBC 550 is a 3.6MHz 8088-based machine that runs MS-DOS.
Apparently it shipped with 128K, but was expandable to 256K.
It had an 80-column display, and 640x200 8-colour graphics.
The 550 came with a single 160K 3�-inch floppy drive, and the 555 came
with two drives.
It shipped with WordStar and CalcStar, BASIC and some other software.
The thing looks like an old VCR with a keyboard or something.

I've never seen one, I've only seen it's picture and some basic stats in
a book I borrowed from my university's library. Reference is:
Longley, _The Microcomputer Users Handbook 1985_, p.286. (Sorry, that's
all I wrote down - so I could find it again.)

If anyone has any more info on the machine, I'd love to hear it.
Unfortunately, though, this is off-topic for most of the newsgroups this
is posted to. ;)

> do up to 19200 (selection in BTM) or is ther a way to reconfigure
> BTM/the handler to go faster? Inquiring minds want to know. Heh...

You can just boot BobTerm w/ APE and it will load the
hander for you. The numbers you see at the top of the
BobTerm screen are just placeholders, they dont really
represent the actual baud rate.

For example, the 'slot' that normally uses 19.2k in the R: handler
I replaced with a 56k handler. So the screen says 19.2k, but
the handler does its job at 56k.

When you deal with a device like the 850/PR connection, the
data bus transfer rate is not the bottleneck restricting your
communications to 9600 baud. This is sort of an
'urban legend' with the Atari. I constantly hear stuff
like 'the sio port can only work at 9600 baud', etc.

The real problems are:

1) the UART/RIOT/Controller in your device just cant keep up above
9600 baud. I.e. the atari is pumping out data fast
enough, but your interface is a dog.

2) your handler cant get data from/to the atari fast enough to
work above 9600 baud. i.e. your interface is keen, but
the handler is written in turbo basic :)

Because the UART in most PC's is designed to offload the task
of sending/recieveing data, even the slowest PC's can usually
keep up with 56k communication when not time sharing and with
a little creative interrupt handling.

I believe the 850 uses a 6507 and a RIOT chip to shuffle data
around (im not sure about the RIOT, it might be another atari chip) and
can only go so fast. If you wrote a new rom for the 850 it
might be possible to boost its speed upto 19.2k or above.

Sounds like a project ;)

Steve

I have the MAC/65 manual as a text file. A small part is missing,
though. I don't exactly remember where I got it from, but i do
remember it had that part part missing when I got it.

I just read about the Atari 8bit Manual Archive, and I think it is a
great idea. I will check it out tomorrow and if nobody has uploaded
the MAC/65 manual by then, I will 'up' mine, and other stuff I might
have.

Maybe somebody with the official docs can then supply the missing
part. The part I'm missing falls between chapter 3.5.4 ("Operators:
.OR .AND .NOT") and 3.5.8

Terry,
That info is in a couple of places. Try the FAQ (see the message
Welcom to comp.sys.atari.8bit for the location) in a message above. It
is also detailed in the program files for SIO2PC and APE10x, both
available at gopher://gopher.archive.umich.edu:7055/11/atari/8bit.
There are other places, but I can't remember at the moment.

Message-ID: <59c7ra$clc@login.freenet.columbus.oh.us>
Source record: 77815

Since everyone is making up new modes,I thought I'd get in to the act.
Here's the new GTIA text mode(s).

```
10 POKE 740,PEEK(740)-16:GRAPHICS 0:F=PEEK(740)*256
20 FOR I=0 TO 15
30 FOR J=0 TO 7
40 POKE F+(I+65)*8+J,I
50 NEXT J:NEXT I
60 POKE 756,F/256
70 POKE 623,192
80 SETCOLOR 4,0,8
90 FOR I=1 TO 15:? CHR$(I);:NEXT I
100 ? :GOTO 90
```

This will allocate 4k (16 pages of memory) from the top (above graphics
memory),activate a RAM character set,create said character set,switch to
GTIA GR.11 + GR.0,and print out some colour bars using the RAM character set.
Basicly,this gives you 40x24 text mode,with each character being 2x8x16.
This is the same as GR.11,but since it's text mode,there's only 1/8 as
much data to move around.Good for BASIC or modem games.
(note:MyDOS's DUP will switch back to the ROM character set,but doesn't
de-allocate the memory)
Switch the last number on line 70 from 192 to 128 to get GR.10+GR.0 mode.
Switch it to 64 for 9+0 mode.
(and switch the last number on line 80 from 8 to 0 to make the bars look
right in 10+0)

Notice that I list it as 11+0.You could also have 11+1 or any other
combination of CTIA mode (set with the display list) with GTIA mode.
(set with GPRIOR (POKE 623))

Hey,you know that I had to upload this from the Atari.I used FlickerTerm
and it's not half bad.

Have you tried checking the Drive # switches at the back of the 810?
there are two tiny slider controls, and both should be to the left to
set it for drive #1. You should be able to see a diagram showing the
settings as well. If this doesn't get it working, I would say that
there is something wrong with either the cable, or with the 800
itself. Hope to hear from you with good news..

Steve.

```

: Now you know why I just prefer just to do the first one, Doc?
: (And I didn't debug the code and probably have errors in the
: second one.)

I have "Mapping The Atari" so all the numbers are at my fingertips.
I was fooling around with ACTION FONT and needed a way to load my
character set.(which used artefacting to get colour)
I had the machine code routine from "Mapping The Atari" so simply poking
in to a IOCB was all there was to it.The IOCB locations were also in
"Mapping The Atari".
I guess it seemed simple to me.
You know of course that you'll need TurboBASIC to run these programmes.
(or at least to convert them from .LST to .BAS files)

I have the instructions for the Xformer cable .. These were published in one of Darek's direct mailings. I've scanned the page, converted it to a MS Word document (11K in size). If you need this info, let me know via e-mail, and I'll send along the file as an attachment. The total size of the file (after encoding for transmission) is about 16K.

>>peter@vis.co.za
>>
>>Thanks
>
Peter,
First off, you have to have the program in a disk image file (.XFD or .ATR) You'll need on of a few programs to get it there. IMU14.EXE is one. This is available at gopher://gopher.archive.umich.edu:7055/11/atari/8bit. I forger which directory Bill put it in, but it is there as IMU14.ZIP which has full instructions included.
Once it's in the disk image, then at your DOS commabd prompt (C:\XFORMER\>) type XFORMER (any switches like -J for joystick -S for sound) and the disk image(s) you want to run.
EX.: C:\XFORMER\>xformer -J -S dos25.xfs mule.atr

You then tell XF25 to turn off BASIC (check the key chart) then you should be at DOS (Disk Utility Package) Type L [return] D2:MULE.EXE [return] and voila. Mule should run.

Hope this helps.

Doc,
Actually, the GUI user interface does handle graphics and animation
better than DOS could. DOS also has that blasted 640 barrier. The newer
OSes remove that. At least Win95 does. Unix certainly does. NT
certainly does OS2 does. Win 3.1x still has it. Nasty thing to deal
with for configuring stuff. Of course machines like the Mac, Amiga
ST/TT/Falcon never did have to deal with that. I don't know about the
MAC, but AmigaDOS/Workbench has a CLI and the GUI in a nice
combination. The Amiga's interface looks and works very muck like the
Unix X-Windows.
Now. We should get back on topic... Atari 8-bit!!! Thanx for
listening... Heh..

My company, American Techna-Vision, still has a HUGE stock of Atari 8-bit printer interfaces. The MicroPrint interface by SUPRA will connect any standard parallel printer to any Atari 8-bit computer EXCEPT the 1200XL. We include simple step by step instructions that guide you through the process of removing a resistor from the circuit of the 1200XL that prevents the MicroPrint (and other devices)from receiving power through the +5VDC pin. The MicroPrint sells for $9.95 plus $6.00 shipping/handling. Contact:

American Techna-Vision

: - bostone

C.S.S. sells "Legit" copies of OSS/FTe products. Personally, I would deal with C.S.S. before I dealt with Mike Hohman direct. He billed my Visa card for three Sparta X Roms and never delivered. Almost a year later, K-Products (an agent of FTe) finally delivered two of the three ROMS after finding out my situation.

The only reason I never called the Royal Canadian Mounted Police and laid a complaint of fraud, is because I consider Mike a "friend". However, Mike seems to have disappeared. I am disappointed in Mike. He should have looked after me ASAP, as soon as he found out I was not sent the ROMS for which I was billed.

My advice is, if K-Products, B&C, C.S.S. etc have FTe products, buy them there and don't try and get it from FTe directly.

: Toad's prices for used ST equipment are way too high, IMO. Last week, an
: Atari dealer offered me a NEW FALCON for $300 (albeit 1MB, no HD).
: Compare this with the $299 "special" Toad is offering on USED STe's.

I agree Toad has High prices.

: Also, a few days ago on this very group someone was selling a VERY nice TT
: for $300. I think people in this group ought to write to Toad and tell
: them that we are not willing to pay these prices!

Why should I? I vote with my pocket book. I am not willing to pay those
prices, so I wont. Toad loses a customer. They have a right to ask whatever
they want for their Atari stuff.

: I know that Toad has
: long supported the Atari platform, but that is not an excuse to excercise
: price gouging. If you agree, write to Toad "Toaday" and let them know
: their prices are way off. I think the Atari community will be better off
: with realistic prices set for equipment.

I agree here. The Atari community should have realistic prices. Toad
doesn't have those realistic prices, so buy used. I have never understood
how Toad became THE name in Atari. I wont buy from 'em.

You're supposed to find the treasure, following the same route they used in the movie. In one-player mode, you have to switch between the two characters by pressing the fire button with the joystick centered.

Every level is differnt; it's a very intricate game, especially for such as system as the Atari. For example, in the first screen, for example, you have to use the counterfeit money machine to distract Ma Fatelli so you can go downstairs and escape into the fireplace. Also, in the ship level, Slunk cannot be harmed by the Fatelli family since he is one of them. There's a bunch of other stuff too, and it's MUCH more tied-in to the movie than anything Nintendo ever put out.

>3) I'm interested in finding out what everyone thinks is the best Role

>
>>>>
Missed you original post but saw it on another reply someone made. It
sounds like the drive spins up O.K. so here is what I think your problem is:

On the 'Side Board', towards the rear there is a 'CA/LM3086' chip in a
socket (14 pin DIL). Replace it.
I've said this before and I'll say it again: Do NOT remove your SIO cable/s
while the Power Supply is plugged into the rear. Doesn't matter if power is Off, be
sure the Power Supply cord is removed before you plug in or unplug the SIO cable.
I know it sounds dumb but there is a reason. About 1 out of 5 times the '3086' chip
will blow. No, I'm not going to try to explain it and you would have to be an Electronic
Technician or Engineer to understand.

Good Luck; Rich Mier

How does one post this tactfully?..Possibly not possible?

We as users on the Internet have access to many items not available to others. Now weather you realise it or not...one asks for Documentation for a specific program, another replies I gots it will send it to you.

All documention to Atari 8-bit programs are covered under the Copyright Act!...Soon Congress is going to levy rules and regulations under pressure from those with big $$$..

There are those of you out there that say no one cares its an old product/manual...well my friend (maybe not?) you are wrong..I am sure there those out there capturing every violation of a Copyright document/software ect...and once the Law is in place..those of you that have given freely will definatley reap what you do not wish.

Suggestion..?

If you have documentation for something someone wants and you no longer have use for it, send them the item in original state..nothing wrong with this..saves you a lot of grief in the long run..??

I have seen several court case sent to me relating to Piracy..ect but once Congress passes what the $$ people want these cases will go out the window and all are liable.

I am not saying don't help a fellow Atari 8-bitter, but if you do do it right..Old saying ...Cover your butt...no one else can!!

Sorry to take up your time..

Bob

Well, I use SynAssembler myself.
Don't see or read much about this nice Assembler in the newsgroups though, but it is still my favourite Assembler.

I think it is easy to use. The debugger is perfect too.
Although I must admit, I never used other Assemblers, besides the Atari Assembler that is...

Well, I tried to order the official copy of MAC/65 with C.S.S., Bob
told me that FTe didn't supply him with those cartridges anymore for a
really long time already (but then again, this is already 2 or 3
months ago). When I was in the USA on a holiday, and visited B&C,
they didn't have MAC/65 either, same story, FTe didn't supply them
anymore with a copy.

Because I WANT official stuff, I don't bother laying my hand on an
unofficial copy. But I CAN understand the people who do!
What else is there, when it seems that the official way is not longer
possible? Tell me.

Anyway, that's my cents worth.
Bo.

Something you may wanna know...

They can't really sue me without first asking me to take the thing
down...

I could still be sued first theoretically...but they would have to
prove loss of income to get any money, and possibly intent to fraud.

Nobody is going to bother running up their legal bills if you take
their stuff down if you ask.

Just think of O.J. ... He may have been proven innocent, but it cost
him a bunch of moola... and no company is going to give much of a damn
for the reason of high legal fees that would outweigh the benefit (if

there is one, that is.)

Just look at the various manual archives on the net...

History of Home Videogames Page: http://www.sponsor.net/~gchance
Atari Gaming Headquarters: http://www.mindspring.com/~keita
and others...

and no one gave a shit!

That's why I ain't that worried about it... hey, just how worried about the Comm. Decency Act are you?

4860. Memory upgrade for Atari 400??

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-21 00:00:00 UTC
From: Ronald T Kneusel <rkneusel@post.its.mcw.edu>
Message-ID: <Pine.ULT.3.90.961221101132.14165C-100000@post.its.mcw.edu>
Source record: 77767

My friend has an old Atari 400 that he is in the midst of fixing (broken pin on the cassette port)

I'm not an Atari person, but I noticed that the RAM card has 4k chips on it, though it was labeled as 16k which was then crossed out with marker. I know that the Apple II can handle both 4kx1 and 16kx1 chips. If I replace the chips on the card with 16kx1 chips from an Apple II, will the card handle it?

Yes, I could wait until he finishes with it and just try it, but since I was here looking I thought I would ask..

Please email replies, I don't read this group. Post if you think it would be of benefit to others as well.

Merry Christmas!

- Ron Kneusel

How can they be THE name for Atari? Maybe in some 16-bit persons eye. But you see, this is a 8-bit newsgroup. Considering they only sold crappy used software, without boxes or docs, for the 8-bits, at inflated prices, they have no weight around here.

This is an 8-bit newsgroup, and they are advertising ST stuff on here??? Sheesh!

Laws are not retro active.
It is illegal to pass a law and then prosecute someone committing a crime against that law BEFORE it was passed
example
I steal a car, but stealing a car is not illegal RIGHT WHEN I DO IT.
A month later, my town passes a law prohibiting people from stealing a car.
They try to prosecute me for the car theft- this is unconstituional.

If you cant send manuals in an electronic form, how do you all those people who right "how to" books do it?

How many people do you know that have an illegal copy of Lotus 123 and a book such as "easy 123" "123 for dummies" etc. etc.?

4864. Re: Copyrights and the Atari 8-Bit

"how do all those people who right how to books do it?" huh? well,
the writer can do whatever they want until they sell the rights to the
publisher... then the publisher can say what you can and can't do with
the book.

writing a guide to simplify the use of a computer is not a copyright
infraction on the original computer manual... it is not a direct copy.
it may contain info on the same topic, but if this were illegal then
newspapers would sue each other every day because they were discussing
the same issues as another newspaper.... your argument doesn't make much
sense to me...

publishing a manual on the internet belonging to someone else is
illegal, unless the copyright is invalid (expired, overturned...)
However, I doubt anyone really cares, anyway... Atari doesn't even exist
as a company anymore! how could we be stealing money from them by
publishing their manuals? I doubt you can reorder a new print of the
owner's manual to the 810 disk drive from the printer!

don't worry about it! if you want to worry, worry about distribution of
atari software, not docs!

>Merry Christmas!

Well, you can try it. I'm pretty sure it'll work ok. The 400 can
address up to 64k of RAM, but you will only see 48k- this has
something to do with the ROM's taking up 10k and not allowing access
to a further 8k (address C000-CFFF, the ROM's D000-FFFF).
Actually, I think the card is 32k, being 8 x 4k chips? I'm just saying
that whoever struck out the printed "16k" should have written what the
amount of RAM really was. Anyway, good luck......
Oh, I just had a thought... maybe you should try using 8k chips, cause
I just realized that 8 x 16k chips would = 128k, and the 400 cannot
use this much memory, except of course using a specialized upgrade
card. Umm, This is also being posted to the newsgroup, so I'm sure
that someone there can help if you want to try and use 128k somehow.
Anyone?

Steve.

Source record: 77681

I found this old Pinball/Breakout TV game of about 1974 vintage at a flea market.

Runs on 6 C cell batteries and the sounds (get this) come out of the console, which is also the controller, complete with pinball buttons on either side and a paddle on top.

Is the Atari c-380 worth anything as an historical item? Predated the Altair too I would guess. This one's in excellent shape.

Perhaps. Then again, though, I worry about my physically write-protected
software failing on me.

I thought it happened to M.U.L.E. last night. I started to boot it,
it hesitated a couple of times, and gave me a red *** LOAD ERROR ***
screen. I think the drive was just a little dusty or something;
pulling it out and blowing into the disk drive's slot a few times
seemed to make it boot up just fine.

Nevertheless, though I have the original disk, box and all
docs, I *can't* copy the damned thing for a backup! That really
sucks...

that thing. I had to replace the pinball switches and am looking for a
comparable paddle pot to replace that control with!! but, to answer your
subject question, it is my belief that almost(not all but almost) all of
the 'hardwired' game systems came out before the 2600 or odyssey. That's
was one of the reasons the 2600 caught on so well was that you could
change the games you played in it. Hook it up and have some fun!!

4872. Trackball

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-22 00:00:00 UTC
From: Eric_Cron@addus.com
Message-ID: <59jv5t$ldf@kirin.wwa.com>
Source record: 77685

I came across two track ball thingamabobbers in the thrift store the other day. I don't know if you call them track balls, but they are the things that you use to play centipede and millipede. They were made by WICO.

I have two questions. What is the trade value for one of these (they work). Second, the package came with some wierd cord. It is a joystick connector that splits into two cords. One of the cords ends up turning into what looks like audio jacks, and the other one ends up in three audio things. What the heck is this thing for? It also came with a connector to turn one joystick port into two. Why the heck would anybody want one of those?

Thanks
Eric

James R. Gilbert (cb541@cleveland.Freenet.Edu) wrote:

I just realized more errors.

: (Doc asks why not use a BASIC usr for disk i/o.)
: 10 close #1:close #2

Since RUNning a programme closes all channels except #0,line 10 is unneeded.

: 20 open #1,4,0,"file1.ext"
: 30 open #2,8,0,"file2.ext"
: 40 trap 100
: 50 get #1,x
: 60 put #2,x
: 70 goto 50
: 100 trap 40000:close #1:close #2:end

Once again,ENDing a programme closes all files.So all these CLOSE commands
are useless.Also,line 100 should check that the error is 136(End Of File)
using STATUS,otherwise print out a error message.

: Last time I did this, I use it to get rid of 13 bytes at the
: beginning of a A8 file I transferred to A8 on a hp48gx. The
: hp put the 13 bytes of garbage at the beginning. You can use
: it to, say put a small header on, etc.
:
: 10 close #1:close #2

line#10 could be omited for above stated reasons.

: 20 open #1,4,0,"file1.ext"
: 30 open #2,8,0,"file2.ext"
: 40 iocb1=848:iocb2=848+16
: 50 poke iocb1+2,7:adrhi=int(adr(a$)/256):adrlo=adr(a$)-(256*adrhi)
: 60 poke iocb1+4,adrlo:poke iocb1+5,adrhi
: 70 poke iocb2+2,11:adr2hi=int(adr(b$)/256):adr2lo=adr(b$)-(256*adr2hi)
: 80 poke iocb2+4,adr2lo:poke iocb2+5,adr2hi
: 90 poke iocb1+8,1:poke iocb1+9,0:poke iocb2+8,1:poke iocb2+9,0
: 100 x=usr(adr("hhh*LVd",16)

Obviously,some of the characters in the above string need their 8th bit set.

: 110 error=0:status #1,error

Why are you storing a value in to "ERROR" when the STATUS command will
obliterate it several jiffies later.

: 120 if error<>0 then close #1:close #2:goto 500

HUH!?!
I don't think that STATUS CAN return a value of 0.What would 0 mean,anyway???
If you're looking for the end of file,STATUS returns 3 when the next read
would return a error#136 (End of File). (for most D: handlers)

```
: 130 x=usr(adr("hhh*LVd"),32)
: 140 error=0:status #2,error
: 150 if error<>0 then close #1:close #2:goto 500
```

Same here.Plus there is a huge amound of blank spaces at the end of
this(the above line) that would cause a "Truncated record" error.

```
: 160 goto 50
: 170 rem I forgot 5 dim a$(20):dim b$(20)
: 500 ? "Error #",error
: 510 end
```

: >--
: > The Doctor

: Doc,
: Actually, the GUI user interface does handle graphics and animation
: better than DOS could. DOS also has that blasted 640 barrier. The newer

MS-DOS is a OS,not a interface.IT's limited to 1024k.
(plus 64k in virtual mode)

: OSes remove that. At least Win95 does. Unix certainly does. NT
: certainly does OS2 does. Win 3.1x still has it. Nasty thing to deal

Windows runs in 80286 protected mode,so it wouldn't have this limitation.
MS-DOS could use swapping like UNIX.Since many computers run MS-DOS in
virtual mode,this would be easy.Extended memory can be swapped in anywhere.
MAny programmes do this already.But it would be nice if this was built
into MS-DOS.(so device drivers would be swapped out when they were closed)
Something like Macintosh's "resources" could be used to manage swapping of
programmes.
(a programme would tell MS-DOS when it was done using a segment of it's
memory.When it needed it again,it would ask MS-DOS for it.IF it was still
in memory,MS-DOS would tell the programme it's new address.(since it would
move around to reduce memory fragmentation) If it wasn't in memory,it
would be loaded up and the address passed back to the programme)

: with for configuring stuff. Of course machines like the Mac, Amiga
: ST/TT/Falcon never did have to deal with that. I don't know about the

: MAC, but AmigaDOS/Workbench has a CLI and the GUI in a nice
: combination. The Amiga's interface looks and works very muck like the
: Unix X-Windows.

Oh,X,another degradation to computers.I ran a pool game under it once and
I thought it had crashed,but it was just running extremely slow.
And X-Tank looks like it was running on a Apple.
(Ataris are not even THAT slow)

: Now. We should get back on topic... Atari 8-bit!!! Thanx for
: listening... Heh..

: > do up to 19200 (selection in BTM) or is ther a way to reconfigure
: > BTM/the handler to go faster? Inquiring minds want to know. Heh...

: You can just boot BobTerm w/ APE and it will load the
: hander for you. The numbers you see at the top of the
: BobTerm screen are just placeholders, they dont really
: represent the actual baud rate.

Placeholders???
They represent what ever BobTerm told R: to do.

: For example, the 'slot' that normally uses 19.2k in the R: handler
: I replaced with a 56k handler. So the screen says 19.2k, but
: the handler does its job at 56k.

Well,that sentence made no sense.What do you mean you replaced the 'slot'?

: When you deal with a device like the 850/PR connection, the
: data bus transfer rate is not the bottleneck restricting your
: communications to 9600 baud. This is sort of an
: 'urban legend' with the Atari. I constantly hear stuff
: like 'the sio port can only work at 9600 baud', etc.

The SIO port uses 19200 normally.Ultraspeed takes it up to 53200 on a US1050.

: The real problems are:

: 1) the UART/RIOT/Controller in your device just cant keep up above
: 9600 baud. I.e. the atari is pumping out data fast
: enough, but your interface is a dog.

Actually,with the 850 and P:R:C,the Atari IS the interface.
The 850/PRC just connects the lines of the SIO port with the modem,and
converts SIO voltages to RS232 ones.
So data flows directly from the POKEY to the modem.

: 2) your handler cant get data from/to the atari fast enough to
: work above 9600 baud. i.e. your interface is keen, but
: the handler is written in turbo basic :)

You could write a handler in TurboBASIC.You'd need either TurboBASIC or
the runtime in memory.But this answer seems more corect to me.The ANTIC
interupts the handler so that it can't do the timing right.

: Because the UART in most PC's is designed to offload the task
: of sending/recieveing data, even the slowest PC's can usually
: keep up with 56k communication when not time sharing and with
: a little creative interrupt handling.

Same with the POKEY chip.Simply a matter to connect it with a modem.
(I don't see a problem,since high speed modem support 19200)

: I believe the 850 uses a 6507 and a RIOT chip to shuffle data
: around (im not sure about the RIOT, it might be another atari chip) and

IF it does,I think it's just for receiving data from the Atari for the
Centronics port.
(and for sending data to the RS232 ports in write-only mode on the 850)
And for the control electronics of the interface to accept SIO commands so
it knows when to enter concurent mode.
(that is,when it directly connects POKEY to the modem)
And to upload the handler to the Atari.
For the 850,it also sets the baud rate for sending to a printer connected to
the RS232 port.(comnicating to a modem is done differently,the handler it
self generates the baud rate)

: can only go so fast. If you wrote a new rom for the 850 it
: might be possible to boost its speed upto 19.2k or above.

You could probably just upload the new handler as a file to this newgroup,
and people would just load it up as a file instead of downloading it from
their interface.

that when they become dis-ilussioned with life,they'll become nerds rather
than hoodlums.

Not that computers are a BAD influence,just too much much of one.

: So, would anybody have the *SOURCE CODE* to an/any old Atari Basic game
: that'll work on the 800? Not a disk image, but source I can print out
: (from unix, windows, or mac) for him to type in?

What exactly did you get with your Atari?
Disk drives?Modem interfaces?
You might be able to transfer the BASIC programme directly to your
Atari,with no typing.

If you must type it in,you can use a PC/Atari emulator to emulate
BASIC.This would allow you to list programmes to "D:".
You would need some virtual disk extraction tool to extract the LISTed
file from the virtual disk.

From BASIC you'd use
LOAD "FILENAME.BAS"
to load the programme.And
LIST "D:FILENAME.LST"
to list it out in text format.

No, they do not. The numbers are the result of a table lookup
and nothing more. Bobterm never sends 19200 to the R: handler, it
asks for baud rate #8, or #7 or whatever is wants. I just happens
those number correspond to those baud rates in the 'standard' R: handler.

No, USD ultraspeed uses a speed about twice 19.2k.

I _think_ that his point was that if a person types in various
programs they are a lot more likely to learn more about 'Basic' progamming
and a lot more likely to modify and learn about the programs they are
typing in. I know it helped me years ago.

Just a thought

>Sounds like a project ;)
>
The 850 can't handle 19.2k reliably, especially in full duplex. It uses
an old technique called "bit-banging", simulating serial I/O by putting
data into a memory location (usually a parallel port) and shifting the
data through it. The 810 drives do the same thing, as well as the old
ATR-8000. 19.2k is the limit in ONE direction, if it tries full duplex it
can get lost in one big hurry. I found this when I started just such a
project on the 850. I found plans for a homebrew R-Verter clone on the
web, I may be able to do some mods to handle RTS-CTS flow control. I'll
let you know....

WHAT!? Last time I check, few days ago, he said that he no longer had the cables in stock but will send instructions since they are easy to build.

It's like selling kit models and then saying they are criminals for not buying built models, even though only sell the kits. But I'm not surprised by alll of this...

So send me the instructions by e-mail, if he wants my money then I'll pay to register ST Xformer. Unless, I'm a pirate for downloading the shareware version...

Ok, to get it working you need to have a DOS virtual disk as D1. This means that when you start the emulator, you must add a reference on the command line to an ATR image file.

for example: (this should work with any emu you have)

ATARI DOSDISK.ATR (this is for XLit)
XF25 DOSDISK.ATR (PC Xformer)

Once you have started the emulator, it should be in basic- but there will be a slight pause while DOS loads. If you want to check that DOS is actually loaded, type DOS at the basic prompt, and that should take you to the DOS MENU. You can then press "B" (run cartridge) to return to basic. Hope this helps.....

Interesting problem you've got there.

Let me know if you've managed to connect the 800 to the internet.

As far as I know, there aren't any text browsers or internet mail
programs on the atari. Another problem would be the winsock.

Also, before you go any further, you might want to upgrade the 800's
memory.

Let us know how this progresses.

That's exactly what the toolkit does, but it's still a hassle, since the
usual print routines etc can't be used (they see Floating point as arrays
of 6 chars, I believe)

4891. How to convert "Super" (bank-switched) carts to files?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-23 00:00:00 UTC
From: Tony Ramos <ramos.15@osu.edu>
Message-ID: <32BEE528.7FF7@osu.edu>
Source record: 77624

Hi Atari fans,

I'm all set to go 'virtual', running all my old Atari stuff on Chris Lam's emulator, except for my favorite game: Atari's XE super-cart version of Mario Bros.

Man, is this a great port. It's got all the 'how-to' intermission screens, great animation etc. Trouble is, I think it was only released as a bank-switched Super cart.

I don't want to get back into hacking the 8-bit hardware, I just want a disk-based version of my current favorite game. So, has this cart been 'filed'?

I've seen disk versions of carts such as Food Fight, which, I believe, were super carts. As a side note, how are these dumped? I know that the cart program needs to be heavily modified to relocate the code blocks side-by-side rather than 'stacked' in the same space.

Any wizards care to respond?

-Tony R.

Do I understand correctly, in that, Mario Brothers is on Atari? I
thought it was a NES/SNES only game. Unless there is a different
version on Atari???

You're thinking Super Mario Brothers. Mario Brothers is older.

Since there isn't really any analog joysticks that are affordable, I
would rather see a modified Sega controller that uses all the buttons.
What I'm in the process of doing right now is modifying a (clone) sega
controller. the D-pad works fine, the B works as Fire, and C works as
paddle 0 (putting a value of 228). What I'm hoping to do is hook A up
to paddle 1, and using a resistor for paddle 0 and the start button.
Does anyone see a problem with this?

Well, I guess I didn't make my self clear enough.

The original Atari Joysticks were analog. I was planning to replace
the big stick with a smaller one (sortof like N64's). Then I'd place
the buttons that are on the stick along side of it.

This would require a new case and a differently "styled" curcuit
board.

Anybody willing to try this?

I am not a lawyer (standard disclaimer ;) ...but (AFAIK) aren't books
protected (US-copyright-wise) for something like 50 years, regardless of
whether they are in print? But OTOH, most 50-year-old books are still
readable (at least technically if not artistically) by the average person.
The same cannot be said for most 10+-year-old software. 10-year-old
software is much like 500-year-old literature in terms of public appeal,
except that the writers are usually still living. It will be interesting
to see how this all shakes out...

And another exception:

Much 500-year-old literature is taught in lit courses. I don't expect
to see anything about Atari DOS 2.5 to be taught in computer
science courses. So it's even *worse*!! :)

Hi. Paperclip was later released in a version that did not require
the "dongle." That by chance happens to be the version that can use
the extra mem on the 130XE.

Cheers,

Jon

What you need to do is find someone with either a Happy or Archiver drive,
and make one or two copies of that original disk, so you can keep the
original safe, and play off the backup. As long as you keep the original
disk in your possession, making a backup for safekeeping is perfectly
legal under the "fair use" clauses of the Copyright Act. The only thing
is, if you sell or give away the original, the copies must either go with
it or be erased.

Hope this helps...

You need to have a 'virtual' floppy in the 'virtual' disk drive. Or else the Atari 8-Bit won't know where to save your BASIC program to...

With most emulators there is a boot disk of some sort included. What emu are you using?

Will

(Doc makes many points about my posted code, I sent private
e-mail about it.)
One thing that is VERY IMPORTANT, Doc and anyone who wants
to code stuff.
DO close all channels before and after use of the channel.
Now, maybe Doc and Bill Wilkinson know that RUN closes
channels and END closes channels.
Two novice programmers (novice? intermediate). Me and
another person who I won't mention, wrote programs that
failed to close channels. The point is:
OUR PROGRAMS TRASHED TOM HUNT'S AND JOHN HARRIS'S HARD DRIVE
DIRECTORIES.
I don't claim to know what BASIC does, or ACTION! or any
other language about closing channels left dangling by the
programmer. I do know what happened to Harris and Hunt and
feel real bad about it. I believe there is/was a problem
with SpartaDOS not closing dangling open channels, and Tom
Hunt, I believe has taken steps to see this never happens to
him again. So, no matter what the language, what the
computer, it doesn't hurt and IMO is very important not to
leave it up to the OS, the language or anything else to
close channels, do it yourself.

Bob,

Your message is way too paranoid.

In case you've forgotten, it takes money to investigate and enforce laws. Who do you suppose would benefit financially by spending time and money to track down and exact revenge against people trading software that has virtually no commercial value?

Seems like you're confusing your personal dissatisfaction with the actions of others and fear mongering based on the threat of big brother. Do you REALLY think Congress has nothing better to do with money than track down people trading 10 year old, discontinued software?

Stating your personal opinion is one thing. Trying to control the actions of others by attempting to instill fear in them is another.

Get a grip.

Fred Thompson

>

I think we have a byte versus bit discontinuity here.

The chips are labeled and used as bit sized devices (ie -- 4kx1 or 16kx1).
The board (and most boards in general) is labeled in byte terms (byte=8 bits,
of course). Dynamic ram chips are generally either x1 or x4 devices,
ROM chips and todays Static RAM are generally x8 devices, but all may
be refered to either in bit size, or word size, or byte size, although
at the chip level one genrally uses bits. For example, a 2764 EPROM
is 64K bits, or 8Kx8, a 2716 is 16K bits, or 2Kx8, a 4116 RAM is 16K bits,
or 16Kx1 ....

I've never run across a 4K board for the 400, so I cannot venture an
opinion as to whether just swapping chips to 16Kx1 chips will work, but it
is certainly worth a shot. I know I've upgraded the 16K boards to
64K (48K accessible in the 400) by a few added addressing chips and some trace
rearranging and swapping in 64Kx1 chips.

If your going to the bother of swapping chips, it might be worth going
all the way to 64kx1 chips, and modifying the 400 for 48K.

4916. Cool Idea for Joystick...

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-23 00:00:00 UTC
From: rhkramer@fast.net
Message-ID: <59mb7c$os4@news1.fast.net>
Source record: 77716

Hi all. I have a cool (at least in my opinion) idea for a joystick.

It'd sort of be like the SNES controller.

Instead of the D-pad, we could put a small analog stick. There would be the normal two buttons on the opposite side of the analog stick, and below them would be the turbo A and turbo B buttons.

Does such a thing exist? Would someone be willing to make one?

4917. In search of either a 130xe,65xe, or 800xe

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-23 00:00:00 UTC
From: rhkramer@fast.net
Message-ID: <59mbe9$os4@news1.fast.net>
Source record: 77717

As I stated in the subject line, I'd like to find either a 130xe,65xe.
or an 800xe for a descent price.

My 800xe broke down two months ago, and I'd like to find a replacement
that can run all of its programs.

Post, but please CC: me a copy.

Thanks, rhkramer@fast.net

BTW: I'm looking to spend $50 or less. (Less being the key word).

This is basically the 5200 joystick. The only difference is that the 5200 controller has a keypad and would have to be rewired to work on an XL,XE,400,800. The axes would be read though the paddle controller. Perhaps some PIA strobe code could be whomped up for any extra buttons you want to add. Only one problem, though. Even the capability for analog sticks existed on the 8-bit computers, all of the games use digitial. Except for the 5200, but it is a special case game machine version of the basic 400,800,XL architecture.

All of my buddies with Commodores and IBMs had pirated software
hanging out the wazoo. The Atari was not particularly special in this
regard (although industry may have had an erroneous view of this). I
think that Atari's idiotic marketing policies had far more to do with
the company's demise.

Okay, here are some ones I remember liking....

robot thing (ces demo)
spaceship (ces demo, made me think of "pigs in space")
swan demo
bounce
ballsong 1 & 2
'magic' (awesome 256 color kaleidoscope type thing, only 12K!)
a demo from Europe called "POP Demo"

I have seen numerous others mentioned here, but I have never seen
them.

Cheers,

Jon

That must be before the old 2600, because the joysticks for the 400, 800,
and the 8 bitters used just switches. Only the paddles used the analog
capability of these computers.

I've looked at Toad's website. Yes, the prices are higher than you can get from a second-hand shop or a direct used sale. That's the nature of being a dealership--on used equipment sales, you can't compete with what somebody just dumping a machine will ask. Somebody just dumping a machine can't take your credit card and be a legal entity you can take recourse against if there's a major problem, either.

As for your statement about supply and demand, you can apply it to them just fine. Don't demand their machines and you're applying it. What's the problem there?

Nobody's asking you to be benevolent. If you think Toad's prices are too high there are other places to get the machines from. They're setting their margins, other people have their own. Personally, I think they're too high for me, so I'm counting on a sales post here to come through. But others may disagree.

The ORIGINAL Mario Bros. was released for Atari, You may be thinking of Super Mario Bros., which was a Nintendo exclusive. Some enterprising European programmer (I believe German) wrote a decent "semi-clone" of SMB, simply called BROS, in compiled TurboBasicXL. I have it, and it plays very well, although it takes a while for each new level to load in. I play it under SpartaDOS X, putting it all in Ramdisk and swapping that as D1:.

Bingo. To give him a sense of hacking, as opposed to treating it like an
appliance. And perhaps to plant a seed of nostalgia for the pre Win-tel
world...

(the implications of that last point are left as an exercise for the
reader ;)

Jeez! Stop trying to manipulate the poor kid! ;) I think you should at
least get him a disk drive for the thing if you honestly expect him to
be able to use it. Those cassette tape drives were ridiculously flaky.

I have a selfmade RS232 interface directly in my SIO-Port. I don't need a
RS:-handler for Bobterm and there are no problems with up to 9600! I use
Telemate under OS/2 in background execution and save binaries into D8: by
using XModem protocoll.

nothing of them are really good! The best demos are made by some european
groups like (ex)WFMH, HARD and german sceners. You can find some amazing
demos in the UMich archiv.

here the _very_ best demos:

Joyride (H.A.R.D.) (hungarian group)
- brilliant remix of song 'Joyride' by Roxette
- incredible sfx in graphics and digi sounds
- best of demo art!
- new I/O routines, fractal moving *and* disk acces (&Music!)
- morphing, wrapping and multicolor-modes!
--> can't find a working version on UMich :(

The Top #3 (WFMH) (polish group)
- compendium of good ..small.. demos
- amazing dancing girl, from AMIGA game and uses up to 320k!
- interesting bob effect (hundreds of bob's moved on screen)

Cool Emotions (H.A.R.D)
- not as good as Joyride but funny checkboard sfx
- nice music routines
- very good amiga like plasma

File version of VISDOM Demo (pal only!) (german programmer)
- extremous colorfull graphic sfx!
- very good pokey music
- very impressive ! (by a pal tv and a pal XL, can't miss it!)

> I have seen numerous others mentioned here, but I have never seen

If you check the history carefully, you'll find out that Atari, particularly under Warner, was especially paranoid about piracy. And Atari, also under Warner, had hit a point where they simply couldn't afford to market or advertise the way that they should have as a result of such disasters as the ET game cart and the collapse of the videogame market.

>Power without the Price was Atari's idea for a slogan. And a load of Crap.
>It defies logic and goes against All the Laws of the universe. Like "A Man

In 1988, the cheapest PC Clone available in my area was an (PB)
8Mhz, 8088, w/ 640k & 10Meg HD, dual 5.25 floppies and a cga card.

It cost $1000.

A 520ST (w/ SS drive) cost $300.

Despite the appearace that that Clone outspecs this ST, the
ST ran circles around that machine and was quite a bit more
useable.

Just because you can't manage it now; it doesn't mean that it
never was.

Power without the Price, existed once.

It is not a far stretch to say that that is why many of us are here.

I had a P:R:C for a while until I got my MI/O. Best move I ever made
for my 8-bit.
Actually, Bob Puff designed his own hardware, while ICD used the specs
forr the 1090 expansion box.
If I could have afforded a Black Box, I would have bought one of them
instead. As it was I bought the MI/O (256K) used for $80. at the time.
That was a great price then, since MI/Os were still being produced by
ICD.

> He didn't seem to know why SpartaDOS ended up writing to the wrong floppy

> (I read this in the docs for SuperARC/UNARC)

You're not talking about me. I never had this problem. I've written
some rather complex, disk intensive BASIC XE programs that used
extensive file management (SDX version of NOTE and POINT). I never had
the time to learn MAC/65. I wish I had, but that's another story.
Anyway, this topic has been replied to on numerous occasions and I
guess the 'who wrote what' has gotten foggy. I replied to the original
guy (I forget who that was now) about file x-fers using a null modem and
a couple of comm programs. I don't know where all this other stuff came
from.

> Thanks for any help.

Leon,
One Way: Go to gopher://gopher.archive.umich.edu:7055/11/atari/8bit and look for the file IMU14.ZIP. This program allows you to copy files into and out of .XFD and .ATR files on PCs and Amigas. Then move the file(s) via null modem to your Atari.
Another Way: Usine SIO2PC or APE, simply copy the file from the .ATR or .XFD image to the Atari disk. Obviously the better way if both machines are near each other. The former way is a bit more complicated, but works well.

What does that mean? Does that mean if I interrupt more than X-amount of raster lines, my program will screw up without fail, or can I only use one DLI?

I doubt it's some weird quirk, it has to be a relatively normal quirk, because the emulator seems to take this quirk into account. Perhaps I'm using the wrong emulator and need to go lug out my 800XL.

Source record: 77656

I'm coding a program that lets one program run continuously (more or less) in the background, and does some DLI's over it.

Problem is, if I use more than one DLI on the screen, my background program starts to nuke itself.

I worked on my first DLI and it worked. So I changed VDSLST at the end and put another DLI in after it, well after the original DLI could complete, mind you, I made certain of that. Then everything started to muck up. So I took the VDSLST change out, and made it so that all DLI's would go through a master routine that would decide, in less than one scanline, which routine to execute. That caused the exact same results.

Just recently I discovered that there was nothing inherently evil about the second DLI, because I replaced the first one with it and the program ran rather smoothly. It just didn't want them both running on the same screen, or something.

I am pushing and pulling all the registers, including P. I don't know what other precautions to take. Are there any others? Is there some magic register I must poke into that says "I just executed a DLI and I want to do another one, please quit breaking my program!"

I am using XL-It version 016, is that one too buggy to code with?

Power without the Price was Atari's idea for a slogan. And a load of Crap. It defies logic and goes against All the Laws of the universe. Like "A Man is worthy of His Hire." and "You get what you Pay for." and "If it sounds too good to be true, It's probably a Lie." and in Atari's case, "You sow what you reap" aka "What goes around, comes around." Atari trying to appeal to cheapskates was it's undoing. Don't punish Toad because of an Atari Slogan. They're trying to support Atari, stay in business and feed their families. I just received a Toad-M SwitchBox which will let me use a MultiSync Monitor on my Atari ST to do Color and MonoChrome on the same MultiSync. This will also be the Last one Toad makes as their Technician is leaving because not enough people wanting to keep him Employed with a DEMAND for work. I know about the Crap that Bonafide Atari dealers put up with. And how many don't appreciate them. I blame it all on Atari, especially their slogan "Power without the Price!"

: > Placeholders???
: > They represent what ever BobTerm told R: to do.

: No, they do not. The numbers are the result of a table lookup
: and nothing more. Bobterm never sends 19200 to the R: handler, it
: asks for baud rate #8, or #7 or whatever is wants. I just happens
: those number correspond to those baud rates in the 'standard' R: handler.

Just a difference of language.The standard handler has no 19200 speed.
The P:R:C just uses speed#15 to represent 19200.For the normal handler
that's 9600.

: > : When you deal with a device like the 850/PR connection, the

: >
: > The SIO port uses 19200 normally.Ultraspeed takes it up to 53200 on a US1050.

: No, USD ultraspeed uses a speed about twice 19.2k.

That's impossible since 19200x2=38400.That's supossedly the speed of a XF551.
(acording to the FAQ)
The ICD manual says that the US Doubled 1050 goes at 53200.
(the FAQ agrees with this)

I think you're confusing APE Ultraspeed with 1050USD Ultraspeed.
Remember that the Ultraspeed protocol involves DOS (or UltraSpeed SIO handler)
asking the drive what timer value to use.So different drives could go at
different speeds.

I agree, I started with a 1010 Program Recorder. It was slow, took forever to load and even after a long session of loading, I could still get a truncated error and have to start over. Then I bought a BRAND NEW 1050 disk drive. A Program recorder can be good if you have a 400 with too little memory to use a Disk Drive. If thats your dilemma, do the kid a favor and get him a computer with more memory and a disk drive. The Program recorders are getting a higher failure rate with age. At least with a Disk Drive you can use DOS and have more options.

: No, I meant 2400. I called Bob Puff and he said trying to exceed 2400
: would result in dropped characters.

Man,Bob must've had a crappier P:R:C than me.
He seems to be somewhat naive about ICD products.I always thought of ICD
and Bob Puff's stuff as being on opposite sides.
He didn't seem to know why SpartaDOS ended up writing to the wrong floppy
when you swapped disks while the file was still open.
(I read this in the docs for SuperARC/UNARC)

My P:R:C goes at 9600.In fact,I used it to post my GTIATEXT.BAS message.

You may be thinking of one of those graphical text term programmes.

: Now, maybe Doc and Bill Wilkinson know that RUN closes
: channels and END closes channels.
: Two novice programmers (novice? intermediate). Me and
: another person who I won't mention, wrote programs that
: failed to close channels. The point is:
: OUR PROGRAMS TRASHED TOM HUNT'S AND JOHN HARRIS'S HARD DRIVE
: DIRECTORIES.
: I don't claim to know what BASIC does, or ACTION! or any
: other language about closing channels left dangling by the
: programmer. I do know what happened to Harris and Hunt and
: feel real bad about it. I believe there is/was a problem
: with SpartaDOS not closing dangling open channels, and Tom
: Hunt, I believe has taken steps to see this never happens to
: him again. So, no matter what the language, what the
: computer, it doesn't hurt and IMO is very important not to
: leave it up to the OS, the language or anything else to
: close channels, do it yourself.

Well if you're going to use SpartaDOS,you can expect that.I still don't
see how closing a channel twice will help,though.

I can only guess that you used the channels used by I/O re-direction.
These are used by batch files and the PRINT command.
When SpartaDOS runs a batch file,the CP keeps the batch file open constantly.

I think that DOS XL did a better job in this department.Everytime a
programme was run by a batch file,it took NOTE of the current possition in
the batch file,closed the batch file,ran the programme,re-opened the batch
file,and POINTed back to where it left off.

SpartaDOS X's CP simply comunicates to SpartaDOS through SDX's special
interface.(the disk SPartaDOSes don't have it)
This interface allows 16 channels to be opened.Any channel opened through
the SDX interface wasn't connected with a CIO channel.This way,batch files
and I/O re-direction (batch files aren't simply re-directed I/O in SDX
like they are in disk SpartaDOS) don't get in the way of programmes that
expect to have all (CIO) channels (except maybe #0) to them selves.

: nerds, sports nerds (jocks), etc. They're all one-dimensional characters.
: If computer nerd-dom is any worse, it's the lack of social interaction
: (and thus skills) that tends to accompany it.

That last statement is exactly my point.

: But, let me ask: do you wish you had never learned about computers at an
: early age? Would you rather look at every computer in the world, and
: perhaps think that it's smarter than you?

(uh,I think PICO messsed up your formatting)
Hell no.I'd never want to be like my friends who constantly ask how to do
the same thing on MyDOS.(how to load ML and BASIC programmes and switch
drives/directories,mostly)
I like teaching,from my past,but it's always the same questions!!!

Alas,all my friends were computer nerds.Sometimes they'd bore me to sleep
with their marathon computer conversations.The most interesting of them knew
how to programme so he was interesting.But he learned on a TRS-80 Color
Computer.Of course they've all betrayed their computers (Atari,ST and TRS)
and gone on to the PC so he's just as in the dark now as the rest.
(I know quite a bit about PC software and hardware)

My prejudice is from the fact that I'm very active but they never do anything!
Of course the non-nerds I know never do anything as well...

: Bingo. To give him a sense of hacking, as opposed to treating it like an
: appliance. And perhaps to plant a seed of nostalgia for the pre Win-tel
: world...

Too True!
"Win-tel",I'll have to remember that!
Knowing about how the Atari REALLY works makes things like Windows seem
terrible to me.Even the classic MS-DOS stuff does.
I used a spreadsheet called Multiplan on the PC.It only needed 64k of RAM!
(including DOS 1.MP is pretty complex,too!)
Now you look for a Spreadsheet and the box says you need 8000k!!!
(8192k,to be exact)
People seem to think that's normal.
I asked about and people just said that it's that big because it can FAX
stuff.You know,since Windows has MS-DOS type multitasking,you'd think that
it'd be like UNIX and FAXing would be the job of some little programme filter.
Does Windows even have anything like a pipe or FIFO?
For those that don't know,UNIX systems usually have many little programmes
that work together rather than duplicating the same routines in countless
(HUGE) programme-files.

: (the implications of that last point are left as an exercise for the
: reader ;)

: 500 ? "Error #",error
: 510 end
```

You know,I tried out using STATUS to check for errors.You can't!
At least not for checking for errors after reads and writes.It just gives
you 170 (File Not Found) or 165(Bad Filename).I also check this out in my
Atari OS guide.Aparently,where as other handlers return 1 one for
normal(or some other possitive number to indicate some non-error status),
and a number 128 or more for a errror and put the status of the hardware
in DVSTAT,DOS just uses STATUS to indicate wether a file exists and is locked.

I was suprised because I remember reading that status code#3 meant that
the next read (or write) would cause a error#136 (End Of File).
But that must've been DOS 3.

4956. Atari Prototype Auction #1

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-26 00:00:00 UTC
From: Curt Vendel <cvendel@aol.com>
Message-ID: <32C2B6CA.859@aol.com>
Source record: 77665

ATARI PROTOTYPE AUCTION #1:

The following RARE items are available for auctioning.

RULES: Bids start at specified price and will go up in $10 increments. Updates will be posted daily to all bidders. Auction will go until Jan 10th 1997 and will then enter the GOING, GOING TWICE, GONE stage. All bidders who make it to the GONE section of the bidding are responsible for shipping costs. All items will be shipped PRIORITY ONE MAIL. Please don't bid unless you are serious about buying. All items are sold "as-is" and there will be no returns and/or refunds. No items will be shipped until payments are received and cashed.

Atari SALT Diagnostic Module: Enclosed in an Atari 850 interface, has 1 Serial SIO port, 4 Atari RS232 ports, power input, an RCA plug where the Parallel intreface would normally be, and 2 14 pin chip sockects, an HP seven segment ultra-bright LED display and reset switch. Unit powers on and doesn't cause any Atari that was hooked up to it to freeze. Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (3 Available) Minimum BID: $50.00ea.

Atari XL Salt Diagnostic Module: Enclosed in an Atari 850 interface, unit has PBI cable comming out of right side SIO connection cut-out of 850 module for testing parallel bus interface.
Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request.
(1 Available) Minimum BID: $75.00

EXTREMELY RARE: Atari 6402A Prototype Motherboard (only 3 exist!!!)
Prototype motherboard, apparently a test bed which has all the same components contained on an Atari 1450XLD "TONG" version motherboard including disk drive controller area, modem area, SC-01 voice synthesiser, Parallel Bus Interface. This unit has ports positioned on all 4 sides and does not appear to be a "commercial" product but appears to be more of a test design to condense the Atari 1450XLD TONG motherboard down to about 1/2 the size, (unit is NOT functional)
Minimum bid $120.00
Image will be posted on my webpage upon request

Atari XE Game System 8 port multicart prototype board:
A prototype test board which may have been a pre-design idea to allow the XE game system to contain and select up to 8 cartridges (this of course turned out to be built in BASIC and MISSLE COMMAND in the released version) The board is about 8" by 12"
Minimum Bid $50.00

Image will be posted on my webpage upon request

Atari XEP-80 Prototype:
Atari Corp design prototype of the XEP-80 system. Design consists of a mainboard, daughter card, DB-25 connectors and Atari joystick interface cable, this unit has never been tested and I am not sure if the current commercially released XEP-80 will work on this pre-design prototype.
Minimum Bid: $75.00
Image will be posted on my webpage upon request

Make all bids and requests for images to:

Curt Vendel
Email Address: cvendel@aol.com
webpage: http//:members.aol.com/cvendel/vaporware.html

4957. WTB: 810/1050 Happy/Archiver drive

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-26 00:00:00 UTC
From: ziggy29@netgate.net
Message-ID: <ziggy29-ya023080002612961255400001@nntp.netgate.net>
Source record: 77666

I'd like to have a disk drive which will allow me to copy some
of my copy-protected software (for my own backup use only, of course).

I understand that there are "Happy" and/or "Archiver" drives
available for the Atari 8-bit which can do this. I'm interested
in buying one. As I've never done this before, I'd need instructions
on how to use it if it's not completely straightforward (i.e. if
DOS 2.5 or MyDOS 4.5's "duplicate disk" works, I wouldn't need
instructions; otherwise, I probably would). I'd prefer a 1050, but
for the right price an 810 will do.

If you have one, let me know. If you know where I can find one
at a fair price, let me know that as well. While I generally know
a fair amount about the Atari, forgive my ignorance in this area, as
I've never done this kind of thing before. In the past, I've just
waited for the disks to suffer bit rot and make them unusable. But
I don't want to do that anymore.

One of the occasional recurring themes on c.s.a.8 (and, I'd imagine, newsgroups about the Commodore and Apple][among others) is that of copying software. One camp says that piracy is piracy, plain and simple, and can't be justified even if one knows that copying 1982-vintage software won't adversely affect the copyright holder by one cent. The other camp suggests that since no one commercially sells the software anymore, there's no one to be hurt by such copying and that therefore, it's not acceptable to completely shut out future distribution or acquisition of this software if the copyright holder has no plans to start making/selling it again ("I'm not hurting anyone by copying this floppy").

These arguments seem to contradict each other; sadly, they both have some merit in my eyes. I'd like to think there is another possibility, one which may not have been explored in detail, which I believe has the potential of eliminating the debate on the terms I've mentioned above.

I'd like to see some type of "middleman," a software "clearing house" so to speak, who could obtain a license to copy and redistribute software (but not necessarily own the copyright) from the copyright holder. Given this license, s/he could make copies of the disk and documentation (not necessarily looking like the originals but being somehow distinctive from the typical copy), sell them for (say) $15-20, giving (say) $5 to the copyright holder for each copy sold while pocketing the difference between the remainder and the cost of running the operation. Each purchaser would receive two copies of the disk--one for use and one for backup purposes.

Whatever the vendor--be it EA, or SSI, or Origin, or Sierra, or others--this place could work with them, pay royalties from sales to their respective copyright holders, and help pad their bottom line a bit with little or no cost to them. And I'd think it would be good for PR as well.

It seems to me that the old software vendors would have very little to lose under such an arrangement. They're not making anything off of the copyright today anyway, and there would be a low-cost legitimate source for the software you kicked yourself for throwing away in 1990. Furthermore, there would again be *no* legitimate arguments in favor of software piracy, as there would now be accessible commercial channels for buying the software through legitimate means.

Any thoughts on this? Has anything like this ever been seriously considered? There's no reason why this couldn't apply to Commodore or Apple][software as well...

Well, since a large majority of the Atari 8 bit software is still available from vendors, new in the box (I just spent $80 on some), those software houses are being hurt by the piracy. In fact, a lot of them have already closed down or are in the process of "clearing" out inventory because of the lack of demand for the software anymore. I recently had to track down a copy (or two *grin*) of Alternate Reality The City and The Dungeon. A set was a holiday gift to one of my younger brothers who loves Atari stuff almost as much as I. (The other set is safely tucked away in storage, never to be touched.)

Price? $20 each. Not, bad. Not great either, since I purchased the exact same set a few years ago for $12 each. Since I have finally gotten back in touch with the software/hardware vendors that I used years ago, I am planning on purchasing more software.

At the same time, I also want to download all the pirated stuff. Will I? Maybe. Will I purchase the software new as well? You bet. I'm a collector so, NIB is very nice. =) I own 4 legal copies of the AR series, but I play the pirated versions so as not to destroy my originals.

If after trying to locate a source for a particular piece of software, and I can't find it. I probably will try to obtain a pirated copy. ONLY in this case do I feel pirating is acceptable. However, as soon as a source comes up people should purchase the legal copy.

Anyone else?

Also, me in my dreaming state want to know if anybody has the desire to create an 8bit database of all parts (by Atari part number) and all software/hardware. I though of just running through old catalogs I have and typing in every piece of software I could find as well as who you can get it from now a days. If we all chiped in we could get it done. Well, most of it anyways. One person could locate and find all SSI games, another all INFOCOM games, another all ICD software etc... and so forth. There is already a large cartridge file floating around the net that I would like to get my hands on. I also wonder if BEST Electronics has all that good stuff they sell in some database. =)

Oh... to dream...

Karl

Okay.. I have to say this ..but you knocked on Unix and X. Whatever X environment you happen to be running on must be junk. I run X apps all the time and they are very fast. (Yes you have to have a good piece of hardware and video card... but you need that for any real OS anyway). I like X because I can do whatever the hell I want with it. Obviously, you must not have ever used Solaris's OpenWindows (yuck, but damn nice graphical interface) nor have you used the CDE (Common Desktop Environment).

I run FreeBSD with XFree86 on a 486DX2/80. Its fair. Much faster than Windoze 95. Even on very old Sparc2 hardware (under $2000 used) X kicks butt.

Okay... back to Ataris...

You only have a certain # of cpu cycles you can interupt, then it
screws up system housekeeping (I think it tells you in De Re Atari how

much code you use during a DLI)

Taod prices are way to high.. Just look into the computer shopper and
you'll see Intel Pentiums mother boards going for as low as $100.00 366
for $30.00 and all the extras like 16bit sound cards and 1meg PCI video
cards going for $30-$50 buck, Plus ram is at an all time low.. Toad
is not the only ones, theres BEST and B&C Trying to sell 130XE for
$200.00 Anyone that needs an Atari setup should look in Thrift-Shops..
I just passed up a COMPLETE ST system 1040ST with Floppie and ST monitor
for 35.00 and it look brand new..
I know that TOAD buys Atari STUFF By the truckload at dirt prices, I use
to buy the same stuff from Atari in the good old days "Truck Loads"
Toad dose have some good deals on there Lynx games $14-$19 bucks a cart is
fine for a dead system. I probley have more Atari stuff than most ..
:) I also have a Full 8bit LAN system online 24hrs. When I need
parts I just go to a thrift shop and pick up XL or XE for $3.00 each while
there not in the best shape, but all the parts are inside. Atari at
this time is trying to dump truck loads of JAG's packed with 5 games each
for $40.00 a shot.. Hmmm Thats a good price but you must buy a truck
load. The bottom line is I dont need Toad/B&C or any other place to
get my Atari stuff.. Toad on the other hand should sell off all there
Atari stuff At Closeout prices and invest it in somthing that makes
money..

Message-ID: <19961227071000.CAA10590@ladder01.news.aol.com>
Source record: 77483

Atari started to market there home computers to a younger group, Just look at there TV commercials, They also knew that the average person let alone a teenager could ever come up with the money to buy all there software, a person would have to be a millionair! So they burned there stuff in ROM, knowing its a bit harder to copy. Well the PILL and other devices make it a snap to copy the rom to a binary file. So there it is.. But wait a min - even in the 80's software companys knew thare stuff was only good on the market for about 6 months till another program or game surpassed it. Where now in the LATE 90's and Atari is gone. Jack T. took the money and ran.. Hiding Behind the JTS Logo, Im sure theres 300,000 JAG user that would like to get there hands on him, and Im one of them. To me he is a lowlife.. Dummping the JAG so soon and wrecking the hell out of ATARI.

Long Live Atari user's there machine have stood the test of TIME and continue to work. I would still like to see Atari come back with a new owner and re-group . I would love to see this.

Just my 0.2 cents

The point is: Do NOT trust the OS, DOS, or whatever language your are
using to close the IOCB's for you. There may be another (compatible)
version that will NOT automatically close them. The OSS/ICD Action!
runtime file is a prime example. Programs compiled with runtime will NOT
automatically close them on an error, but Jeff Reister's PD Action!
runtime does.

This file contains:
Manual: ZYBEX for ATARI XL/XE
Review: ZYBEX review from ATARI USER, vol. 4 No. 1, May 1988
**************************************************************************
ZYBEX for ATARI XL/XE

Simultaneous two player option L 2.99

Battle on your own or with a friend through the planets of the
Czoken system to your final destination- Zybex. The great
variety of weird and wonderful weapons ensure there are hundreds
of variations on blasting your opponents to oblivion.

Atari Program - Brian Jobling
Game Design - Michael Owens & Kevin Franklin
Graphics - Michael Owens

ATARI LOADING INSTRUCTIONS:

Switch off computer. Hold down OPTION key and switch on
computer.
This game is just too good to believe and is about the best
arcade game you can imagine. Brilliant graphics, superb music
and sound effects, and the kind of slick gamesplay that will
have you itching for just one more go. The story has two rebels,
Rinser and Cassalana, on an almost suicidal mission to escape
the nightmare that is Death Row. To earn a stay of execution
they must penetrate the very heart of many strange worlds and
collect from each a teleport crystal. Each crystal gives access
to another fantastic world until the excited player reaches the
Restricted Levels and the ultimate challenge- Zybex itself. The
last, Zybex crystal, is all-powerful, and will ensure your
captors remove the death rings from your necks. Shoot your way
through the bizarre and colourful aliens and find exotic weapons
whose differing powers are a joy to discover and use. Each
weapon delivers an even more powerful blast as you pick up more
of the same weapon type.
```

CONTROLS:

JOYSTICK
1 ICONS and FIRE select one or two players
2 Run through alternative player colours by pressing FIRE when over man/woman icon
3 Do not engage AUTOFIRE on sophisticated joysticks.
4 S-STARTS game
5 Weapons fire automatically

KEYBOARD
SELECT to PAUSE game
START to restart
Pressing OPTION while game pauses takes you back to the title screen

The game always begins on the first level, Arcturus, and each level sees you start with the Orbit Weapon. This bullet-firing gun begins on Fire Power 1 but can be further developed to deliver a constant stream of missiles when the player has the maximum (2) orbiting defence pods. The other weapons are the 8-way, the Pulse, the Wall, and the Rail Gun. This last can be developed into a long pole which cannot be stopped. All these weapons begin on Fire Power 1 but by picking up weapons of the same type each can have its power increased up to Fire Power 2. Fireballs and asteroids cannot be destroyed. At the end of most levels lies a commandship which is difficult to eliminate. The heads of these craft are vulnerable.
When killed the player looses one Fire Power from the weapon carried at the time and assuming there are some spare lives, a new life has the player invulnerable to collision for a few seconds (while the figure flashes).
Extra lives lie in the floating suits and after every 10,000 points. Bomus points, represented by a large floating B, are added up at the end of each level.

Have you tried SPEED ACE, Zeppelin's super motorcycle racing game by the same author, Brian Jobling?

****
ZYBEX review from ATARI USER, vol. 4 No. 1, May 1988

TWO PLAYER DESTRUCTION

Product : Zybex
Price : L 2.99
Supplier : Zeppelin Games, 28 Osborne Road, Newcastle upon Tyne

NE2 2AJ
Tel. : 091-281 4401

AFTER taking a look at the pre-release version of Zybex in the March 1988 issue of Atari User I was delighted when the finished version arrived. Believe me, it was well worth the wait. The game revolves around the fate of two rebels, Rinser and Cassalana. You control them in their bid to escape death row and execution - and before you think or say anything, not the one in Alcatraz.
To do this you have to undertake an almost suicidal mission to the Czoken System.
Once there you have to visit 16 strange worlds and do battle with wave after wave of alien hordes.
If you survive you will be awarded a teleport crystal which allows you access to other planets in the system.
Eventually you will reach the restricted levels and the ultimate challenge- the Zybex itself.
As well as needing the crystals for access to the other planets you are also governed by how many tokens you have collected.
After completing the initial level it is possible to advance up to level 12 in any order you want without a token, but after that you will need three tokens to get to the restricted areas.
These are awarded after the completion of a level. If you survive and retrieve the Zybex, the death rings- placed around your necks by your captors- will be removed.
To help you on the mission you have been given the Orbit weapon with its lowest power level.
As the mission progresses you can increase the destructive force of the Orbit by picking up debris of the same shape that appears on screen after you have blasted an alien wave.
Many different instruments of destruction can be collected including the Rail Gun, the 8-Way, the Wall and the Pulse.
Extra lives are awarded in the same way- simply fly over the spare man when he appears.
The game has an original shooting system. You have built-in auto-fire which allows you to select any of the weapons you have collected by pressing fire to step through them.
In later stages you can have them all going at once- it was a real pleasure watching aliens explode all over the screen under a hail of laser fire.
Your weapons are displayed in two status screens that sandwich the main playfiels- one on each playfield- one for each player.
Another status line near the bottom of the screen shows lives remaining, score and which weapon you are using.
You can have both players on screen at the same time, and luckily you can't shoot each other.
The play area uses a number of graphics modes with a carefully thought out use of colour and superb scrolling. The alien landscapes for the different planets have been beautifully

designed.
Similar games are often criticised about the design and
animation of the hero and aliens, but Zybex doesn't suffer from
any af these faults.
The animation and design of your player is excellent. His arm
jerks back as he fires his weapons and he swings and tucks his
legs as he thrusts upwards or accelerates.
Every alien wave that attacks you is animated its own way: Some
rotate and others pulse as they zoom across the screen.
The game caters for everything you would ever want. The high
Score table has a dual entry mode- two players with two
joysticks can enter their names at the same time.
All game options are controlled using the joystick- all you need
to do is simply highlight the icon you want on the main screen
and away you go.
One of my favourite features is the music. Several pieces are
used throughout, but the main tune is so catchy I found myself
whistling it all day.
A fine finishing touch to a wonderful shoot-'em-up.

4974. MAC/65 manual + Who wants the BBK manuals?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-27 00:00:00 UTC
From: Richard.Douwes@hcc-lwd.idn.nl
Message-ID: <046_9612270506@idn.nl>
Source record: 77487

Last week I sent the MAC/65 manaul to the manual archive, and this week I saw it had arrived.

With the digest having problems, I missed out on last week's postings here. Since then I use Reference.com to receive this group (have EMail only) and have received all messages since 12/24.

So maybe somebody answered this already, but who can provide me with the missing parts in the manual? I believe it was sections 2.4-2.8 I was missing.

When I was looking through my old Atari disks, I also found the Zybex manual (see my other post) and the great BBK programs from A.N.A.L.O.G. I didn't even remember, but I typed in all the manuals/ articles for these too! Now it all comes back to me. I remember I really liked the idea of a "free" editor, database, ml monitor, copier, spreadsheet and game, including the manuals. I wanted to distribute a disk containing all the programs and manuals for a nominal fee. Only one problem: nobody wanted them. Maybe this is my second chance. Anybody want it? Maybe I should upload them to the manual site. Should I also include the UUEncoded program files then?

What about the complete source code for Speedscript? (Even edited out a few mistakes!).

Schreurs brothers: Do you want them on your next CD?

While I'm at it: Is there anybody in the Netherlands who can sell me a disk drive or SIO2PC cable?

When will the digest be back?

What's the meaning of life?

Thank you.

I'm really pleased that the games I wrote for the Atari800 are seeing
the light of day again on these emulators and I'd encourage other
Atari800 authors to put up there old games. The thing I object to is
wankers like "Yogi" hacking my games and replacing the "Written by Adam
Billyard" in the game with his own name. Its such shitty thing to do.
Credit where credits due and all.

Adam

One very noticeable ommission to your Atari BBS List is probably the oldest Atari 8-Bit BBS in existance, ACE Of America, run by me, The Shadow, and owner of Shadow Software, and the support BBS for the Carina BBS System as well as all other Shadow Software.

Located in Portland, Oregon, phone (503)-761-9074

Not only do we still support the 8-bit, but we also are continually writing new programs for it!

The Shadow

4977. Game screen shots (12/27/96)

Cross-posted to: rec.games.video.nintendo,rec.games.video.sega,rec.games.video.3do,comp.sys.cbm,comp.sys.atari.8bit,rec.games.video.atari,rec.games.video.sony,rec.games.video.cd-i,rec.games.video.classic

I have just added 180 new game screen shots for the Sega Saturn, NES, and SMS to my WWW site. This brings the total number of ORIGINAL screen shots on-line to 1375, for the following systems:

Atari 2600, Atari 5200, Atari 7800, Colecovision, Mattel Intellivision, Magnavox Odyssey2, Emerson Arcadia 2001, Bally Astrocade, Atari 8-bit computer, Commodore 64 computer, Commodore Vic-20 computer, Tomy Tutor computer, 3DO, Sony Playstation, SMS, NES, SNES, TurboGrafx-16 / TG CD / Duo, Sega Genesis, Nintendo 64, Sega Saturn, Atari Jaguar, Philips CD-i, and Game Boy.

More will be added as I have time. Eventually, I will have my entire collection on-line (hopefully before the turn of the century :)

The Sega CD / Sega 32X are probably next in line (I've had a few problems getting clear 32X pictures).

If this is of interest to you, the URL is listed in my sig.

> touched.)

Well, this is a bit problematic. My suggestion was based on the (sometimes flawed) premise that the software items they sell wouldn't be available anywhere else. Unfortunately, it would be hard to determine whether any particular item is still available anywhere before doing this. I'd agree that in an ideal world, those who still have the original items for sale, new, should be able to sell them first before some scheme like this kicks in.

> Price? $20 each. Not, bad. Not great either, since I purchased the exact
> same set a few years ago for $12 each. Since I have finally gotten back in
> touch with the software/hardware vendors that I used years ago, I am planning
> on purchasing more software.

Well, I'd imagine that only the more popular titles (or ones with several disks) would sell as high as $20. I'd imagine that $10-15 would usually be the target price. I recently bought stuff from American Technavision for $3-5 each; depending on the deal one could make with the vendors, it might not be much more than $8-10. (About a year ago, maybe a little more, they had each title of the AR series for $5 each, if I recall correctly.)

> At the same time, I also want to download all the pirated stuff. Will I?
> Maybe. Will I purchase the software new as well? You bet. I'm a collector
> so, NIB is very nice. =) I own 4 legal copies of the AR series, but I play
> the pirated versions so as not to destroy my originals.

This is understandable. If I could copy my copy-protected floppies, I'd do the same thing. I'd probably make two backups of everything I have, use one of them on a regular basis, and store the others away for safe keeping. I might even take the original disks and, where possible, tuck them in their original boxes.

> If after trying to locate a source for a particular piece of software, and
> I can't find it. I probably will try to obtain a pirated copy. ONLY in this
> case do I feel pirating is acceptable. However, as soon as a source comes up

That's exactly how I feel, and it's why I'd like to see other legitimate
sources made available and easily accessible--that would completely
wipe out the "piracy is acceptable" arguments.

> Also, me in my dreaming state want to know if anybody has the desire to

> sell in some database. =)

That would be nice. Then, at a glance, you could see whether one could
buy something new from a reputable source. That would certainly
help some who want to do the right thing have every chance to do things
the right way before copying that floppy.

The only problem using email in Free Agent is that you *CANNOT* (at
least to my knowledge) recieve mail. IE, while buggy, can render most
Netscape enhanced pages equal or better then Netscape. I just wish IE
3.0 for Windows 3.11 had Java support. Currently, it only has
JavaScript (just like NN 3.0 for Win 3.1)

If you can find a drive with the Archiver chip, make sure it comes with
the Archiver or Archiver/Editor software. It is required to use the chip.
I've had an 810 with the Archiver chip for about 15 years and it's
wonderful (no, I'm not willing to sell it 8+)). If you do get a legal
copy of the software and need a copy of the manual, let me know.

From: mclane@dellos.demon.co.uk
Message-ID: <32c51d97.723470@news.demon.co.uk>
Source record: 77497

Any able to offer some help here please..I hope so :-))

Been using Ape under MsDos mode for a while and it works a dream but I only had 1 9pin comm port till today when I went mad and added another one....So I saved myself the hassle of unplugging the mouse in comm 1 so I could put the Ape lead in...
That was great, no more lead swapping Ape in comm3 and mouse comm1 and all working fine...

So now I think (big mistake) that the long file name support in Ape under win 95 would be ideal as most of Yogi`s atr etc are long names that truncated for win95. A few mins later the add new hardware proggy has found my new comms ports and its looking good...I open a dos prompt and do what Steven says in the Doc re the Idle setting for the window and make it full screen. Ape runs no probs BUT it will not recognise it as having a drive when booting an image..I have checked the settings and they are the same as before, I have checked for conflicts in the device manager but the Atari just boots like there isn`t a drive...

Any Ideas...It all works if rebooted to MSDOS mode or from the F8 command line only option but not from a Dos prompt window..
Running on a P133 with 24megs mem...

Help....

Atari BBS List 12/27/96

Maintained by _/InfoMan_ <infoman@poboxes.com>

Please keep me informed with updates to the list and I'll post revisions
as necessary. In particular, if one of the BBS's is within your local
calling area, please give them a call and let me know whether they're
currently operational.

All boards are assumed to be operational 24 hours a day, 7 days
a week unless otherwise noted.

The format of the individual entries is below.
Note that each entry uses at least five lines (all of which are
less than 40-columns in order to make this easily 8bit readable):
"Type" indicates the type of hardware used to run the board.
"Status" is whether the board was up or not the last time it was checked.
"Status Date" tells you when the entry was last updated.
--
There can be one or more lines of "Notes".

An asterisk (*) next to the board's phone number indicates that entry has
been updated since the last version of this list.

> charged $1 or $2, I'm not sure there'd be enough demand to justify it.

Well, it would first and foremost have to be a labor of love. There clearly isn't a lot of money in it for *anyone*. But I've been the beneficiary of so much generous goodwill in c.s.a.8 (the community really seems to help each other out a lot) that I don't doubt that a lot of people would be willing to form a "co-op" given the right organization (or lack thereof!) and the ability to quickly and cheaply obtain that missing software title they've wanted for the last 8 years.

And the price would obviously depend on the title and the deal one could cut with the copyright owner. Maybe they'd give away the rights, assuming those who took the license made no profit on the distributions. (Before you call me a idealistic Utopian, this is *exactly* what happened to the Vectrex software, so there *is* a precedent.)

But if you assume that most vendors would want at least $1-2 for each copy sold, if you have a mostly volunteer and non-profit orientation to the project, the software could be made available for $5. And if this is a roughly break-even, non-profit (or small profit) setup, you wouldn't really *want* a high demand--it takes too long! But you would perform a great service for a hard-core nucleus of us die-hards who have (like me) an 800XL next to his Power Mac 7200.

Companies want to control their markets as best they can and controlling
Atari programmers was the best way to do it. IBM also wanted to control
their market, but tried to do so at a hardware level. Both companies
failed miserably..... For Atari, it meant death. For IBM, it spawned a
huge industry (just not theirs...). No nice guyz ever ran a billion
dollar company.

Bob

Friendly to the user, yes, but not the programmer.

Reading the parts of the Reference Manual that are currently on the Web, I noticed how incomplete it was when compared to the Commodore manual, which gave complete hardware register information.

The memory map on the Commodore programmer's reference manual was littered with things like (Bits 5-7: X offset) and (0=LOAD, 1=VERIFY). It even had a reasonably complete description of the 6502 instruction set, and walked a user through a few simple machine language concepts like branching and indexing. This kind of thing was also seen in the Vic-20 manual.

>Whats your take on this? I was very disturbed when I read this. I love
>my Atari, but I really liked thinking it was a cool company. It really
>ruined my evening.

Atari thought, well, if we make all the GOOD stuff, WE make all the money, not THEM. The personal computer industry was, what, three years old when they offered the 400 and 800. They decided to try something. They shouldn't have tried it.

Whilst reading the usual rubbish I find here, Nick S Bensema wrote something
interesting to All about Coding oddity. HELP!:

Hello Nick,

>> You only have a certain # of cpu cycles you can interupt, then it screws
>> up system housekeeping (I think it tells you in De Re Atari how much code
>> you use during a DLI)
NSB> What does that mean? Does that mean if I interrupt more than X-amount
NSB> of raster lines, my program will screw up without fail, or can I only

Basically, yes. If DLI's get too big, then system timings start getting thrown
off. Obviously the Atari (or emulator, for that matter) objects to system
critical timing being mucked up like this, and wont let it happen.

NSB> use one DLI?

No, you /can/ use more than one, but the overall length of DLI's time-wise
can't exceed a certain amount. Hence the reference to De Re, above.

I have both of these. If you mail me postage I will be happy to make
photocopies of both of these manauls. I think 3 bucks for each should
cover it.

Reply only to Eric_Cron@addus.com

Let me know if youre interested.

4992. The book "Hackers" and Atari

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-28 00:00:00 UTC
From: Eric_Cron@addus.com
Message-ID: <5a1p1h$7b3@kirin.wwa.com>
Source record: 77505

I have been reading this book called Hackers. It really says a lot about the Atari.

It says that some dude named John Harris who wrote a "copy" of Pacman way back when was really hassled by Atari. He also said that Atari wouldn't give him any information when he was trying to learn how to program it. For example, Atari people told him you could only get four colors on a screen, and he knew you could get more because Atari was marketing products that cleary had 8 or more.

Basically, it said that Atari was a really nasty company, even though it had a great machine. It went on to say that they treated their programmers really nasty. Evidentally, they wanted to keep all of the secrets to the Atari to themselves. They didn't want other companies to compete with their software division????

I find this very hard to believe, since the users of the Atari seem to be the most friendly of any computer.

Whats your take on this? I was very disturbed when I read this. I love my Atari, but I really liked thinking it was a cool company. It really ruined my evening.

one other note, Ken Williams of Sierra On-Line evidentally set up an Atari running a copy of Frogger at some trade show and passed it off as an Apple. I guess a lot of people got pissed when they bought their copy for the Apple and it really sucked.

Would love to see some talk about this. Anybody else read this book?

I dont have the time nor the inclination to do either.
Nor the disk editor with the hex mask. I no longer have a copy of
Diskey to do so, and If you think I want to do hex math in my head to
figure out where to change it, you're crazier than I am.

It's unfortunate that this has happened, but you see, in the
particular game that Mr. Billyard is complaining about (Chop Suey) I
received a cracked boot disk of it that had ALREADY had the text
changed to say "from the Cocaine BBS and the NOSE". So changing it to
something else was no big deal on the file version.

What I used to do for my personal archive in the 80's was to keep a
copy that NOTHING was changed on, and one that got distributed.
Unfortunately, the person who ended up with the disks bulk erased all
those versions, so they're gone forever. Besides, after I figured out
how to make Gr. 7 mode title screens I never changed any more text.

So there...........

Funny how the "archivists" say they don't feel like they are committing piracy, but then change the names of the authors within the games... like the pirates did in the past. If they really felt like they were "preserving" the games, then they should stop hacking their names into them.

If it looks like a rose,
and smells like a rose ...

I forget about Free Agent... are you sure it can't do e-mail? If not
then consider MS Exchange or Windows messaging, or buy Agent, or try
Pegusus Mail.

As to IE rendering pages that are enhanced with Netscape SPECIFIC
extensions equal to or better than Netscape... you are on drugs. :)
Netscape enhanced pages LOOK BEST WITH NETSCAPE. IE enhanced pages
LOOK BEST WITH IE. Most pages are not enhanced with browser specific
extensions at all, but of the ones that are, NETSCAPE enhanced pages
FAR OUTNUMBER IE ones.

Are you still using Win 3.x?

Cheers,

Jon

Another thought is that the files must be printed in ATASCII not mere
ASCII. His cousin will quickly become hopelessly disappointed if he
tries to enter in from a listing in ASCII. Most Atari BASIC programs
use special characters in the source, and these will not convert to
ASCII correctly. Just a thought. :)

> The Doctor

That is essentially what the floating point package in the toolkit does. The reason it is clumsy to use in programming, is because there is no native floating point type in action. All references to FP type variables have to be done a little surreptitiously. It is doable though.

Cheers,

Jon

Has anyone considered that those might be used copies that CSS is selling? If so, they are not pirating. Ownership of a product can transfer. It wasn't until much later in the software copyrighting game that there were user licenses instead of ownership of a particular copy. In other words, back in the time of OSS products, when you bought a program, you OWNED that copy of the program and could re-sell it. Now-a-days, you simply purchase the rights to USE a program generally. I am no expert at copyright law, and am unsure of the validity of what I just wrote. I do believe it to be at least somewhat correct however. Comments Bill or Robert (or anyone else)?

Cheers,

Jon

I disagree. It is good form to program this step anyway. While it is technically unnecessary, it IS necessary for good programming habit and code maintenance. Most all people who program a lot for a long time learn the value of that.

>: 20 open #1,4,0,"file1.ext"

It should be left in for good form.

```
>: 110 error=0:status #1,error
>
>Why are you storing a value in to "ERROR" when the STATUS command will
>obliterate it several jiffies later.
```

Perhaps to make sure that it isn't an old error code left over?
Does the STATUS routine merely return the value in that system
variable or does it also force that variable to be set to some code
whether there is an error or not?

Cheers,

Jon

: >Whats the best assembler for the Atari 8 bit?
:
: Well, I use SynAssembler myself.
: Don't see or read much about this nice Assembler in the newsgroups
: though, but it is still my favourite Assembler.

the synassembler was *great*.

my roommate and i wrote a super development setup. it consisted of
a device driver we could write an object file to (R:) that drove a
parallel port hooked up to a slave machine, which received and ran the
executable. the slave was free to crash; the master machine almost
never did.

i wrote an emacs-like editor that patched out one of the less useful
synassembler commands. [in my naive youth, i wondered why synapse
software didn't want to buy it from me. :-) if hehore wolosenko is
out there somewhere: i understand now...!]

god, the synasm setup was fast. being able to do an "edit and try
again" in five seconds or so is something i've not enjoyed again until
recently, and it makes a real difference.

5008. Yogi's site

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-28 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5a2u7d$fpc@login.freenet.columbus.oh.us>
Source record: 77571

I was up on the new site for Yogi's FTP site (www.blast.net).
It's super hard to connect to with Lynx since it keeps loging in and out everytime you do anything.(Yogi's site has a limit of 5 users)
I saw a new site,but all the boot disks are kept in "ATR" files instead of DCM files.

How can I access the ATR files on a 800?
I know of a CTB (compiled TurboBASIC) programme,but that's useless without the TUR (BAS?) files to use with TurboBASIC 3.2q.
(TurboBASIC for SpartaDOS.I assume it will also work with MyDOS)

Also,the ATR files seem to be as big as the actual disk they contain.So a single density disk ATR is 90k.It seems to me that you could only download these ATR files if you have a better drive than the one they are for.
You need a 1050 to download the 90k files and a double density drive (like the XF551) to download the (few) 130k files.Am I right about this.

Why not use DCMs in ARC files?
Much more compact,and you don't have to worry about garbage at the end of the files.(because of X-modem)

And the COM/OBJ files are kept in HUGE ZIPs!
Even if these ZIPs used a compression method compatible with Atari's ZIP,they're too huge for anyone to download!

Why aren't these being kept in seperate ARC files instead of dozens of COM files being stored in ZIP files?

IT's useless clutter,if you ask me.Even if it's as that chap said,that
some BASICs don't close channels on "RUN",you would simply get a error if
you tried to open a already opened channel,not coruption.This is a
artefact of the OS,not the particular handler(read "DOS") you are using.

Actually,STATUS doesn't seem to work this way.You'll have to use BASIC's
memory location that stored the number of the error.
(I forget it at the moment)

: Agreed. It is better to verify that the error is in fact the
one : expected rather than assume it.

It more useless than a REM statement.What good is form if it's meaningless?

: >: 110 error=0:status #1,error
: >
: >Why are you storing a value in to "ERROR" when the STATUS command will
: >obliterate it several jiffies later.

: Perhaps to make sure that it isn't an old error code left over?
: Does the STATUS routine merely return the value in that system
: variable or does it also force that variable to be set to some code
: whether there is an error or not?

It returns whatever the handler says.Normally a 1 or some other
non-negative number (read "above 127").A number with the high bit set (and
hence "negative") indicates a error.But the DOS handler doesn't seem to
suport the STATUS command except after a OPEN to determine it's success.
It meant to be used in a XIO statement.
XIO 13,#3,0,0,"D:FILENAME.EXT".
Since the CIO opens a files to get it's STATUS (and to perform a XIO) if
the IOCB# refers to a closed IOCB,this will give you a 1 if the file
exists and is un-locked,167 if the file is locked,170 if the file is
missing,and any other error number returned by the handler if DOS could
not find/access the file.

(note:of course the "XIO" BASIC command is in fact being used here to
perform a CIO call,not a actual XIO call)

In sumary,DOS only lets you get the STATUS after you've opened a file.But
BASIC would abort or trigger the TRAP line if there was a error (except if
the file was merely locked and you weren't trying to open a write channel)
The XIO13 works because the CIO opens the file for you.

I think that DOS merely looks in the buffer for a filename rather than
simply returning the status of the last open.Since the buffer pointer
would simply be pointing the the string at the end of the BASIC OPEN
statement,you can use STATUS after OPEN.But after PUTs and GETs,the buffer
pointer would just point towards random data (random to DOS),so you get
error 170s and 165s.(file not found and bad filename)

I've had SpartaDOS X create files because of BASIC's STATUS command.

I think that DOS 3 fixed this problem.I'll have to find my manual.

: time and they are very fast. (Yes you have to have a good piece of hardware
: and video card... but you need that for any real OS anyway). I like X
: because I can do whatever the hell I want with it. Obviously, you must not
: have ever used Solaris's OpenWindows (yuck, but damn nice graphical interface
:) nor have you used the CDE (Common Desktop Environment).

If only all UNICES were like Linux.

I know that the PC's video is really simplistic.The only feature I can
think of is smooth scrolling,but I don't know anything about that.
(PCs don't even have player/missle graphics)
But must a wire frame game (which wouldn't even use any of those features
except double buffering) run like it's on a 1mhz machine?!?

In case you others have never seen X-tank,it like Mercenary in the 3D graphics department.

: I run FreeBSD with XFree86 on a 486DX2/80. Its fair. Much faster than
: Windoze 95. Even on very old Sparc2 hardware (under $2000 used) X kicks
: butt.

I really don't want to buy such a overly powered machine to play the equivilant of BattleZone!

Even the author of Xasteroids agrees with me.He gave up on X and now uses the shared VGA libraries of Linux.He said that Xasteroids was so slow because of X it self!
There was nothing he could do,most of the user-time of his game was being spent in X!

For those of you not UNIX inclined,that means that no matter how fast he made his game,it'd still run slow because X takes so long to do anything!

: Okay... back to Ataris...

Funny you should say that,my Atari 800XL is running Flight Simulator 2,and it's as fast as Xtank.On my 80386 40mhz!!!

5012. FS: Atari Computer Goods! FREE Catalogs! More Atari Stock!

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-28 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <5a315csej1@nadine.teleport.com>
Source record: 77575
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff like MULE and Archon for the Classic Atari 8 Bit and for you Collectors with an appetite for Ultima. BRAND NEW, UNOPENED original copies of Ultima V.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking. And something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, Local to Portland, Oregon. U.S.A. at (503)256-9974.

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.
--
Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974.
DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

: > Man,Bob must've had a crappier P:R:C than me.
: > He seems to be somewhat naive about ICD products.I always thought of ICD
: > and Bob Puff's stuff as being on opposite sides.

: I had a P:R:C for a while until I got my MI/O. Best move I ever made
: for my 8-bit.
: Actually, Bob Puff designed his own hardware, while ICD used the specs
: forr the 1090 expansion box.
: If I could have afforded a Black Box, I would have bought one of them
: instead. As it was I bought the MI/O (256K) used for $80. at the time.
: That was a great price then, since MI/Os were still being produced by
: ICD.

: > He didn't seem to know why SpartaDOS ended up writing to the wrong floppy
: > when you swapped disks while the file was still open.
: > (I read this in the docs for SuperARC/UNARC)

: You're not talking about me. I never had this problem. I've written
: some rather complex, disk intensive BASIC XE programs that used
: extensive file management (SDX version of NOTE and POINT). I never had
: the time to learn MAC/65. I wish I had, but that's another story.

I was talking about Bob Puff,of CSS.SpartaDOS doesn't have file buffers
(nor drive buffers) like AtariDOS/MyDOS.The buffers get dynamicly assigned
to a file's use.If you swap disks while a write-opened file has had data
writen to it (this data is still in the buffers until you close the file)
and then put in another disk and starting reading another files (like what
might be done in a copy operation),SpartaDOS X will start looking for
buffers for the read-opened file.So it'll start flushing the buffers of
the write-opened file,which of course will cause the data to be writen to
the wrong disk.The solution,always close write-opened files before you ask
the user to swap disks.

: Anyway, this topic has been replied to on numerous occasions and I
: guess the 'who wrote what' has gotten foggy. I replied to the original
: guy (I forget who that was now) about file x-fers using a null modem and
: a couple of comm programs. I don't know where all this other stuff came
: from.

: >
: > My P:R:C goes at 9600.In fact,I used it to post my GTIATEXT.BAS message.
: >
: > You may be thinking of one of those graphical text term programmes.

: > --
: > The Doctor

: I still have to try out the GTIATEXT.BAS program you wrote. Looks
: interesting.

It's not much,just shows off a new text mode.

For those who don't know,many games use text modes.Forgotten Island and
Crypt of The Undead are two examples.These are BASIC games,so they are
slow.Text mode means 1/8 the data to move.The CGS system (it WAS available
from Closser To Home BBS,dunno now),which I have never tried,also seems to
use text mode.This is important since modems can only carry so much data
at a time.Sending graphical data would simply be tooo slow.

In case this is confusing,you can alter what "set of characters" the Atari
uses.When you do this,you have the same restrictions as graphics in GR.8.
That how you get colours in GR.0 games.My GTIATEXT programme uses a GR.11
aproach.Might be useful in BBS and BASIC programmes.

There really needs to be a modem protocol that not only lets the BBS
programme define new character sets,but to also set graphic modes.
(and to mix GTIA modes with CTIA modes like GTIATEXT does)
And to control P/M graphics and smooth scrolling and display lists...

: >
: >SAVE "D:PROGRAM.BAS", in an attempt to save a basic program,I get an
: >error 130. I would be most obliged if you could enlighten me.
: >

: Ok, to get it working you need to have a DOS virtual disk as D1. This
: means that when you start the emulator, you must add a reference on
: the command line to an ATR image file.

: for example: (this should work with any emu you have)

: ATARI DOSDISK.ATR (this is for XLit)
: XF25 DOSDISK.ATR (PC Xformer)

: Once you have started the emulator, it should be in basic- but there
: will be a slight pause while DOS loads. If you want to check that DOS
: is actually loaded, type DOS at the basic prompt, and that should take
: you to the DOS MENU. You can then press "B" (run cartridge) to return
: to basic. Hope this helps........

But remember:typing "DOS" erases you programme.(except sometimes in MyDOS)
Before you type any programmes in,goto DOS and use the "N" command.
This will activate the MEM.SAV feature which will save part of your BASIC
programme before the DOS menu ("DUP.SYS") loads up,and re-loads that part
when you go back to BASIC.

But if you load a game or something from the menu before you go back this
will probably overwrite your BASIC programme.Some copy operations also
corupt memory.

The trouble, Ziggy, is that anyone who tried to obtain the rights to do this in the past was greeted by the absence or stone silence of the copyright holders. Many can't or won't be located unless there is a rather significant buck in it for them. Meanwhile, if the "middleman" has announced his intentions to the community involved, be it Atari or Apple or Commodore, he is hounded from that side for progress reports.

It's been a thankless task, so far, by all reports I've heard. As Jon Mordosky pointed out, new legislation may make it even more difficult.

None of that means, "don't try," but be prepared for a frustrating time.

Whelp, since the subject is C and Atari 8-bit...

Why not:

```
#define REALLY_BIG 6000

main() $(

FILE *in, *out;
int error;
char buffer[REALLY_BIG]

in = fopen("filename.one","r");
out = fopen("filename.two","w");
error = fread(buffer, REALLY_BIG, 1, in);
if (error > 0) /* Then it's the actual size */
$(
error = fwrite(buffer,error,1,out);
if (error <= 0) printf("Error %u",error);
$)
else printf("Error %u while reading",error);
fclose(in);
fclose(out);
$)
```

CC65 is the coolest....

Read the history books. Atari was in trouble long before JT. In fact, it
was in trouble in some ways when Warner picked it up from Nolan Bushnell,
and Warner compounded the problem by not knowing anything about computers
and being unwilling to learn. In fact, Nolan advised Warner to stick to
game machines, which they didn't do. JT and his guys merely added to the
problems, but I think they made an honest effort to keep the computer end
afloat. By the time the Jag hit, there was no money to market it
successfully.

I read the book a while ago, so my memory is really foggy. Did the John Harris incident and the Sierra thing happen during the Bushnell ownership, or was Warner in control? If it was Warner, it would seem to make sense. Those guys seemed to know nothing about computers or how to market them.

I also seem to recall a courtroom scene in the book where Ataris lawyers were questioning some game programmer about his flowcharts and source code, and he just laughed at them and said he wrote the entire program in question off the top of his head. The lawyers were dumbfounded. Can anyone fill in the details on that one?

The book sounds interesting, its called HACKERS??? and who is the publisher and if possible, whats the ISBN???

I think that perhaps since one pogrammer complained that doesn't represent all of them, for example about 10 years ago there was a Compuserve roundtable where they interviewed some of the programmers from Activision and these were all former Atari employees who started Activision, they said they had it great, free food and soda (gotta keep that sugar rush going!!!) coaches to sleep on, arcade machines to play and other assorted perks, they said the only thing that miffed them and made them leave was that Atari would never allow them to place their names or initials in the games and their names were not mentioned anywhere on the boxes or instructions, they just wanted to be acknowledged for their work. Thats why on any Activision product you see all the programmers and names. From all the people in Atari (whether is INC or CORP) they loved it.

>give him any information when he was trying to learn how to program it.

Look at the key word there - Atari wouldn't GIVE him any info. Atari sold the documentation for the 8 bit at very reasonable prices. The hardware manual (with full register specs contrary to what the Commo fan wrote), De Re Atari which was filled with wonderful ideas about what the special hardware put into the machine could do (always use this book when looking for a new programming project.), the source for the OS and the basic compiler. These manuals ranged in price from about $15 to $25 (I paid $50 for the hardware manual and the OS source book.)

I chose the Atari 800 for two reasons - the full availability of specs -hardware and software - and the fact that the Atari had a true OS - one where you could change anything you wanted because all OS software was linked through table vectors in ram that you could change. No other OS had these capabilities. The Atari was a software hacker's dream come true. And yes, they did not give the info away but sold it at reasonable prices.

rest of whining deleted. Wayne

From what I recall you have alot of time, however if you set up a DLI to occur before a previous one is finished you could have a problem.

I would be sure to double check the registers you are pushing and poping, also be sure you are not changing memory that the mainline code is useing.

I was starting to wonder. Some of my previous posts I made from
this address never made it. ALL of my posts from my 'pay'
provider never made it. And they supposedly improved it.

The problem is simply WINDOWS 95!! I don't have WIN 95 myself, but
after repeated attempts to connect the game Command & Conquer with my
brother (who IS using WIN 95) over a modem, we found that for some
reason WIN 95 is NOT fully releasing the COM port to the program that
wants to use it. After booting like you say using the F8 menu, we had
no trouble whatsoever. I think the only solution is to use the F8 menu
option whenever you need APE. Unless some WIN95 user/freak/anyone???
has some info on freeing the COM port fully. Sorry this wasn't much
help. but just letting you know your not alone in your fight against
WIN 95!!! :)

Steve

Well, for a start an ATR file is actually a full DISK written in a
format that can be "booted" either using the SIO2PC cable (for which
you need a PC to connect the ATARI to, and run software on the PC to
emulate an ATARI disk drive), or any of the current ATARI emulators
use the ATR on the command line as a virtual DISK.
The reason for placing COM and EXE files into a ZIP format, is that
many ATARI users actually use their PC to download the files, extract
and then port the COM/EXE files directly to an ATARI disk, or disk
image. Of course if you only have an ATARI computer, well, methinks
time to get a PC. It's just so much easier to use the PC as a medium
for the ATARI. As you have stated- the ATARI computer doesn't have the
disk space to download HUGE ATR and ZIP files, and work with them very
easily. The only way to get the ATR files I think would be to get

someone to convert them to DCM format. Then the ATARI could work with it, of course if you have at least a Doubled 1050 drive. As for ZIP files, Good Luck... I haven't heard of a ZIP utility for the ATARI.

Steve.

Delta publishes it. Any good bookstore can order it for you--there was a
reprint a couple of years ago.

: I think that perhaps since one pogrammer complained that doesn't
: represent all of them, for example about 10 years ago there was a
: Compuserve roundtable where they interviewed some of the programmers from
: Activision and these were all former Atari employees who started
: Activision, they said they had it great, free food and soda (gotta keep
: that sugar rush going!!!) coaches to sleep on, arcade machines to play and
: other assorted perks, they said the only thing that miffed them and made
: them leave was that Atari would never allow them to place their names or
: initials in the games and their names were not mentioned anywhere on the
: boxes or instructions, they just wanted to be acknowledged for their work.

John Harris didn't work FOR Atari. Nobody from Atari complains in the
book, but Atari had bought up the rights to a bunch of arcade conversions,
and when guys like Harris started making games that were better than
Atarisoft offerings that looked an awful lot like the same game, Atari got
pissed.

On the plus...yes its good to see the old programs getting permission
from the programmers like yourself. I remember when you brought a half
finished version of Bellum into my shop in Hammmersmith (Maplin) and
showed me it..So to see it rise again with your nod is pleasing..

> The thing I object to is-wankers like "Yogi" hacking my games and

>
If you want Adam, you can have a genuine untouched copy (ie real) of
electraglide but calling Yogi a wanker because a copy of your software
was modified many moons ago is a little over the top IMHO...
The game is still intact and can still be enjoyed, thats the crux of
the matter..

>>Just that "wanker"
>>Yogi
>
Keep the archive going....:-)

>Yeah, how ingracious. But if you deleted his name you should put it
>back.
>
>Daniel Clinton
>

Daniel, in the old days it was a fun thing to do, getting diskey out and playing around with the ingame text. It was never a dig or comment at the programmers prowess. The fact that it was on a cracked copy makes it even less of a argument point...

Yes, quite alot of us DID crack games and mess about with the loaders to show our "talent" as a hacker but unless the interest is kept alive by people like Yogi, James King and any one else who still loves the old 8 bit it is not going to matter one little bit about names in loaders....

BTW Yogi...Do you want Diskey back for the Archive?

: You need a 1050 to download the 90k files and a double density drive (like
: the XF551) to download the (few) 130k files.Am I right about this.

ATR files are just raw disk images, with an extra 16-byte header tacked on at the front. (XFD files are the same files without the header; in other words, pure disk images.)

The 1050 can actually handle both the 90k and 128k disks, but that still doesn't make it any easier to download the files.

One solution is to use something like APE, and daisy-chain it with a regular 1050. Copying disks or files this way works very nicely.

There's another cable that connects the PC to the Atari's joystick port, allowing you to copy disks between the two. The advantage of this one is that it requires less hardware than the SIO2PC/APE cable (it's just a bundle of five wires). The disadvantage is that it's quite slow (about 6 minutes to transfer a 90k disk). (As a substitute for the Xformer cable, which I could never get working, it was wonderful.)

If you need any info, ask away...

: Well, I use SynAssembler myself.
: Don't see or read much about this nice Assembler in the newsgroups
: though, but it is still my favourite Assembler.

the synassembler was *great*.

my roommate and i wrote a super development setup. it consisted of
a device driver we could write an object file to (R:) that drove a
parallel port hooked up to a slave machine, which received and ran the
executable. the slave was free to crash; the master machine almost
never did.

i wrote an emacs-like editor that patched out one of the less useful
synassembler commands. [in my naive youth, i wondered why synapse
software didn't want to buy it from me. :-) if hehore wolosenko is
out there somewhere: i understand now...!]

god, the synasm setup was fast. being able to do an "edit and try
again" in five seconds or so is something i've not enjoyed again until
recently, and it makes a real difference.

Whilst reading the usual rubbish I find here, Nick S Bensema wrote something
interesting to All about Coding oddity. HELP!:

Hello Nick,

>> You only have a certain # of cpu cycles you can interupt, then it screws
>> up system housekeeping (I think it tells you in De Re Atari how much code
>> you use during a DLI)
NSB> What does that mean? Does that mean if I interrupt more than X-amount
NSB> of raster lines, my program will screw up without fail, or can I only

Basically, yes. If DLI's get too big, then system timings start getting thrown
off. Obviously the Atari (or emulator, for that matter) objects to system
critical timing being mucked up like this, and wont let it happen.

NSB> use one DLI?

No, you /can/ use more than one, but the overall length of DLI's time-wise
can't exceed a certain amount. Hence the reference to De Re, above.

5040. Yogi's site

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-28 00:00:00 UTC
From: dklugh@freenet.columbus.oh.us
Message-ID: <5a4b5e$5b2@nr1.vancouver.istar.net>
Source record: 77603

I was up on the new site for Yogi's FTP site (www.blast.net).
It's super hard to connect to with Lynx since it keeps loging in and out everytime you do anything.(Yogi's site has a limit of 5 users)
I saw a new site,but all the boot disks are kept in "ATR" files instead of DCM files.

How can I access the ATR files on a 800?
I know of a CTB (compiled TurboBASIC) programme,but that's useless without the TUR (BAS?) files to use with TurboBASIC 3.2q.
(TurboBASIC for SpartaDOS.I assume it will also work with MyDOS)

Also,the ATR files seem to be as big as the actual disk they contain.So a single density disk ATR is 90k.It seems to me that you could only download these ATR files if you have a better drive than the one they are for.
You need a 1050 to download the 90k files and a double density drive (like the XF551) to download the (few) 130k files.Am I right about this.

Why not use DCMs in ARC files?
Much more compact,and you don't have to worry about garbage at the end of the files.(because of X-modem)

And the COM/OBJ files are kept in HUGE ZIPs!
Even if these ZIPs used a compression method compatible with Atari's ZIP,they're too huge for anyone to download!

Why aren't these being kept in seperate ARC files instead of dozens of COM files being stored in ZIP files?

: I disagree. It is good form to program this step anyway. While it is
: technically unnecessary, it IS necessary for good programming habit
: and code maintenance. Most all people who program a lot for a long
: time learn the value of that.

IT's useless clutter,if you ask me.Even if it's as that chap said,that
some BASICs don't close channels on "RUN",you would simply get a error if
you tried to open a already opened channel,not coruption.This is a
artefact of the OS,not the particular handler(read "DOS") you are using.

: >:
: >: 10 close #1:close #2
: >
: >line#10 could be omited for above stated reasons.

: It should be left in for good form.

It more useless than a REM statement.What good is form if it's meaningless?

: >: 110 error=0:status #1,error
: >
: >Why are you storing a value in to "ERROR" when the STATUS command will
: >obliterate it several jiffies later.

: Perhaps to make sure that it isn't an old error code left over?
: Does the STATUS routine merely return the value in that system
: variable or does it also force that variable to be set to some code
: whether there is an error or not?

It returns whatever the handler says.Normally a 1 or some other
non-negative number (read "above 127").A number with the high bit set (and
hence "negative") indicates a error.But the DOS handler doesn't seem to
suport the STATUS command except after a OPEN to determine it's success.
It meant to be used in a XIO statement.
XIO 13,#3,0,0,"D:FILENAME.EXT".
Since the CIO opens a files to get it's STATUS (and to perform a XIO) if
the IOCB# refers to a closed IOCB,this will give you a 1 if the file
exists and is un-locked,167 if the file is locked,170 if the file is
missing,and any other error number returned by the handler if DOS could
not find/access the file.

(note:of course the "XIO" BASIC command is in fact being used here to
perform a CIO call,not a actual XIO call)

In sumary,DOS only lets you get the STATUS after you've opened a file.But
BASIC would abort or trigger the TRAP line if there was a error (except if
the file was merely locked and you weren't trying to open a write channel)
The XIO13 works because the CIO opens the file for you.

I think that DOS merely looks in the buffer for a filename rather than
simply returning the status of the last open.Since the buffer pointer
would simply be pointing the the string at the end of the BASIC OPEN
statement,you can use STATUS after OPEN.But after PUTs and GETs,the buffer
pointer would just point towards random data (random to DOS),so you get
error 170s and 165s.(file not found and bad filename)

I've had SpartaDOS X create files because of BASIC's STATUS command.

I think that DOS 3 fixed this problem.I'll have to find my manual.

: forr the 1090 expansion box.
: If I could have afforded a Black Box, I would have bought one of them
: instead. As it was I bought the MI/O (256K) used for $80. at the time.
: That was a great price then, since MI/Os were still being produced by
: ICD.

: > He didn't seem to know why SpartaDOS ended up writing to the wrong floppy
: > when you swapped disks while the file was still open.
: > (I read this in the docs for SuperARC/UNARC)

: You're not talking about me. I never had this problem. I've written
: some rather complex, disk intensive BASIC XE programs that used
: extensive file management (SDX version of NOTE and POINT). I never had
: the time to learn MAC/65. I wish I had, but that's another story.

I was talking about Bob Puff,of CSS.SpartaDOS doesn't have file buffers
(nor drive buffers) like AtariDOS/MyDOS.The buffers get dynamicly assigned
to a file's use.If you swap disks while a write-opened file has had data
writen to it (this data is still in the buffers until you close the file)
and then put in another disk and starting reading another files (like what
might be done in a copy operation),SpartaDOS X will start looking for
buffers for the read-opened file.So it'll start flushing the buffers of
the write-opened file,which of course will cause the data to be writen to
the wrong disk.The solution,always close write-opened files before you ask
the user to swap disks.

: Anyway, this topic has been replied to on numerous occasions and I
: guess the 'who wrote what' has gotten foggy. I replied to the original
: guy (I forget who that was now) about file x-fers using a null modem and
: a couple of comm programs. I don't know where all this other stuff came
: from.

: >
: > My P:R:C goes at 9600.In fact,I used it to post my GTIATEXT.BAS message.
: >
: > You may be thinking of one of those graphical text term programmes.

: > --
: > The Doctor

: I still have to try out the GTIATEXT.BAS program you wrote. Looks
: interesting.

It's not much,just shows off a new text mode.

For those who don't know,many games use text modes.Forgotten Island and
Crypt of The Undead are two examples.These are BASIC games,so they are
slow.Text mode means 1/8 the data to move.The CGS system (it WAS available
from Closser To Home BBS,dunno now),which I have never tried,also seems to
use text mode.This is important since modems can only carry so much data
at a time.Sending graphical data would simply be tooo slow.

In case this is confusing,you can alter what "set of characters" the Atari
uses.When you do this,you have the same restrictions as graphics in GR.8.
That how you get colours in GR.0 games.My GTIATEXT programme uses a GR.11
aproach.Might be useful in BBS and BASIC programmes.

There really needs to be a modem protocol that not only lets the BBS
programme define new character sets,but to also set graphic modes.
(and to mix GTIA modes with CTIA modes like GTIATEXT does)
And to control P/M graphics and smooth scrolling and display lists...

Well I don't have De Re.

And the first DLI takes up approximately 70 scanlines. It ends well
before the second one, though.

It has to take up 70 scanlines because it is doing a copper effect.

I'm not using the OS's vertical blank routine, and the DLI's happen in the
middle of the screen, where they're useful.

I've tried to disable all the system housekeeping.

When I do a DLI, does it put the CPU (AND the emulator) into some "OMIGOD
I'M DOING A DLI AND SCREWING UP TIMING!" state, and the RTI magically puts
it into a "THANK GOD NOW I CAN DO TIMING RIGHT!" state?

I'm thinking of offering my source code and data to anyone who thinks they
can figure out what I'm doing wrong.

The timing is important here: the Atari 800 and 400 came out in 1979; John Harris bought and started programming an Atari in 1980 and Jaw Breaker in 1981 (according to Hackers); De Re Atari came out some time in 1981; the Hardware Manual wasn't published until 1982(!). Atari was very tight-lipped about releasing the "secrets" of their computers until they had be out several year, apparently realizing the importance of third party developers to their success selling hardware. (They wanted to do all the software themselves.) When they finally released the information, it was almost too late. I sometimes wonder how things might have turned out had they done this from the start...

Source record: 77614

Hi there all you Atari users.

My name is Alistair, and I live in South Africa. I am trying
to keep all of the computer users of non IBM (or compatible)
computer users happy here. I would like to start a BBS for the
Atari computer. There are many Atari users here in SA, but there
is just no support for them at all.

I sent a letter to the Atari FAQ poster, and he said that it sounded
like a good idea. He suggested that I write to the Atari newsgroup
asking if any of you have a older Atari that you would like to donate
to me to start the BBS.

I do not want anything fancy, and any computer would help. I am
able to get a 14.4 external modem, and could use that for the BBS.

I am hoping to offer e-mail, ftp access, newsgroups and basically
anything else that the users would like to have. It would of course
be a free BBS and anyone that helps me will be given due credit.

Please, we really need your help.

Hope to hear from you soon!

Your's Sincerely,
Alistair Phillips

It's been awhile but I have read that book or one that covered a lot
of the same ground. I have also seen much of it had to say covered in
ZAP! The Rise And Fall of Atari (ironically written before the Tramiel
incarnation of the company...dillweed OBVIOUSLY did not learn from
history).

>Companies want to control their markets as best they can and controlling
>Atari programmers was the best way to do it. IBM also wanted to control
They were heavy handed and stupid. More programmers means more
quality software for the platform means increased demand for the
platform means eventually increased profits for the software division
(even with the competition). It is not possible to eat both the
software cake and the hardware pie.

>their market, but tried to do so at a hardware level. Both companies
IBM used a conglomeration of off-the-shelf parts to build the original
PC. The only really unique part of the system was the BIOS which was
soon "clean-room" reverse engineered. Therefore one could easily and
legally clone the system (which led to a proliferation of standards
but it also led to competition at all levels of marketing. This keeps
an IBM at least 300 to 700 dollars cheaper than an equally powerful
MAC. More about the REALLY big dillweeds at Apple in a moment).

>failed miserably..... For Atari, it meant death. For IBM, it spawned a
>huge industry (just not theirs...). No nice guyz ever ran a billion
>dollar company.
Perhaps that is true but heavy handed shitheads can kill a company
even quicker. The MCA architeture for the PS/2 line was IBM's attempt
to kill the clones and monopolize the business PC market.
Technically, MCA was a winner. It ran at the system bus speed and
offered greatly simplified installation of expansion cards. It also
greatly minimized hardware conflicts. Marketing wise it was the flop
it deserved to be. IBM would only let competitors build computers AND
periphreals for the bus after paying a very high licensing fee. The
business world instantly recognized that IBM was trying to put the
same hammerlock on them that Apple did with the highly proprietary
hardware and software in the Macintosh. Sure it was a snap to install
and use but there was next to no competition on hardware expansion for
the unit and it was a long while before Apple even tried to build

decently expandable systems. Only too late has Apple allowed PCI bus Macs and Mac clones. By trying to make all the money, Apple, IBM, to some extent Commodore, and Atari have put damn near all the money into the pockets of the clone manufacturerers and independent software houses. Good capitalists know better than to try to stifle competition. Only the PC clone manufacturers and software houses seem to realize this (with the possible exception of Broderbund...)..

: Does such a thing exist? Would someone be willing to make one?

There was a analog joystick for flight simulators for the ST.
Unless there's something really weird about the ST,it should be usable on
all personal computers except the PC and Apple.

A Atari analog joystick would use the pot lines for the joystick itself.
The digital jostick lines and fire button could be used to provide 5 fire
buttons!!!

The trouble, Ziggy, is that anyone who tried to obtain the rights to do this in the past was greeted by the absence or stone silence of the copyright holders. Many can't or won't be located unless there is a rather significant buck in it for them. Meanwhile, if the "middleman" has announced his intentions to the community involved, be it Atari or Apple or Commodore, he is hounded from that side for progress reports.

It's been a thankless task, so far, by all reports I've heard. As Jon Mordosky pointed out, new legislation may make it even more difficult.

None of that means, "don't try," but be prepared for a frustrating time.

DUMMY! I am one of the pirates from the past!
Thats the point! If I hadnt kept my knowledge and got the stuff back,
it'd be all gone! If you read all the history of my posts to this
group, you'll see I NEVER apologize for helping ruin the 8 bit atari!
I was just a damn kid with a new toy!
And I dont apologize today, like the grafitti artist that spray paints
his name on the subway cars downtown so did crackers in the old and
the new days.
I NEVER justified any of the copyright violation. Maybe I should have
gone back to the old ways of being a prick and withholding "warez"
from people!
Why do you think most crackers put the date in that they cracked
something? Its not to memorialize the date - its to show all the shit
pirates that they cant get "zero day" warez!

Sorry to spout off, but dont act "holier than tho". What I mearly said
was that if I had the inclination to change all the text back, I
would. I don't see "kilroy" here who was the worst offender, along
with the Nose, in changing text. After I realized I could just put a
loader screen in, I did!

>give him any information when he was trying to learn how to program it.

Look at the key word there - Atari wouldn't GIVE him any info. Atari sold the documentation for the 8 bit at very reasonable prices. The hardware manual (with full register specs contrary to what the Commo fan wrote), De Re Atari which was filled with wonderful ideas about what the special hardware put into the machine could do (always use this book when looking for a new programming project.), the source for the OS and the basic compiler. These manuals ranged in price from about $15 to $25 (I paid $50 for the hardware manual and the OS source book.)

I chose the Atari 800 for two reasons - the full availability of specs -hardware and software - and the fact that the Atari had a true OS - one where you could change anything you wanted because all OS software was linked through table vectors in ram that you could change. No other OS had these capabilities. The Atari was a software hacker's dream come true. And yes, they did not give the info away but sold it at reasonable prices.

rest of whining deleted. Wayne

-I was up on the new site for Yogi's FTP site (www.blast.net).
-It's super hard to connect to with Lynx since it keeps loging in and out
-everytime you do anything.(Yogi's site has a limit of 5 users)
-I saw a new site,but all the boot disks are kept in "ATR" files instead of
-DCM files.

Actually, only the cyberspy archive has the 5 user limit, Hackerz should not. If there is enough demand for it I will throw the DCM files in there. BUT not Arc'd, there are too many versions of ARC. I think Tom Hunt has a program to d/l ATR's directly.?
Tom?

BTW, the easiest way to get an answer about the Atari archive is to ask me directly..... I do read the newsgroup regularly, but sometimes do not feel inclined to answer. Email is much better

From what I recall you have alot of time, however if you set up a DLI to occur before a previous one is finished you could have a problem.

I would be sure to double check the registers you are pushing and poping, also be sure you are not changing memory that the mainline code is useing.

Read the history books. Atari was in trouble long before JT. In fact, it
was in trouble in some ways when Warner picked it up from Nolan Bushnell,
and Warner compounded the problem by not knowing anything about computers
and being unwilling to learn. In fact, Nolan advised Warner to stick to
game machines, which they didn't do. JT and his guys merely added to the
problems, but I think they made an honest effort to keep the computer end
afloat. By the time the Jag hit, there was no money to market it
successfully.

5066. Re: The book "Hackers" and Atari

The book sounds interesting, its called HACKERS??? and who is the publisher and if possible, whats the ISBN???

I think that perhaps since one pogrammer complained that doesn't represent all of them, for example about 10 years ago there was a Compuserve roundtable where they interviewed some of the programmers from Activision and these were all former Atari employees who started Activision, they said they had it great, free food and soda (gotta keep that sugar rush going!!!) coaches to sleep on, arcade machines to play and other assorted perks, they said the only thing that miffed them and made them leave was that Atari would never allow them to place their names or initials in the games and their names were not mentioned anywhere on the boxes or instructions, they just wanted to be acknowledged for their work. Thats why on any Activision product you see all the programmers and names. From all the people in Atari (whether is INC or CORP) they loved it.

:
: I read the book a while ago, so my memory is really foggy. Did the John
: Harris incident and the Sierra thing happen during the Bushnell
: ownership, or was Warner in control? If it was Warner, it would seem to
: make sense. Those guys seemed to know nothing about computers or how to
: market them.

It was Warner-era. The sad truth there is that the chief exec had a
background in textiles and referred to programmers on the same level as
towel designers.

: I also seem to recall a courtroom scene in the book where Ataris lawyers
: were questioning some game programmer about his flowcharts and source
: code, and he just laughed at them and said he wrote the entire program in
: question off the top of his head. The lawyers were dumbfounded. Can
: anyone fill in the details on that one?

Basically, that's what happened. I don't think it was Harris, it was a
different case. The lawyer wanted documented source code and there simply
was none.

> especially their slogan "Power without the Price!"
>
> ==Thanx==
> ===Ben===

Ben, I used to hate it when people said that Atari was dead. But now
its true.
There is no more Atari computer company. Your 'Multisync Switch Box' is
not
only totally unnecessary on new equipment (the need for such was just a
way to
sell monitors anyway), but you can make one yourself with a small platic
box
and a rotary switch. Total cost about $5-$10 and 30 mins to an hour of
work.
So, forgive me if I'm not floored at the loss of the WonderTech and his
super switch box.

Toad prices suck. All Atari prices such. A Pentium 90 w/512K cache,
dual EIDE
controllers, dual 16550 UART serial ports, parallel, full PCI, etc, is
$250!
Add a case, hard disk, monitor, and keyboard - all of which can be had
at your
local sidewalk sale for pennies, and you have a decent machine. Add
Linux for
an OS and you never have to look at MicroSloth either. I hate Intel,
but the
ST just doesn't have the power, and its WAY too expensive to upgrade.
That's
why I dumped the Atari 8-bit - upgrade was too expensive. Now there
isn't any
cheap Atari to upgrade too. Sure a Hades would be great, but if I was
gonna
buy another unsupported piece of hardware, I'd get a BeBox - at least
that has
some upgradeability and a decent price point.
```

CYA,
Evan

>was in trouble in some ways when Warner picked it up from Nolan Bushnell,
>and Warner compounded the problem by not knowing anything about computers
>and being unwilling to learn. In fact, Nolan advised Warner to stick to

I agree. My understanding is that Tramiel walked into a very difficult
situation. Atari was bleeding cash so badly. And, the Tramiels did step
on a few toes trying to pull the thing back together. They never really
seemed to have the cash behind them. And, they were eaten alive by the
DOS compatible computers. Nobody wanted non-dos machines anymore.

Originally, I think part of the problem was that the '2600' successors never really
were sufficiently cool to keep the interest going. The way Nintendo and Sega
have been able to keep up interest with SNES and Ultra-64 and the like.

And I think the 5200 joystick really sucked. My opinion is that the 5200/7800
systems probably could have kept the lead over the NES if they had better
joysticks. The NES which took over the market later isn't really that far
advanced from the 5200/7800 machines. They just had better games and sticks.

Also, I think after a time, Atari just had too many formats out
on the market. So, there were 2600 carts, and 7800 carts and 5200 carts and
Atari 800 carts. I don't think consumers can get this. All they know is
Atari or Sega or Nintendo. If you have more than two incompatible cartridges
on the shelves at Toys R Us they're just confused all to hell.

I think the person who put a billion dollar business into the toilet was
Ray, I don't really like video games, Kassar. How this pinhead got to the head
of Atari is beyond me. Typical example of an American business run into
the ground. This bozo is why money we spend on home video games today
all ends up in Japan.

5076. Atari Prototypes Auction #1 (Update #1)

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-29 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19961229153000.KAA09653@ladder01.news.aol.com>
Source record: 77541

ATARI PROTOTYPE AUCTION #1: (UPDATE #1 12/29/96)

The following RARE items are available for auctioning.

RULES: Bids start at specified price and will go up in $10 increments. Updates will be posted daily to all bidders. Auction will go until Jan 10th 1997 and will then enter the GOING, GOING TWICE, GONE stage. All bidders who make it to the GONE section of the bidding are responsible for shipping costs. All items will be shipped PRIORITY ONE MAIL. Please don't bid unless you are serious about buying. All items are sold "as-is" and there will be no returns and/or refunds. No items will be shipped until payments are received and cashed.

Atari SALT Diagnostic Module: Enclosed in an Atari 850 interface, has 1 Serial SIO port, 4 Atari RS232 ports, power input, an RCA plug where the Parallel intreface would normally be, and 2 14 pin chip sockets, an HP seven segment ultra-bright LED display and reset switch. Unit powers on and doesn't cause any Atari that was hooked up to it to freeze. Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (3 Available) Minimum BID: $50.00ea.

BID: $50.00 MKyle

Atari XL Salt Diagnostic Module: Enclosed in an Atari 850 interface, unit has PBI cable comming out of right side SIO connection cut-out of 850 module for testing parallel bus interface.
Salt Diagnostic ROM or disk software required to activate and use this unit (NOT INCLUDED), picture available on my web page upon request. (1 Available) Minimum BID: $75.00

BID: $75.00 MKyle

EXTREMELY RARE: Atari 6402A Prototype Motherboard (only 3 exist!!!) Prototype motherboard, apparently a test bed which has all the same components contained on an Atari 1450XLD "TONG" version motherboard including disk drive controller area, modem area, SC-01 voice synthesiser, Parallel Bus Interface. This unit has ports positioned on all 4 sides and does not appear to be a "commercial" product but appears to be more of a test design to condense the Atari 1450XLD TONG motherboard down to about 1/2 the size, (unit is NOT functional)
Minimum bid $120.00
Image will be posted on my webpage upon request

BID: $120.00 MKyle

Atari XE Game System 8 port multicart prototype board:
A prototype test board which may have been a pre-design idea to allow the XE game system to contain and select up to 8 cartridges (this of course turned out to be built in BASIC and MISSLE COMMAND in the released version) The board is about 8" by 12"
Minimum Bid $50.00
Image will be posted on my webpage upon request
BID: NONE

Atari XEP-80 Prototype:
Atari Corp design prototype of the XEP-80 system. Design consists of a mainboard, daughter card, DB-25 connectors and Atari joystick interface cable, this unit has never been tested and I am not sure if the current commercially released XEP-80 software will work on this pre-design prototype.
Minimum Bid: $75.00
Image will be posted on my webpage upon request

BID: NONE

Make all bids and requests for images to:

Steven Tucker's docs state clearly that the program will not work under
any kind of multitasking environment. That rules out Windows of any
flavor.

However, I seem to recall that A. P. E. will work under Unix with some
adjustments that are also listed in the docs.

Yes, there are quite a few emulators you can run on the PC,
PC Xformer available from http://www.emulators.com/
or there's XLit 0.16, but I'm not sure where it is (I have a copy if
you want me to email it)
BUT, in my experience using emulators you are far better off with the
real ATARI, cause the EMU's just don't seem to handle some software
(eg. SpartaDOS, SuperDOS, and any other DOS or program requiring high
speed disk IO). Also, running XLit, the sound DOES work through a
SBlaster, but you need a faster PC than mine (486 DX2-80) to be able
to play sounds at the correct speed (music is veerryyyyyy slow).
As for transferring your ATARI software, check out my Home Page
(hopefully listed at the bottom). It has info for the SIO2PC cable-
which emulates ATARI disk drives from your PC, and a program which is
called MYUTIL (not that its actually mine, thats just what it's
called), this will read and write an ATARI double density disk on your
PC's 5.25 disk drive.
Drop me an email if you want any more help...

Steve.

While we're on this thread, I might as well ask a question: Has anyone had any success running APE via Dosemu in Linux? I've tried the latest version of Dosemu, and followed Steven's directions in the APE documentation, but it doesn't -quite- work.

I'm able to boot to the selection menu on the Mydos ATR file, but it does so very slowly compared to when I run it from DOS. When it loads further, it just seems to hang at some point.

(I'm running Linux 2.0.27 on a Pentium-133.)

What is the mistake with long filename support? I hope its working
good for you.

> command line only option but not from a Dos prompt window..
> Running on a P133 with 24megs mem...

Try moving your APE com port to one that does not share an IRQ with
your mouse. Your windows mouse driver may be causing a
problem w/ com port contention in w95 which would cause
the no response problem.

Try your Mouse on com 1 and your APE cable on 2 or 4, or the other
way around.

When using w95 all your serial in/out requests are trapped in ring 0 and
have to go through a number of VxD's to reach the hardware. If any
of these VxD's decide to ignore stuff from your new com port in
favor of the mouse driver, it will act dead.

Steve

PS. Remeber your not going to get optimal performance under Win95
unless you have a REALLY fast machine. :)

Actually the docs say that it is not mean`t for a multi tasking
environment but various people have reported success under win95 on
faster pentiums. He himself suggest ways to try and run it under 95
via a dos prompt.

Hence the enquiry... :-)

All I want is the long file name feature working..I don`t know if
there are ways around that bit ie can dos be forced to read long names
in ape??

Thanks....

I've had the same problems. I thought it was my ISP (could still be). I
alerted them a few weeks ago and they said they were having some problems
with their news server and reinstalled it a short time later. I haven't
noticed duplicate delayed posts lately, but I still miss some messages
here and there. I check Alta Vista occassionally if I think I missed
something important--everything from the last two months is there. (I use
Newswatcher for NGs and Nav for WWW.)

Oh. Then you DIDN'T delete any authors names from their programs.
Maybe Mr. Billyard will come to realize that his game Chop Suey might
be lost forever if not for your efforts. A lot of those old floppies
are probably failing by now.

>What I used to do for my personal archive in the 80's was to keep a

: >
: >SAVE "D:PROGRAM.BAS", in an attempt to save a basic program,I get an
: >error 130. I would be most obliged if you could enlighten me.
: >

: Ok, to get it working you need to have a DOS virtual disk as D1. This
: means that when you start the emulator, you must add a reference on
: the command line to an ATR image file.

: for example: (this should work with any emu you have)

: ATARI DOSDISK.ATR (this is for XLit)
: XF25 DOSDISK.ATR (PC Xformer)

: Once you have started the emulator, it should be in basic- but there
: will be a slight pause while DOS loads. If you want to check that DOS
: is actually loaded, type DOS at the basic prompt, and that should take
: you to the DOS MENU. You can then press "B" (run cartridge) to return
: to basic. Hope this helps........

But remember:typing "DOS" erases you programme.(except sometimes in MyDOS)
Before you type any programmes in,goto DOS and use the "N" command.
This will activate the MEM.SAV feature which will save part of your BASIC
programme before the DOS menu ("DUP.SYS") loads up,and re-loads that part
when you go back to BASIC.

But if you load a game or something from the menu before you go back this
will probably overwrite your BASIC programme.Some copy operations also
corupt memory.

> Atari or Sega or Nintendo. If you have more than two incompatible cartridges
> on the shelves at Toys R Us they're just confused all to hell.

The 5200 had very poor joysticks; however, its ability to run all the
4oo/8oo software with only slight modifications gave it a great
advantage. What hurt the 5200 most was probably timing -- it was released
right before the crash. And there was a great deal of competition at the
time -- Atari with the 5200, Mattell with the Intellivision, and of course
the Colecovision and minor players like Bally and Magnavox with their
cartridge-based systems.

The 7800 was released at the height of the crash; many units sat in
warehouses for years. The system was poorly marketed and had pathetic
third party support, at least compared to the NES. As for the hardware
itself, aside from sound, it was probably better than the NES; I don't
think it's fair to compare either to the SNES, which was released pretty
late in the game, circa 1991.

The Jaguar was also a fine piece of hardware, but it suffered from the
same problems. Although it wasn't released during the crash, the
marketing was very poor. Not enough money was spent on promotion, and
third party developers were not attracted to the console en masse. And,
there was no blockbuster pack-in like Donkey Kong Country on the SNES.
So, even though Atari was first to market a next generation console, they
captured almost no market share.

You are correct, Atari did fall victim to some extent to having too many
formats, Sega has this problem as well (Sega 16-bit CD, Sega 16-bit
cartridge, Sega 32X, and Sega Saturn).

I too am experiencing problems. It happens quite often that I read replies to posts I have never seen. Also, duplicate messages sometimes tend to show up in batches, several weeks after the original posting dates. These are the same problems I had several years ago, when I was reading the news on my Atari. Now I am using Internet Explorer with a different provider. I sometimes gopher to an archive in Germany to find posts that must be there.

My guess is that these problems are somehow related to the Netherlands and have existed for a long time.

I've seen this cable mentioned many places, saying "its easy to build" and "download the plans..."

I've been unable to find them, and Branch Always Software will only say "They'll be on the web site soon".

I 've been sitting on my hands since buying the Xformer 3.5 emulator cause noone can sell me a cable, either!!

Any chance some out there can email me the plans so I can start transfering al my files over?

Thanks in advance!

I'm not sure about the emulator problems, but the DLI limitation is simple. You only have a total of 18 clock cycles to work with before things start hosing up bigtime. This is the time frame from the horizontal sync to the first data on the scan line. Basically all you have time for is to change one or two color values to change screen colors, or one or two values in memory.

Hope this helps.

I personally haven't dealt with Toad since I met the Troy's at an
Atari show several years ago. They had a bin full of 8-bit carts that
were selling for $10 a piece (even though you could find them
elsewhere at the show for a buck or two). Anyway, I found a rare cart
in there and when they saw me looking at it, Mrs. Troy literally
snatched it out of my hands from across the booth and rudely told me
it wasn't supposed to be in the bin! I'd never had someone do this to
me before or since, even with all the hostile people I've dealt with
at flea markets over the years, and I was quite pissed! There could
have been another way to tell me the stupid thing wasn't for
sale...Anyway, I appreciate that they support Atari after all these
years, but get real...they have always charged close to full retail
for EVERYTHING, since the very beginning. How the hell did they
survive this long dealing Atari wares when all the good vendors fell
by the wayside?

Just my 2 cents worth...

Greg

There is a program that allows changing character sets, screen colors, and graphics modes. CGS (Color Graphics System), written by Tom Hunt. The original release (0.9x) worked with Bobterm. The only drawback was that you HAD to have either a RAMdisk or hard drive from which to load the fonts. It was a good attempt to get a little variety into Atari BBS'ing. In fact, I designed the chess font for it. Not perfect, but it does the job. dB^)

(Nothing I know of for PMG, though..) dB^(

: >files being stored in ZIP files?
: >--
: > The Doctor

: Well, for a start an ATR file is actually a full DISK written in a
: format that can be "booted" either using the SIO2PC cable (for which
: you need a PC to connect the ATARI to, and run software on the PC to
: emulate an ATARI disk drive), or any of the current ATARI emulators
: use the ATR on the command line as a virtual DISK.

I still don't understand.Why not put them up as DCM files,and then the PC user
can use DCMTOATR (DCM2ATR?) to convert them to ATR?

: The reason for placing COM and EXE files into a ZIP format, is that
: many ATARI users actually use their PC to download the files, extract
: and then port the COM/EXE files directly to an ATARI disk, or disk

: image. Of course if you only have an ATARI computer, well, methinks
: time to get a PC. It's just so much easier to use the PC as a medium
: for the ATARI. As you have stated- the ATARI computer doesn't have the
: disk space to download HUGE ATR and ZIP files, and work with them very
: easily. The only way to get the ATR files I think would be to get
: someone to convert them to DCM format. Then the ATARI could work with
: it, of course if you have at least a Doubled 1050 drive. As for ZIP

Why would you need a doubled drive?
Any DCM file should fit on a 1050.At least any file that I've ever seen.
(remember that DCM is a much better format than ATR,and doesn't waste space)

: files, Good Luck... I haven't heard of a ZIP utility for the ATARI.

I think it only does Imploded files.

: : the TUR (BAS?) files to use with TurboBASIC 3.2q.
: : (TurboBASIC for SpartaDOS.I assume it will also work with MyDOS)

: : Also,the ATR files seem to be as big as the actual disk they contain.So a
: : single density disk ATR is 90k.It seems to me that you could only download
: : these ATR files if you have a better drive than the one they are for.
: : You need a 1050 to download the 90k files and a double density drive (like
: : the XF551) to download the (few) 130k files.Am I right about this.

: ATR files are just raw disk images, with an extra 16-byte header tacked
: on at the front. (XFD files are the same files without the header; in
: other words, pure disk images.)

yeh yeh,I know what they are.I have a ST as well as a Atari.No Xformer
cable,though.

: The 1050 can actually handle both the 90k and 128k disks, but that still
: doesn't make it any easier to download the files.

If a ATR file is a actual sector-by-sector disk image then you cannot.
Even a freshly-formatted disk has sectors in use by the directory and VTOC.
No DOS in existence could ever give you enough room to download the ATR file.
You would have to have a file-transfer protocol that would actually un-ATR
the file as it was being download.

: One solution is to use something like APE, and daisy-chain it with a
: regular 1050. Copying disks or files this way works very nicely.

If I had a PC,that would be a option.As it is,this is really for a friend
and she will NEVER have a PC.Her Atari is loaned from me.

: There's another cable that connects the PC to the Atari's joystick port,
: allowing you to copy disks between the two. The advantage of this one is
: that it requires less hardware than the SIO2PC/APE cable (it's just a
: bundle of five wires). The disadvantage is that it's quite slow (about 6
: minutes to transfer a 90k disk). (As a substitute for the Xformer cable,
: which I could never get working, it was wonderful.)

That sounds pathetic.IT must've only have used one port.I know that the
Corvus hard disk drive use the second two joystick ports and it was
supossed to be fast.

If I had a PC,I'd rather use it's floppy drive to transfer files.I had a programme that would write out Atari double density (256) disks,but it only worked on text files.But it shows that the PC drive will write out Atari disks.

: If you are using an 8-bit computer and XMODEM to download software from the
: net, considering the cost of computing equipment, you're treating your time
: as if it were worthless.

Personaly,I use Z-modem on my Atari.But many people don't know about the
limitation of X-modem puting garbage at the end of a file.
It also happens with Bobterm and Y-modem when uploading from a Atari/MyDOS
disk,instead of SpartaDOS.Since Bobterm doesn't know how big the file
is,it doesn't send size information which causes garbage at the end of a file.
I don't know if any other term programme uses SpartaDOS's filesize-getting
function with Y-modem,so I'd use BobTerm to upload/download.

(when downloading,of course,the filesize is always corect with BobTerm's
Y-modem)

You can also use Bob Puff's FILEFIXER to cut off the SUBs(^Zs) from a file.

I guess I'm being a bit over sensitive. We've all hacked games - many
hours of
challenge there - but it just would seem best to do it with a bit of
style by
frigging the display list to *add* a line that you've cracked it rather
than delete
the authors name. Thats all. I didn't realise that Yogi simply
replaced the name
that was already on the version of Henri. Apologies. And I do
appreciate Yogi's

efforts to maintain this archive - good stuff!

: Whelp, since the subject is C and Atari 8-bit...

: Why not:

: #define REALLY_BIG 6000

: main() $(

: FILE *in, *out;
: int error;
: char buffer[REALLY_BIG]

: in = fopen("filename.one","r");
: out = fopen("filename.two","w");

I don't like using library functions.I tried to programme in C on a PC once.
(using Borland's Turbo C)
Something as simple as file=fopen("\dev\mono","w") failed to work.
(\dev\mono was my MDA monitor)

: error = fread(buffer, REALLY_BIG, 1, in);
: if (error > 0) /* Then it's the actual size */

I never use the library functions,but don't they return NULL (0) when
there's a error?
Doesn't fread() return the number of bytes actually read?
If not,then how do you know when you reach end-of-file?

: $(
: error = fwrite(buffer,error,1,out);
: if (error <= 0) printf("Error %u",error);
: $)
: else printf("Error %u while reading",error);
: fclose(in);
: fclose(out);
: $)

: CC65 is the coolest....

I've only used Borland's Turbo C++ (which sucks,no curses suport.poor
suport for UNIX DOS access) and GCC under Linux.Maybe CC65 works differently.

: someone else may have left them open. Close the channels
: when you're done, someone else may not close them before
: they use them. It's that simple, not clutter, and I
: appreciate the person who said it was 'good form'. As for

But ALL channels are closed when you RUN a programme,wtihout exception.
And END,or simply running out of lines of execution also closes all files.

Try this:
```
10 PLOT 10,10
20 GRAPHICS 0:REM the equivilant of OPEN #6,12,0,"S:"
GRAPHICS 0
RUN
PLOT 10,10
```

Neither PLOT statement will work.The first won't work because the RUN
command closes all channels/files.(channel#6 in this case)
The second won't work because after a programme ends (you don't need "END"
at the end of a programme like in other BASICs) all channles are closed.
(but the BREAK key nor the STOP statement will close channels)

So you see,you never have to close channels after you're done because they
get closed automaticly,and all channels are closed upon startup of your
programme.

(of course,channel #0 is un-afected throughout all of this)

The only thing I can think of is if a BATCH file runs a BASIC
programme,and that programme tries to open #4 to a disk file.
(channel #4 is opened to the batch file running)
Also,if the SpartaDOS's PRINT command is in efect,you can't use #5.
(for disk access,that is)
I liked the way DOS XL batch files worked better.Channels weren't left open.

: STATUS, I forgot if it returns a 0 or 1 on success. I think
: it is a 1, so my code had another error. Initing variables

The STATUS command is used to tell if a file was opened corectly,acording to
my DOS manuals.Of course if there was a error,your programme would abort.
(if you used a TRAP statement,your TRAP line would be "GOTOed" and it
could simply PEEK to find the error code)

I've never seen anything in a DOS manual about checking for errors on
reads and writes.
I know that the "Atari XL User's Handbook" says something about STATUS
returning 1 on normal and 3 on "aproaching" end of file,but that must be
for DOS 3.DOS 2.5 doesn't work that way,believe me,I've tried.
(I'll have to boot up DOS 3 one of these days and try it's STATUS command out)

: at crucial times saves a lot of debugging time,
so I init : 'error' before each STATUS. This is not necessary as the
: STATUS will put a new value in there.

(always)

: If you use a different DOS than SpartaDOS, that's fine.
: Personally I like SpartaDOS the best. I suspect it works
: best with my MIO, RT8, US dblr. If I had a black box, ultra

: author claims it to be. Have you ever checked out X Maelstrom?
: It runs fast as well. Im not sure how XQuake performs.
: X does have a certain amount of overhead, but if you base your
: opinion of X off of XTank or Xasteroids then you're only seeing half the
: picture. Check out X-doom, XMaelstrom, and even X-Quake.

Actually,X-asteroids was one of the playable games.Aparently 40mhz is fast
enough for 2D wire frame graphics.3D is another situation.

Believe it or not,I tried X-DOOM and have totaly forgot the frame rate it
gave me.Not that it matters,it ran in a small window.so it doesn't count.
I'd have to run it full screen,but I think that the X-server doesn't do
320x480 or anything like that.
(I assume DOOM runs at 320x480 or some other vertical resolution.Doesn't
DOOM run on a normal VGA card?(VGA doesn't do 640x480x256))
So if I ran it at full screen,it actually take up half of the monitor
since it's a 320x480 programme.
Of course I have no idea how to make it run with a bigger window.

I remember always using sdoom (non-X) instead of xdoom though.

5121. Old Atari Games

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-30 00:00:00 UTC
From: Adam Billyard <ads@csl.com>
Message-ID: <32C7A0F8.18EA@csl.com>
Source record: 77440

I've been trawling thru all the old Atari games trying to get a feel for how "good" they really were. Since I'm still in the (PC) games business, I thought it might be fun to look back at the supposed "golden years". My overall impression is that most games back then (I include my own) were absolutely dire. Its not that the graphics were that much more crude, its more that most of the games had no understanding of gameplay, of closure, of UI issues. There are some notable exceptions but its interesting to realise that just as now, there was such a large proportion of rubbish being passed off as "games". Yet there seems to be a common belief that games in years past were somehow better, purer etc etc. Where does such a view come from?

: I agree. My understanding is that Tramiel walked into a very difficult
: situation. Atari was bleeding cash so badly. And, the Tramiels did step
: on a few toes trying to pull the thing back together. They never really
: seemed to have the cash behind them. And, they were eaten alive by the
: DOS compatible computers. Nobody wanted non-dos machines anymore.

What do you mean DOS compatible?You mean they have disk drives?
(DOS is a device handler,not a language)

: Originally, I think part of the problem was that the '2600' successors never really
: were sufficiently cool to keep the interest going. The way Nintendo and Sega
: have been able to keep up interest with SNES and Ultra-64 and the like.

: And I think the 5200 joystick really sucked. My opinion is that the 5200/7800
: systems probably could have kept the lead over the NES if they had better
: joysticks. The NES which took over the market later isn't really that far
: advanced from the 5200/7800 machines. They just had better games and sticks.

The 7800 is more advanced that the NES.

As I remember,Nintendo has those weird "pad" controllers.I only ever used
those because I could never find a right-handed joystick!
(is this something like left-handed=more creative and spatialy oriented?)
IT's not really worth teaching myself to be left-handed,like they used to
do to kids in school long ago.(except they tried to teach kids to be right
handed,not left)

: Also, I think after a time, Atari just had too many formats out
: on the market. So, there were 2600 carts, and 7800 carts and 5200 carts and
: Atari 800 carts. I don't think consumers can get this. All they know is
: Atari or Sega or Nintendo. If you have more than two incompatible cartridges
: on the shelves at Toys R Us they're just confused all to hell.

Oh please,I can't believe that someone would buy a 5200 cartridge for
their 2600.Now I could belive 7800 for their 2600 since they look identical.
Of course if they got it in the box,then there's no excuse.

> etc etc. Where does such a view come from?

One reason that games were better in the early 80's is that programmers were more creative.

When I walk into an arcade now, I see two types of games dominating: fighting games and racing games. These are typically $5,000+ machines and sport excellent, real time 3-d graphics.

But there isn't the variety of the 8o's games. When was the last time you saw a game employing a trak-ball? Or two joysticks, ala Robotron, Battlezone, Smash TV, or assault?

Games that filled the arcades 10 years ago were largely completely different from each other: Centipede, Asteroids, Tempest, Stargate, Ms. Pac Man, Joust, Galaga, and Space Invaders. The control mechanisms were very different, and the titles had to rely on gameplay, since typically, the graphics were mediocre. The reason games were "better, purer, etc" is that the games couldn't hide behind fancy graphics and sound. Pong and breakout weren't great games because their CPU's moved millions of polygons per second; they were great games because of gameplay.

On home computers, I agree, there were many titles which were worthless, but there were also a great number of games that are still worth playing today (try Mule, Archon 1, Archon 2, Necromancer, and Ball Blazer).

In the mid-80's when Atari was using the slogan "Power without the Price"
It was true. You couldn't buy a better system for the money. The problem
is that the prices on Atari hardware became stagnant, while hardware prices in
the PC world dropped rapidly. For instance, in 1992 Atari released the Falcon
'030 (1 meg, no HD) for $799. Today toad is still selling the MK-I falcons
with the same specs for... $799. In 1992, $799 might have bought you a 286
or 386 system with 1meg and a small HD if you were lucky. Now you can buy
a low-end Pentium-class machine with 16meg RAM and a 850meg (or better) HD.

Add-ons are similar. For over $150, you can take your 8mhz ST to 16mhz with
an Adspeed. For about $50 you can replace a 66mhz 486DX2 with a 133Mhz 5x86
CPU on a PC.

I would love to have an Atari clone that was as powerful as my PC (like one of those
Medusas or Hades machines) But at $3500 for what is equivalent to a slower
Pentium at best, I just can't afford it. :(
```

As Mark Simonson said, the timing is important. The first few years, Atari would not release any information. That may seem like no time at all looking back 15 years, but remember that, then as now, a year is a lifetime in the computer industry.

Early in "The Creative Atari" (a collection of Atari articles that appeared in Creative Computing in the early 80s), Jon Anderson mentions that Atari has given him lots of info, but he isn't allowed to publish it unless he discovers it on his own -- essentially an NDA.

I find that true of as least as many games now as then. Most games today bore me. The UI issues, at least on home machines, were limited by the 8-position 1-button joysticks. And if I understand correctly what you mean by closure, I don't like it -- once you finish a game with "good closure", why bother playing it again?

Didn't Chris Crawford write a book on this stuff during the "golden age"? "The Art of Computer Game Design" or something?

> I really don't understand all of this talk about copyrights.
>
> Information should be free
>
> Period
>

As I was growing up, I discovered I had a choice: a) Become a caveman, and be totally self-sufficient (i.e. build or find my own shelter, make my own clothes, grow or find my own food, etc.), or b) Become good at something, and trade with other people for the things I need. I chose the latter, and became an Information Systems specialist.

I've never been a carpenter, but I live in a house. I'm not a farmer, but I eat food nearly every day! And so on. I've accomplished this by trading (indirectly, via an abstraction called "money") my skills (including programming) for the skills and materials of others. As a result, I'm having a much more rewarding life than I would have if I chose "caveman."

Now, I'm explaining all this because I might not have the same vantage point that you do. Can you explain to me, from this context, why information should be free, "period," as you say?

... and why should it be more free than, for example, housing or food? Or perhaps an example closer to home would be health care services? Should we all just start taking health care services without paying for them?

It's probably not a problem with APE. Microslop's Winbloze 95 just sucks ass! Even Atari wouldn't release software this shitty - and we all know that they released some trash for the Jag. Sorry to anybody who likes it / still uses it. This is just my opinion and we all know what opinions are like.

Adam, personally I think that "boom" in computing became a slippery
slope for computer playability. I look at Jumpman, yes its a stickman,
yes its appalling to look at but Hell is it playable...Thats it!!!

The one thing that most do is look at the games from then compared to
now with 64bit fog misting their judgemment, you must look with better
eyes (to quote The Abyss). There is so much crap being peddled as next
generation gaming, almost all is pure eye candy....

With the above in mind go back and play Spelunker, jumpman, preppie,
shamus or Race on space...the list is endless. Play them as if you had
not seen a N64 or a PSX or PC...

There is a debate in the PSX NG re Robotron X. Loads of noise re the
lack of ending after the 125 levels...Bloody hell I thought I was just
warming up after that ammount on the Atari...

So yes the 8bit stuff is ugly as hell but it plays a dream. There was
crap on it as well but with such low constraints the programmers (like
you) did marvels...Ie creative....

Ramble Mode OFF....Off to give Whistlers Brother a bash....

Source record: 77456

Cheers to Paul --

Until Descent II on the PC, Star Raiders on the Atari 800 had been the very MOST-played game in my life. Everyone's got their faves, but I've gotta say two things: 1) If it weren't for Atari (and the other games of the same era), you wouldn't HAVE the neat games you think so highly of today. Although that in itself is no basis for a euphoric escalation of these 'simple' games to "classic" status, but let's put it this way: after DOOM, X-Wing, and Myst have been played and put by the wayside, when will you find youself picking them back up some Saturday afternoon for just "another spin". Whereas, Star Raiders, Surround, Necromancer and Pac-Man are classics that I can pick up today, next year, ten years from now and still giggle and enjoy as much as the first day I played them. Which brings me to the second point: 2) Raw simplicity. Its those SIMPLE games that usually attain "classic" status. Although Tetris wasn't around back then, consider its simplicity: Anyone can pick it up and enjoy it from the very first time. Pac-Man, Jumpman, Surround, Adventure and so very many games of the 'Atari' era are classic in the very same way.

'nough said -- it's all opinion...yours is bound to be different...

Anyway, I've got a full-size Tempest machine and I think I'll forego Quake, Doom II, and Tie Fighter for the "stick" figures on my ancient X-Y monitor in the living room... See ya!

A few of the very early ones can be used. The trick is that the drive
must allow being formatted at 256 Bytes per sector.
If you are using a embedded SCSI Hard Drive, no Controller is needed.
If I remember correctly, a Seagate ST157N will work. Largest partition is still only
16 Megs

I can't say anything about Atari's computer software division, but...

the 2600 shop did want to make it look like everything came from the Atari entity and downplayed authors. They didn't allow names in the products or on the packaging and that's why Easter Eggs were first created, so folks authors could hide their initials, etc. in the games.

Don't see how John Harris (didn't he write the Sierra On-Line version of Frogger, the source for which was stolen at a trade show?.) could have been excluded from knowing how to write software for the 8-bit platforms. Atari published complete technical specs (including circuit diagrams) so any programmer at the time could have found out what they wanted to know.

Maybe the author(s) of that book are talking about when the GTIA chips first came into existance, but that doesn't fit the scenario you described. Atari set up a distribution channel for independently written software. I don't think they were as nasty as the author states.

Because most of the world uses computers more powerful than 8-bits to
access the internet.

Hope you take this comment as helpful, that's the way it is intended:

If you are using an 8-bit computer and XMODEM to download software from the
net, considering the cost of computing equipment, you're treating your time
as if it were worthless.

(There's been some discussion of my 'Why I do PUT and GET instead of usr calls.)
My usr code had errors in it. I said it probably would. The code made my point why I use PUT and GET instead of usr calls. Why should I spend 30 min. or more coding and debugging a program for one use that I can code, run and erase in 10 minutes?
As to 'why close channels twice?'. To novice programmers, I suggest this. Close the channels before you use them, someone else may have left them open. Close the channels when you're done, someone else may not close them before they use them. It's that simple, not clutter, and I appreciate the person who said it was 'good form'. As for STATUS, I forgot if it returns a 0 or 1 on success. I think it is a 1, so my code had another error. Initing variables at crucial times saves a lot of debugging time, so I init 'error' before each STATUS. This is not necessary as the STATUS will put a new value in there.
If you use a different DOS than SpartaDOS, that's fine. Personally I like SpartaDOS the best. I suspect it works best with my MIO, RT8, US dblr. If I had a black box, ultra speed + OS and other CSS products, I'm sure I would prefer MyDOS. Some products seem to intentionally not work with other companies products.

>WIN 95!!! :)

Don't be silly. There is NO problem with Win95 releasing the COM
ports. I can use COM ports under Win95 DOS boxes any time. With the
advent of Win95, something new in Win started: TAPI. Telephony API.
It allows different 32-bit TAPI compliant software to share modem or
comport resources on a "as used" basis. DOS boxes and other non TAPI
software need exclusive possesion of a COM port, no matter if the
software is actually doing anything with the port at the moment or
not. So to get to the likely problem you are experiencing... you
probably had some Win95 software running which uses a COM port that
you tried to use in a DOS box. An example would be like MS Exchange
waiting for an incoming fax, or some kind of answering machine
software. Simply close any programs that are wanting that COM port
and it should be available in your DOS box.

Cheers,

Jon

>
>Hope this helps.

It doesn't, becauise I know that both of my DLI's use WAY more than that,
and I can use either one of them without screwing up the program. It's
when I try to use them BOTH, is when things go KABOOM! BLAMMO! THPPT! ACK!

Oh well, it doesn't seem to matter much anyway. I put in a few lines at
the end of DLI #1 to put an extra scanline of pitch black in there so I'd
know when it ended. Well wouldn't you know it, it caused the same
problems that happen when I activate the second DLI.

This leads me to the conclusion that the emulator is probably at fault, or
something like that. I'm going to drag out the 800XL and try it after New
Year's.

I need LOTS of changes to the copper list though. My software sprites
make extensive use of them.

While at the time the SIO2PC sound like a good thing for the 8bit, HD
where to high a price for the average person. But these days its a Poor
Mans hard drive.
Its stupid or even SICK to see my Pentium 120 serving files to my 8bit..
I dont see the Logic here.

Get a MIO/BB or KP interface and let the CLONE ALONE.

Yeah, I've read Hackers too. And there's no better way to keep John Harris
out of the newsgroup than to mention it.

John still works with the Atari - MAE is the latest from him that I know of.
He's forgotten more about the Atari 8-bit than I'll ever know.

I have to agree, being one of the original Atari programmers, I had access to anything and everything I ever wanted, be it either hardware, software, or information of any kind that I needed to write programs with. This was true whether I was writing directly for Atari or for my own company.

I truly beleive that the 8-bit Atari is probably the best documented machine there ever was, and possibly ever will be.

Look no further than a recent gaming mag. Of the top 3 all time games, two were Ultima III and MULE... over 10 years old each. The expansion of hardware capabilities hasn't been met with an expansion of gameplay. Today, games are "Look! a licensed product!" or "Look! a DOOM clone." We've left the era of the small, innovative companies taking a chance on niche markets and gone on to corporate pablum, shipped en masse. New games? MOO II has been much hyped, but with a 500mb CD it's barely better than The Cosmic Balance II, which fit on a SD/SS floppy (90k). We now have the tools to produce truly breathtaking, innovative games and simulations. But classics are tragically few and far between.

I probably used front slahes instead of blackslahes.MS-DOS doesn't care
which you use.The point was that open() worked with my filename but
fopen() didn't.I just used open() to open the file and fdopen() to get a
stream.
(that is,a FILE structure for the file handle of /dev/mono)

: modes (i.e., 320x400, 320x480, etc.).

Mine wouldn't go below 640 by something.

: : (I assume DOOM runs at 320x480 or some other vertical resolution.Doesn't
: : DOOM run on a normal VGA card?(VGA doesn't do 640x480x256))

: Mode X, 320x200.

Why do you call it mode X?

: : Of course I have no idea how to make it run with a bigger window.

: You shrink the resolution. I think that's shift + and shift -, but
: it's been a while since I've run X.

It's control-alt + and -.
But I couldn't get down to 320.

: : I remember always using sdoom (non-X) instead of xdoom though.

: Yeah, it works better. I wish that Linus wasn't such an X bigot,
: though---then we might have an svgalib Quake instead of just an X one
: (And GGI, too).

Do you mean that Linus likes or doesn't like X?
It's up to id whether they'll make a SVGA-library version or not.

I know that when I upgraded Linux,that SVGA and X didn't work anymore.
I thought that I just needed to compile them again.They didn't seem to
recognize the virtual consoles as being such.

Are you saying that Linus is trying to kill SVGAlib?

: Actually the docs say that it is not mean`t for a multi tasking
: environment but various people have reported success under win95 on
: faster pentiums. He himself suggest ways to try and run it under 95
: via a dos prompt.

: Hence the enquiry... :-)

: All I want is the long file name feature working..I don`t know if
: there are ways around that bit ie can dos be forced to read long names
: in ape??

MS-DOS could always accept long filenames,since it simply reads through
the filename-buffer until it finds a NULL byte.But the directory function
is limited to "8.3" and the GetCurrentDirectory function is limited to
returning 64-character paths.

So rather than simply introducing new GETDIR and PWD functions,MS-DOS just
has a whole new set of basic DOS functions to access long filenames.
This is because Window95 doesn't really suport long filenames,just
"aliases" for file.These "aliases" can be 256 characters long.But any
programme that uses the normal DOS system calls will just see the REAL
filenames,not the aliases.There are seperate functions in MS-DOS 7 to
access files by their "aliases" rather than filenames.

It's kind of like the "comments" in NDOS (and 4DOS).

: Try moving your APE com port to one that does not share an IRQ with
: your mouse. Your windows mouse driver may be causing a
: problem w/ com port contention in w95 which would cause
: the no response problem.

: Try your Mouse on com 1 and your APE cable on 2 or 4, or the other
: way around.

I never understood why 2 RS232 ports couldn't use the same IRQ.
The BIOS doesn't even use IRQs so it's clear that the BIOS (or whatever)
can detect whether there's data at a port.So when a IRQ sounds,why doesn't
the RS232 handler just look at both ports?

: When using w95 all your serial in/out requests are trapped in ring 0 and
: have to go through a number of VxD's to reach the hardware. If any
: of these VxD's decide to ignore stuff from your new com port in
: favor of the mouse driver, it will act dead.

And people wonder why I don't "upgrade" to Windows.

: PS. Remeber your not going to get optimal performance under Win95
: unless you have a REALLY fast machine. :)

I don't think that they go that fast.

: >WIN 95!!! :)

: Don't be silly. There is NO problem with Win95 releasing the COM
: ports. I can use COM ports under Win95 DOS boxes any time. With the
: advent of Win95, something new in Win started: TAPI. Telephony API.
: It allows different 32-bit TAPI compliant software to share modem or
: comport resources on a "as used" basis. DOS boxes and other non TAPI
: software need exclusive possesion of a COM port, no matter if the
: software is actually doing anything with the port at the moment or
: not. So to get to the likely problem you are experiencing... you
: probably had some Win95 software running which uses a COM port that
: you tried to use in a DOS box. An example would be like MS Exchange
: waiting for an incoming fax, or some kind of answering machine
: software. Simply close any programs that are wanting that COM port
: and it should be available in your DOS box.

See how that rather than fixing the /dev/aux device so that it actually
works so that programmes don't have to access the hardware directly
(something that even the little Atari (usually) doesn't have to resort to)
they instead put in another hack.

They could also implement UNIX ("advisory") file locking,instead of that
SHARE nonsense.
(and replace SHARE with REAL file security permissions)

That would be difficult, at best. I doubt that any one individual in the community can swing it.

Could a consortium do it?

Sort of reminds me of the time I had a 12-year old car to sell, back in 1967. I wanted $75 for it -- that's about what it was worth. A group of 10 teenagers were willing to chip in. Could you just see the squabbles over that car, had I sold it to them? At any rate, some of them chickened out.

I don't know.

If I have a clone and an Atari, and the clone isn't loaded to capacity,
why not let it serve the Atari? If, for example, I have to duplicate 35
newsletter disks every two months (two sides), and I can cut the time
somewhat by using the clone, I'll do it. If I want WWW access without
resorting to Lynx through GEnie or some other awkward arrangement, why not
let the clone serve as my slave? And if it finally happens that my Atari
equipment is beyond repair, why not let the clone emulate it?

I won't ever knock guys who use hard drives on their Atari systems. It's
a labor of love, and quite a bit of work. Most of the one's I've met are
sysops, and get an even greater measure of respect from me for that
endeavor. I never expected to need a hard drive for my Atari, but when
the clone came along, the SIO2PC was a natural. Now that I'm editing a
user group newsletter, it's invaluable.

You have to put the modes that you want to run in your XF86Config file
(usually in /etc or /etc/X11) By default, it is usually set up to run in
just 640x480, 800x600 and 1024x768.

Thats just what it's called. It's 256 colors and it uses 1 byte/ pixel so
it's easy to program for.

: Companies want to control their markets as best they can and controlling
: Atari programmers was the best way to do it. IBM also wanted to control
: their market, but tried to do so at a hardware level. Both companies
: failed miserably..... For Atari, it meant death. For IBM, it spawned a
: huge industry (just not theirs...). No nice guyz ever ran a billion
: dollar company.

The problem with the PC is that the BIOS was a joke.So people just
bypassed it so when new hardware came out,nothing worked with it.
If only graphical drivers came with MS-DOS (which allows you to
send/recieve more than one byte at a time),maybe programmers would've used
them.

Of course the PC wasn't made for games.So no P/M graphics or anything.

: : only" mode???

: That is correct. There is no way to get MS-DOS's old command.com
: to support long filenames. Only way to get long file names under dos
: is through a dos-window in win95. Thank MicroSoft for this one.

That's right!
And COMMAND can only access the long filenames because Microsoft modified
it to allow you to refer to a file by it's alias rather than it's filename.

It's as if everyone decided to keep a long descriptive name of a file in a
special file in each directory called DESCRIPT.ION.
Now,these new "long filename" programmes would look in this file to find
the name you specify,and use the REAL filename listed to access the file.

Of course in Windows 95,it's windows that does the alias-to-filename
conversion,and the aliases are stored in unused portions of the directory.
(now directories are even huger! It was bad enough all of them being 32
bytes long)

It goes without saying that Linux's way of storing filenames is much smaller.

Oh yeah,you'd think that a 30-character alias would take up one directory
(32-byte) entry.
(in aditions to the directory entry used to hold the filename)
But NO,only the part of the directory entry that would normally hold the
filename is used.Hence a 30 character alias would take 3 directory
entries,for a total of 4 for the file&alias.
Also,some (all?) aliases also have a dir-entry that holds information
about who created the file and so forth.So that'd bring the grand total up
to 5 dir-entries or 160 bytes.

You won't see the extra entries from normal MS-DOS because they have a
combination of attributes so strange that DOS refuses to believe it!

Why didn't they just implement NTFS?

: Friendly to the user, yes, but not the programmer.

: Reading the parts of the Reference Manual that are currently on the Web, I
: noticed how incomplete it was when compared to the Commodore manual, which
: gave complete hardware register information.

: The memory map on the Commodore programmer's reference manual was littered
: with things like (Bits 5-7: X offset) and (0=LOAD, 1=VERIFY). It even had
: a reasonably complete description of the 6502 instruction set, and walked
: a user through a few simple machine language concepts like branching and
: indexing. This kind of thing was also seen in the Vic-20 manual.

Well you don't want to explain what every little byte of the OSRAM means
or else programmes will access the OS internals and not work with new OSes.

Aren't you glad that we have access to Black Boxes and MIOs for RS232
ports rather than having to use a 850 interface clone.But if it were like
it is on the PC,you have to use a 850 or something identical since PC'ers
violate the OS constantly.Hence,everyone's stuck with the (relativaly)
slow RS232 port on the PC.And since there's no opening of devices to let
the multi-tasking OS know who's using what,multitasking is out the window,
so to speak.

In a free market, we can charge whatever we think is best. The net has increased demand enough for the few Atari dealers remaining in the world that business might be good. If someone thinks the prices are too high, buy from somewhere else. But don't hold a grudge against anyone trying to maximize income. That's the system here. Or maybe we need some kind of government controls on prices for Atari stuff? Give me a break...

$39? Really? A year or two ago, it was $29 there.

I suppose supplies are getting thin.

Maybe a disk drive with an Archiver chip is looking like a better
and better insurance policy...the death of two $39 disks can pay
for it...

Hey, I use an old 286 that I got for free!! sure it doesn't have the
largest of hard drives, but were talking ATARI here. And for me to get
and set up a real hard drive on my ATARI would be vitually impossible.
I live in Australia, and there isn't any ATARI vendors/shops that I
know of here, and I sure can't afford to pay for the postage of
whatever the ATARI needs to run one. I'm just saying that you don't
need to tie up your Pentium PC with ATARI gear, as older PC's are just
as good to run the SIO2PC software. A friend of mine just aquired a
386 PC, to which he attached the SIO2PC cable, and he's jumpin for joy
at what he's got...

He means that you will need to build (or beg/buy/borrow/steal....) an
SIO2PC cable, which enables your PC to act as ATARI disk drives. You
need to run either the SIO2PC or APE software on the PC, connect the
cable to the ATARI, and you have all the disk drives you could want
"emulated" from the PC. You then simply use the DOS Duplicate Disk
command to transfer an ATR image to a real disk- and your ATARI
doesn't know the difference from emulated or real drives. I use it
myself, and I would have to say that it's the best cable I've come
across so far for the ATARI- allowing Ultra speed (US doubler), 16mb
MyDOS disk images (GREAT for storing all those binary/basic files),
and also the ATARI can priint straight to the PC printer (I haven't
used this function as yet, no PC printer :( ). I hope this clears it
up a bit....

Steve.

I know not the people of which you speak, but as a business man myself,
I would suggest that the answer to your query lies in the question.

They charge what the market will bear, and in so doing maintain the
viability of their endeavour. Or to turn it the other way round, the
ones you like because they charge less disappear because in keeping
you happy they are themselves unviable in the long term.

>No, I meant 2400. I called Bob Puff and he said trying to exceed 2400
>would result in dropped characters.

For the record, I have transfered numerous files between my Atari and an
Amiga at 9600 baud using, on the Atari, an 850, a null-modem cable, and
Kermit65 software. I have never experienced dropped characters in this
configuration, and I conclude that the 850 "can" do 9600 when conditions
are "perfect."

On the other hand, I have never been able to get the SAME Atari-with-850-
and-Kermit65 configuration to even so much as establish command-mode
communication, with my ZOOM 14.4K modem -- which I normally use from the
Amiga at 9600.

So: take two computers (Amiga and Atari), set 'em up at 9600 so that
they'll communicate successfully with EACH OTHER, and it turns out that
the Amiga will talk to the ZOOM modem but the Atari will NOT -- WITHOUT
changing the modem settings between Amiga/Atari usages. Graphically:

```
_ MODEM _
doesn't _/ \_ works
work _/ \_
/ \
Atari -'\/\/\/\/\,- Amiga
works
```

This is strange, asymmetric, and as yet unexplained. Anybody care to
offer a theory as to why the third leg of the triangle is a no-go?

Brr. Speaking as a professional programmer of over ten years' industry experience, and another eight years' Atari fuddling before THAT, it chills me to the bone to hear you, Dan, holding out for "lazy programming." Most, if not all, of the more glaring problems in many, if not most, of today's platforms, OS's, and applications, came about as a result of PRECISELY the sort of "why-bother" attitude you espouse, and the resulting "sloppy programming" it leads to. Let's hope you don't have aspirations of ever releasing shareware, writing commercial software or, God forbid, designing operating systems. The world doesn't NEED another MS-DOS...

PRECISELY the sort of "why bother" attitude you espouse.

That's not to say that I don't UNDERSTAND your attitude! I, too, once felt that closing-channels-before-opening-them, and setting-variables-to-zero-which-are-just-going-to-be-obliterated-in-a-few-jiffies, etc., was a whole lot of unnecessary nitpicking. Then I started working in the Real World of programming, and discovered that if you DON'T get into the habit of doing that stuff, you end up spending 90% of your debugging time tracking down a problem that started life as an "uninitialized variable" somewhere! It CAN and WILL bite you, sooner or later.

The problem is that you CANNOT know, absolutely and precisely, what every statement and every routine is going to do under every condition that can arise in every environment where it might be used. And WITHOUT such

thorough knowledge it is just plain UNSAFE to assume that anyone else -- the long-ago creators of AtariBASIC, library-routine packages, various DOSes, or the Atari OS (to say nothing of MS-DOS, Windows, Windows95, et al!) is going to "catch you when you fall." They very often WON'T, and DON'T -- and then YOU look foolish!

So, go ahead and program without a net if you want to, but please don't inflict any of the resulting programs on ME/US out here!

Chris Chiesa

I was just going to say the same thing. There's no excuse for poor
cleanup in a piece of software, although most of the people producing OS's
and commercial applications don't seem to know that, judging from the
appalling behavior of certain products which shall remain nameless...

> >But ALL channels are closed when you RUN a programme,wtihout exception.

Interesting; I don't remember knowing this in my Atari-8bit career.

>And END,or simply running out of lines of execution also closes all files.

This either.

Have you read this somewhere, which would make it a "documented, intended
behavior," or is it merely an empirical observation, the result of your
own experience "in the field?" If the former, I'd love a reference as to
the book and page where the statement appears.

>: STATUS, I forgot if it returns a 0 or 1 on success. I think
>: it is a 1, so my code had another error. Initing variables
>
>The STATUS command is used to tell if a file was opened corectly,acording to
>my DOS manuals.

Interesting. Are we talking about the Atari BASIC "STATUS" _statement_,
or the STATUS I/O command supported by e.g. CIO? I've never seen ANY
useful documentation of EITHER of them, in any case; the closest I've ever
come to being able to use either of them, is that I've seen other people's
source code that issues one or the other, then PEEKs at certain memory
locations where "information is returned" from the device handler as a
result of the command. I'd love to know where any further, more useful
information appears: book? chapter? page?

Incidentally, under Atari DOS 2.0, and possibly 2.5, Atari BASIC's
"built-in" OPEN, GET, CLOSE etc. statements operate "exactly identically"
with the XIO equivalents of the corresponding CIO commands. Under

SpartaDOS X this is not true; there are discrepancies which, at the time I discovered them, I considered "bugs." I may have posted here about them; I definitely discussed them with the readership onboard Bob Puff's / CSS' "Computer World Jr." BBS. This was a few years back, though. I could probably find my code examples (BASIC) if anyone is interested, and if I can find the TIME to do so...

>(if you used a TRAP statement,your TRAP line would be "GOTOed" and it
>could simply PEEK to find the error code)

When using CIO you can also look at the first byte of the IOCB for the channel you're interested in; I believe a closed channel has a value of 255 in the first byte of its IOCB, whereas an open channel has the "device unit number" (e.g. a 1 if you opened D1:, 2 if you opened D2:, etc.) in it. (This is also useful in dynamically accessing files on "the same drive the program was loaded from," if you look at the IOCB DOS uses for binary-load operations; I forget what channel that is, but most of YOU probably know it...)

>I only use SpartaDOS X.I've always heard that disk SpartaDOS is buggy.

Half the problem IS that there are so many DOSes around, each of them presenting a just-slightly-different interface to the user / application-program...

I recently took one of my Atari's out to my parents house because if
you want to stay up all night playing video games, nothing beats the
8-bits. Anyway, I showed my brother Star Raiders. He is a junior in
High school, so at first he wasn't too impressed (too used to splashy
graphics!!) I got him started, and we played together for awhile, one
running the console, the other using the joystick. When I came back the
next day, he was actually playing it without any prodding from me!!
This is when I remarked on how the game was released the year he was
born. Somehow I doubt most of the games released in the last five years
will have the staying ability of a 17 year old game!!!

>the file as it was being download.

It would be relatively trivial to write an "alternate D: device handler"
which ignored the "filename" portion of the "device/file specification" at
OPEN time, and merely accessed the DEVICE ITSELF at the sector level.
With such a handler in place, you could use any existing binary-file-
transfer program to download XFD files directly -- and you could probably
also pretty easily provide a "XFD/ATR mode" switch command that would also
let you download ATR files directly, though you'd have to modify your
file-transfer programs slightly in order to issue the proper mode-switch
command before performing the download. (For the hacking-challenged, a
separate program could be used: you'd do something like

invoke mode-switch program to select the mode you wanted
invoke file-transfer/terminal program to download in selected mode
exit file-transfer/terminal program
invoke mode-switch program to switch modes
invoke file-transfer/terminal program to download in new mode
.
.
.

It occurs to me that there are some "slight complications" to this scheme.
In order to load-and-run the mode-switch and file-transfer/terminal
programs off a "normal" disk, while retaining the "alternate D device" for
downloading, some finesse would be necessary. One approach would be to
name the "alternate D device" something OTHER than "D". This would make
the alternate device unusable with any existing file-transfer progra that
hard-coded "D" as the destination device, and then you're back to having
to modify (at least one character of) the terminal program. Another
approach would be to provide an alternative version of just the WRITE
portion of the "D" device-handler, so that the modified "D" device could
READ-and-load programs from a "normal" disk, but download-and-WRITE a
"sector-by-sector" disk...

All in all, it _still_ doesn't seem as though it'd be particularly difficult to do; I wish I had time to work on it! Somebody else get on it, will ya? :-)

We are a new site on the internet and we can supply your
hardware needs. As a promotion to get our name out to you, we are
running a special promotion on 32Meg simms. For a very limited time,
we are selling 32Meg/70ns EDO simms for just 140+shipping and handling,
delivered to your door within 2-3 days.

Just go to our site www.bytewarecafe.com and fill out the necessary
information about yourself and your credit card information. Goto the
products list and choose the memory item. From here, select the memory
you want and click on the invoice button to see your total charges.

If you wish to browse the other hardware categories, feel free to browse for
as long as you wish. If you wish to buy anything else, just select that item
from that category.

If you are satisfied with your selection(s) and your personal information
is correct, click on the submit order button. The bytewarecafe.com
server will respond with an order number and a time stamp. You will
need these two numbers for any future correspondences with bytewarecafe.com

Your order will be prepared and delivered to your door within 2-3 days.

Thank you.

Three engineers were riding in a car: a mechanical engineer, a chemical engineer, and a Microsoft software engineer. The car stalled, and they rolled it to the side of the road.
The mechanical engineer popped the hood, looked is and said "Look. The drive belt is loose. All we have to do is tighten it up and the car will work just fine."
The chemical engineer replied "No, that's all wrong. The problem is fuel contamination. We have to drain the fuel, filter it, and then everything will be A-OK."
The Microsoft software engineer told the other two "No, I've seen this problem before. We have to get back in the car, close all the windows, shut down the car, get out, get back in, start up the car, open all the windows, and then it will run."

5195. What are the difficulties in "ATR to DCM"?

Newsgroup: comp.sys.atari.8bit
Date: 1996-12-31 00:00:00 UTC
From: ziggy29@netgate.net
Message-ID: <ziggy29-ya023080003112961333030001@nntp.netgate.net>
Source record: 77415

I've seen utilities which can take a disk in DCM format and make it into an ATR or XFD for use with emulators.

I have a real 8-bit here, and I'd love to take some of the ATRs I see and turn them into DCMs, with which I can apply Diskcomm 3 to create a disk.

Is the process of changing DCMs into ATRs a one-way street? I'd think that if it were easy to convert in the other direction, it would be done by now, but I haven't seen it.

Preferably, if such an animal exists, there would be a Unix and/or Mac flavor as well as the obligatory Wintel version. (We don't all have Wintel boxes which can run SIO2PC or anything like that, y'know).

Anyone know of such a beast?

I have the same problem CONTINUOUSLY at this end: MY particular problem appears to be that my ISP is woefully undersupplied with disk space for the number of newsgroups they try to carry, so they adjust by setting article-retention times REALLY SHORT. Like, a day or less, from what I can tell! If I'm sick, or I go out of town for the weekend, or I just don't get online EVERY STINKIN' DAY :-), I miss entire threads and don't even see my OWN posts coming back.

> >Did anybody read my messages about Mac/65, Zybex and BBK?

_I_ sure didn't, but that's not saying much. I do know some about Mac/65, and I play Zybex now and then, so maybe you should repeat yourself, maybe even via e-mail... :-)

>proportion of rubbish being passed off as "games". Yet there seems to
>be a common belief that games in years past were somehow better, purer
>etc etc. Where does such a view come from?

First off, SF writer Theodore Sturgeon long ago put forth "Sturgeon's Law," which, roughly stated, says, "99% of everything is crap." Don't be misled by looking back on old games "en masse;" those of us who were there at the time KNEW that 99% of 'em were crap -- but the 1% that WEREN'T, are what form our fond memories of those days.

Second, at the time, home computers were "new and different," therefore much more exciting, in and of themselves, than home computers today. Today every Tom, Dick, and his mother has a computer at home, and they treat it like an appliance; in the heyday of the Atari 8-bit, only the GODS had computers, and you considered yourself blessed if you, a mere human, ended up with one.

Third, when you DID spend time with one, since you were anything-BUT-blase' about the computer, you were insanely interested in how the damned thing could possibly DO what it did: there was, quite simply, no precedent for a little box that could sit there and in a few keystrokes fill your TV screen with programming -- meaning, "a TV program" -- that YOU could choose at will, and -- oh, my God -- INTERACT with through the medium of the joystick/paddle/keyboard. So when you heard, through the grapevine or wherever, that these things were, in reality, "simple" enough that one lone programmer could sit down and bang out an entire game, you got motivated to do that too, and then you became capable of appreciating the work and artistry that went into the TRULY outstanding efforts. So if you're a non-programmer, or even a non-Atari-8-bit programmer, think twice before you criticize: some of what YOU may think is "dire," may in fact be "pushing the limits" of what the machines can do, and is/was impressive, in its time, on those grounds alone...

Fourth, one chronic complaint, then and now, has been that of imitators vs innovators. A brilliant mind invented Space Invaders; a thousand mediocre minds knocked off cheap imitations with minor variations. Another

brilliant mind invented Pac-Man, and TEN thousand mediocre minds knocked off imitations with even FEWER variations (John Harris is to be excused because his INTENTION was to reproduce the ORIGINAL Pac-Man on the Atari 8-bit). Centipede. BallBlazer. SpinDizzy (well, okay, Marble Madness; by the time MM came out (and I discovered SD), original games from OTHER platforms were in a position to "inspire" imitations, or ports, onto the Atari 8-bit). I know _I_ could never have come up with the ORIGINAL IDEAS of some of the classic or "landmark" games. Could YOU? My point is that we all look at the old games as being "great" and "classic" and all, because that is where the ORIGINAL implementations of many acknowledged classic game-themes first appeared! Maze games. Side-scrolling shooters. First-person-POV split-screen simulators. We had 'em ALL, and we had 'em at a time when NOBODY ELSE HAD EVER SEEN THEM.

Finally, it's interesting that you mention "closure." presume you're speaking of the notion that one can "win" or "finish" a (video/computer) game. Personally, I find that notion to be a relatively latecoming, and not entirely welcome, one. I always took for granted that videogames "went on forever," getting progressively more difficult until the individual player reached the limit of his competence -- so that a player's "all-time high score" was a more-or-less "absolute" measure of his skill at a particular game, relative to all other players of that same game. A high score actually MEANT something. It never even OCCURRED to me that a videogame might have an "end" somewhere! And when the concept started becoming common, between six and eight years ago as I reckon it, I did NOT LIKE it! To this day I consider a "finite," "winnable" videogame a ripoff: I paid (a quarter then; probably fifty cents or more today -- or multi-dollars for a home game) for an INFINITELY playable game, not some knockoff that any ten-year-old can "beat" in a half-hour and have no further interest in. "Finishable," "winnable," "beatable" games, IMHO, have always been nothing more than a gimmick for increasing the income of the videogame manufacturer: "make the game winnable, so they'll get tired of it and buy ANOTHER game!" For shame; videogames were meant to be infinite! As for "gameplay" and "UI issues," would you care to be more specific? I for one would love to know what you consider "dire" examples in those areas. I suspect that YOUR notions of "gameplay" and "UI issues" may turn out to be luxuries affordable in this day of 32- and 64-bit systems, but may have been impossible in the day of the classic game. I certainly never felt that any of the classic games were poorly playable, or had poor UI's, at the time!

: I'm able to boot to the selection menu on the Mydos ATR file, but it does
: so very slowly compared to when I run it from DOS. When it loads
: further, it just seems to hang at some point.

If there's one good thing about DOS, it's that it never interrupts
you. Linux, being a pre-emptive multitasker, will. So dosemu gets
interrupted while the kernel lets other programs do other stuff and APE
is thrown off because of that. The slowness and hangs are symptoms of
this.

There's no way to get around this with a standard kernel, but there's a
real-time version at http://luz.cs.nmt.edu/~rtlinux which treats the kernel
like a process and schedules it like any other; this way, other processes
can be set to a higher priority so that they're not interrupted (unless
they've found a more elegant solution). If you ran that kernel and set
dosemu to the highest priority, it shouldn't have any problems.

: 320x480 or anything like that.

I've run XFree86 (3.1.2 & 3.2) in 320x200 and a bunch of extended VGA
modes (i.e., 320x400, 320x480, etc.).

: (I assume DOOM runs at 320x480 or some other vertical resolution.Doesn't
: DOOM run on a normal VGA card?(VGA doesn't do 640x480x256))

Mode X, 320x200.

: Of course I have no idea how to make it run with a bigger window.

You shrink the resolution. I think that's shift + and shift -, but
it's been a while since I've run X.

: I remember always using sdoom (non-X) instead of xdoom though.

Yeah, it works better. I wish that Linus wasn't such an X bigot,
though---then we might have an svgalib Quake instead of just an X one
(And GGI, too).

Not sure what "hardware manual" you mean. There is a hardware manual
in the Tech Ref Notes set that you can purchase from best electronics.

went out on there own to release it.

: : Atari 800 carts. I don't think consumers can get this. All they know is
: : Atari or Sega or Nintendo. If you have more than two incompatible cartridges
: : on the shelves at Toys R Us they're just confused all to hell.

: Oh please,I can't believe that someone would buy a 5200 cartridge for
: their 2600.Now I could belive 7800 for their 2600 since they look identical.
: Of course if they got it in the box,then there's no excuse.

Wrong... I see kids and parents all the time trying to buy SNES games
for their "sega" (genesis) system. I even see people purchasing the wrong
cd game for their system because they think a cd is a cd.

Also, we are talking about a rectangle box that says "ATARI" on it.
ATARI=2600. Always has (to most of the public anyways). No parent or kid
really looks at the fine print.

I think they should go after all the PORNO stuff first, and we all
should send a letters to our comgressman telling him to do so.

Or yet even better:

** Click here to ENTER Cyber Prono! **
Would send you to Congress!

and:

** Click Here if under 18 years old **

sends you to Jellystone!

Ok get the drift? How can you copywrite SD0001.JPG ?

and somebody is making lots of cash with that file to!

>via null modem to your Atari.

I have either this program or one similar to it, but I don't want to pull files
out. I looking mostly to restore boot disks back to an Atari disk.

> Another Way: Usine SIO2PC or APE, simply copy the file from the
.ATR
>or .XFD image to the Atari disk. Obviously the better way if both
>machines are near each other. The former way is a bit more complicated,

Will these programs write to an Atari floppy on the PC? I looked at them, and
it
didn't seem that they did.

Well, thanks again, I hope to get this figured out sooner or later...

The CGS Color system is fast as hell, you probley was using a slow modem or somthing, even at 2400 bauds CGS FLEW. Its the Atari 8bit version of the RIP Xlation. It dosnt send the Graphics over the phone just small pacs of info - and the Magic unfolds -
